

GEDIT3 Error when using AutoCAD, AutoCAD LT and Carlson Stand Alone products.

This error is usually caused by a Trojan or other virus on the computer. Update your virus scan application and run a full system scan. You can also try spyware and/or adware removal programs to eliminate all possible threats to your system.

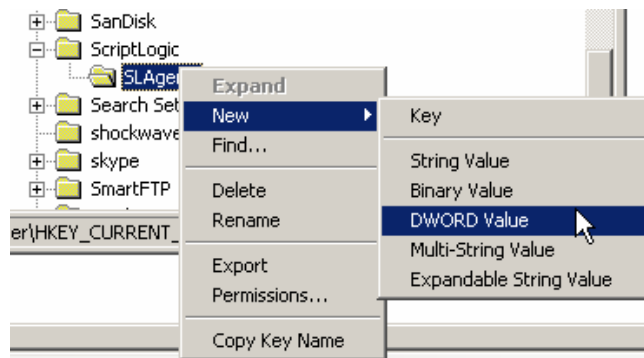

This is not the only thing that can cause the GEDIT 3 Error, in a few cases customers were running various versions of ScriptLogic and Desktop Authority. If the virus scan does not resolve the issue or if you know you are running ScriptLogic or Desktop Authority you can do the following to resolve the issue.

Launch Regedit by going to RUN and typing the command REGEDIT.

Go to:
HKEY_CURRENT_USER
Software
ScriptLogic
SLAgent

Right-Click on SLAgent and create a new DWORD VALUE named NoAPIHooking

Double Click the Value you just added and change the Value Data variable to 1
