Safety

In this chapter:

- Introduction
- Warnings and Cautions
- Laser Safety

Introduction

For your safety, read this instruction manual carefully and thoroughly before using the Total Station Nivo series. Although Nikon products are designed for maximum safety, using them incorrectly or disregarding the instructions can cause personal injury or property damage.

You should also read the documentation for any other equipment that you use with a Nivo series instrument.

Note – Always keep the manual near the instrument for easy reference.

Warnings and Cautions

The following conventions are used to indicate safety instructions:

WARNING – Warnings alert you to situations that could cause death or serious injury.

CAUTION – Cautions alert you to situations that could cause injury or property damage.

Always read and follow the instructions carefully.

Warnings

Before using the instrument, read the following warnings and follow the instructions that they provide:

WARNING – Never look at the sun through the telescope. If you do, you may damage or lose your eyesight.

WARNING – Nivo series instruments are not designed to be explosion-proof. Do not use the instrument in coal mines, in areas contaminated with coal dust, or near other flammable substances.

WARNING – Never disassemble, modify, or repair the instrument yourself. If you do, you may receive electric shocks or burns, or the instrument may catch fire. You may also impair the accuracy of the instrument.

WARNING – Use *only* the battery charger and AC adapter that are supplied with the instrument. Do *not* use any other charger or you may cause the battery pack to catch fire or rupture.

⚠ **WARNING –** Do not cover the battery charger and AC adapter while the battery pack is being recharged. The charger must be able to dissipate heat adequately. Coverings such as blankets or clothing can cause the charger to overheat.

⚠ **WARNING –** Avoid recharging the battery pack in humid or dusty places, in direct sunlight, or near heat sources. Do not recharge the battery pack when it is wet. If you do, you may receive electric shocks or burns, or the battery pack may overheat or catch fire.

⚠ **WARNING –** Although the battery pack has an auto-reset circuit breaker, you should take care not to short circuit the contacts. Short circuits can cause the battery pack to catch fire or burn you.

⚠ **WARNING –** Never burn or heat the battery. Doing so may cause the battery to leak or rupture. A leaking or ruptured battery can cause serious injury.

⚠ **WARNING –** Before storing the battery pack or battery charger, cover the contact points with insulation tape. If you do not cover the contact points, the battery pack or charger may short circuit, causing fire, burns, or damage to the instrument.

⚠ **WARNING –** The battery is not itself waterproof. Do not get the battery wet when it is removed from the instrument. If water seeps into the battery, it may cause a fire or burns.

Cautions

Before using the instrument, read the following cautions and follow the instructions that they provide:

⚠ **CAUTION –** Use of controls, adjustments, or performance of procedures other than those specified herein may result in hazardous radiation exposure.

⚠ **CAUTION –** The tops of the tripod ferrules are very sharp. When handling or carrying the tripod, take care to avoid injuring yourself on the ferrules.

⚠ **CAUTION –** Before carrying the tripod or the instrument in the carrying case, check the shoulder strap and its clasp. If the strap is damaged or the clasp is not securely fastened, the carrying case may fall, causing personal injury or instrument damage.

⚠ **CAUTION –** Before setting up the tripod, make sure that no-one's hands or feet are underneath it. When the legs of the tripod are being driven into the ground, they could pierce hands or feet.

CAUTION – After mounting the instrument on the tripod, securely fasten the thumb screws on the tripod legs. If the thumb screws are not securely fastened, the tripod may collapse, causing personal injury or instrument damage.

CAUTION – After mounting the instrument on the tripod, securely fasten the clamp screw on the tripod. If the clamp screw is not securely fastened, the instrument may fall off the tripod, causing personal injury or instrument damage.

CAUTION – Securely fasten the tribrach clamp knob. If the knob is not securely fastened, the tribrach may come loose or fall off when you lift the instrument, causing personal injury or instrument damage.

CAUTION – Do not stack objects on the plastic carrying case, or use it as a stool. The plastic carrying case is unstable and its surface is slippery. Stacking or sitting on the plastic carrying case may cause personal injury or instrument damage.

CAUTION – The system in the instrument may stop functioning in order to avoid any errors in measurement when the instrument detects strong electromagnetic wave(s). If this is the case, turn off the instrument and remove the source of the electromagnetic wave(s). Then turn on the instrument to resume the work.

Rechargeable Lithium-ion (Li-ion) batteries

WARNING – Do not damage the rechargeable Lithium-ion battery. A damaged battery can cause an explosion or fire, and can result in personal injury and/or property damage.
To prevent injury or damage:
– Do not use or charge the battery if it appears to be damaged. Signs of damage include, but are not limited to, discoloration, warping, and leaking battery fluid.
– Do not expose the battery to fire, high temperature, or direct sunlight.
– Do not immerse the battery in water.
– Do not use or store the battery inside a vehicle during hot weather.
– Do not drop or puncture the battery.
– Do not open the battery or short-circuit its contacts.

WARNING – Avoid contact with the rechargeable Lithium-ion battery if it appears to be leaking. Battery fluid is corrosive, and contact with it can result in personal injury and/or property damage.
To prevent injury or damage:
– If the battery leaks, avoid contact with the battery fluid.
– If battery fluid gets into your eyes, immediately rinse your eyes with clean water and seek medical attention. Do not rub your eyes!
– If battery fluid gets onto your skin or clothing, immediately use clean water to wash off the battery fluid.

⚠ **WARNING –** Charge and use the rechargeable Lithium-ion battery only in strict accordance with the instructions. Charging or using the battery in unauthorized equipment can cause an explosion or fire, and can result in personal injury and/or equipment damage.
To prevent injury or damage:
– Do not charge or use the battery if it appears to be damaged or leaking.
– Charge the Lithium-ion battery only in a product that is specified to charge it. Be sure to follow all instructions that are provided with the battery charger.
– Discontinue charging a battery that gives off extreme heat or a burning odor.
– Use the battery only in equipment that is specified to use it.
– Use the battery only for its intended use and according to the instructions in the product documentation.

Laser Safety

The Nivo series is a Class 2 laser instrument.

Nivo Series is a Class 2 Laser Product in accordance with: IEC60825-1, Am2 (2001): "Safety of Laser Products"

Precautions: To counteract hazards, it is essential for all users to pay careful attention to the safety precautions and control measures specified in the standard IEC60825-1 (2001-08) resp. EN60825-1:1994 + A11:1996 + A2:2001, within the *hazard distance* *); particularly on to "User's Guide".

⚠ **WARNING –** Only qualified and trained persons should be assigned to install, adjust and operate the laser equipment.

⚠ **WARNING –** Precautions should be taken to ensure that persons do not look directly, with or without an optical instrument, into the beam.

⚠ **WARNING –** Laser beam path should be located well above or below eye level wherever practicable.

Table 1.1   Specifications for laser emission

Laser pointer	
Wave length	630-680 nm
Output power	CW Po ≤ 1 mW
Disatance meter	
Wave length	850-890 nm
Output power	Pulse Po ≤ 6.4 W
Pulse width	< 5 ns
Laser plummet (Option)	
Wave length	635 nm
Output power	CW Po < 1.0 mW

Contents

Introduction

In this chapter:

- Welcome
- Parts of the Instrument
- Maintenance

Welcome

Thank you for purchasing this Nikon product.

This instruction manual was written for the users of Total Station Nivo series instruments. Before you operate a Nivo series instrument, read this manual carefully. In particular, pay attention to the warnings and cautions that appear in the Safety section at the front of the manual. Before you begin, you should also read the maintenance instructions. For more information, see .

Parts of the Instrument

Figure 1.1 and Figure 1.2 show the main parts of the Nivo series instrument.

Carrying handle

Optical sight (Finder)

Telescope focusing ring

Telescope eyepiece

Diopter ring

Reticle plate cover

Face-1 display / keyboard

The label shown below is attached to the underside of the keyboard.

Horizontal axis indication mark

Vertical tangent screw

Battery box

Battery box release knob

Upper plate tangent screw

The Laser Safety Label shown below is attached to the underside of the keyboard

Tribrach clamp knob

Maintenance

Before using the instrument, read and follow the following maintenance instructions:

- Do not leave the instrument in direct sunlight or in a closed vehicle for prolonged periods. Overheating the instrument may reduce its efficiency.

- If the Nivo series instrument has been used in wet conditions, immediately wipe off any moisture and dry the instrument completely before returning the instrument to the carrying case. The instrument contains sensitive electronic assemblies which have been well protected against dust and moisture. However, if dust or moisture gets into the instrument, severe damage could result.

- Sudden changes in temperature may cloud the lenses and drastically reduce the measurable distance, or cause an electrical system failure. If there has been a sudden change in temperature, leave the instrument in a closed carrying case in a warm location until the temperature of the instrument returns to room temperature.

- Do not store the Nivo series instrument in hot or humid locations. In particular, you must store the battery pack in a dry location at a temperature of less than 30 °C (86 °F). High temperature or excessive humidity can cause mold to grow on the lenses. It can also cause the electronic assemblies to deteriorate, and so lead to instrument failure.

- Store the battery pack with the battery discharged.

- When storing the instrument in areas subject to extremely low temperatures, leave the carrying case open.

- When adjusting the leveling screws, stay as close as possible to the center of each screw's range. The center is indicated by a line on the screw.

- If the tribrach will not be used for an extended period, lock down the tribrach clamp knob and tighten its safety screw.

- Do not use organic solvents (such as ether or paint thinner) to clean the non-metallic parts of the instrument (such as the keyboard) or the painted or printed surfaces. Doing so could result in discoloration of the surface, or in peeling of printed characters. Clean these parts only with a soft cloth or a tissue, lightly moistened with water or a mild detergent.

- To clean the optical lenses, lightly wipe them with a soft cloth or a lens tissue that is moistened with alcohol.

- The reticle plate cover has been correctly mounted. Do not release it or subject it to excessive force to make it watertight.

- Before attaching the battery pack, check that the contact surfaces on the battery and instrument are clean.

- Securely press the cap that covers the data output/external power input connector terminal. The instrument is not watertight if the cap is not attached securely, or when the data output/external power input connector is used.

Reticle plate cover

- The carrying case is designed to be watertight, but you should not leave it exposed to rain for an extended period. If exposure to rain is unavoidable, make sure that the carrying case is placed with the Nikon nameplate facing upward.

- The battery pack contains a Lithium-ion battery. When disposing of the battery pack, follow the laws or rules of your municipal waste system.

- The instrument can be damaged by static electricity from the human body discharged through the data output/external power input connector. Before handling the instrument, touch any other conductive material once to remove static electricity.

- Be careful not to pinch your finger between the telescope and trunnion of the instrument.
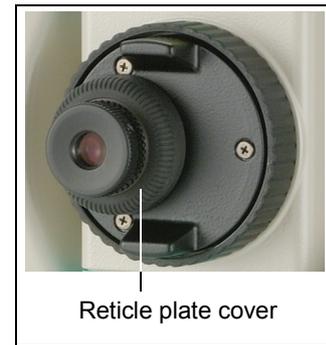

Preparation

In this chapter:

- ■ Unpacking and Packing the Instrument
- ■ Charging the Battery Pack
- ■ Detaching and Re-Attaching the Battery Pack
- ■ Setting Up the Tripod
- ■ Centering
- ■ Leveling
- ■ Sighting
- ■ Setting the Measurement Mode and Preparing the Target
- ■ Measurement in Reflectorless mode
- ■ Preparing the Reflector Sheet
- ■ Setting Up the Prism Reflector

Unpacking and Packing the Instrument

Note – Handle the Nivo series instrument gently to protect it from shocks and excessive vibration.

Unpacking

To unpack the instrument, grip the carrying handle and gently remove the instrument from the carrying case.

Packing

To pack the instrument back into the carrying case, please refer to the figure on the right.

Charging the Battery Pack

Before charging the battery pack, read the warnings (also listed in the Safety section at the front of this manual) and the following notes.

⚠ **WARNING –** Do not damage the rechargeable Lithium-ion battery. A damaged battery can cause an explosion or fire, and can result in personal injury and/or property damage.
To prevent injury or damage:
– Do not use or charge the battery if it appears to be damaged. Signs of damage include, but are not limited to, discoloration, warping, and leaking battery fluid.
– Do not expose the battery to fire, high temperature, or direct sunlight.
– Do not immerse the battery in water.
– Do not use or store the battery inside a vehicle during hot weather.
– Do not drop or puncture the battery.
– Do not open the battery or short-circuit its contacts.

⚠ **WARNING –** Avoid contact with the rechargeable Lithium-ion battery if it appears to be leaking. Battery fluid is corrosive, and contact with it can result in personal injury and/or property damage.
To prevent injury or damage:
– If the battery leaks, avoid contact with the battery fluid.
– If battery fluid gets into your eyes, immediately rinse your eyes with clean water and seek medical attention. Do not rub your eyes!
– If battery fluid gets onto your skin or clothing, immediately use clean water to wash off the battery fluid.

⚠ **WARNING –** Charge and use the rechargeable Lithium-ion battery only in strict accordance with the instructions. Charging or using the battery in unauthorized equipment can cause an explosion or fire, and can result in personal injury and/or equipment damage.
To prevent injury or damage:
– Do not charge or use the battery if it appears to be damaged or leaking.
– Charge the Lithium-ion battery only in a product that is specified to charge it. Be sure to follow all instructions that are provided with the battery charger.
– Discontinue charging a battery that gives off extreme heat or a burning odor.
– Use the battery only in equipment that is specified to use it.
– Use the battery only for its intended use and according to the instructions in the product documentation.

⚠ **WARNING –** To charge the battery pack, use only the battery charger and AC adapter that are supplied with the instrument. Do NOT use any other charger or you may cause the battery pack to catch fire or rupture. The enclosed battery pack cannot be used with other chargers.

⚠ **WARNING –** Do not cover the battery charger and AC adapter while the battery pack is being recharged. The charger must be able to dissipate heat adequately. Coverings such as blankets or clothing can cause the charger to overheat.

⚠ **WARNING –** Avoid recharging the battery pack in humid or dusty places, in direct sunlight, or near heat sources. Do not recharge the battery pack when it is wet. If you do, you may receive electric shocks or burns, or the battery pack may overheat or catch fire.

⚠ **WARNING –** Although the battery pack has an auto-reset circuit breaker, you should take care not to short circuit the contacts. Short circuits can cause the battery pack to catch fire or burn you.

⚠ **WARNING –** Never burn or heat the battery. Doing so may cause the battery to leak or rupture. A leaking or ruptured battery can cause serious injury.

⚠ **WARNING –** Before storing the battery pack or battery charger, cover the contact points with insulation tape. If you do not cover the contact points, the battery pack or charger may short circuit, causing fire, burns, or damage to the instrument.

⚠ **WARNING –** The battery is not itself waterproof. Do not get the battery wet when it is removed from the instrument. If water seeps into the battery, it may cause a fire or burns.

Power jack

This will read 5V, 4A

Charge indicator 0

Calibration indicator 0

Calibration button

Case "Top" edge

Calibration indicator 1

Charge indicator 1

Battery Slot 0

Battery Slot 1

Applying Power

- Plug in the charger to the supplied AC adapter to turn the unit on. The power input must be 5 V with at least 4 A of current capability. Each battery may take up to 2 A while charging.

Charging a battery

- Simply slide a battery into either battery slot to begin charging. The adjacent charge indicator will illuminate yellow when charging is in progress. The charge indicator will change to green when charging is complete.

- Charger slots are completely independent so a battery may be inserted regardless of the state of the other battery slot.

- Charging may take 2-4 hours if the battery was normally discharged.

- Charging may take up to 5 hours with a completely drained battery which has been stored for several months without use.

- By design Li-Ion batteries should not be charged above 40 °C-45 °C so a blinking charge light may mean the batteries are too hot for charging. Charging will resume after the batteries cool down. The charging time will be longer due to the batteries cool down when charging batteries above 40 °C-45 °C.

- If the charge indicator(s) are blinking and the batteries feel cool, it may indicate a problem with the battery or the charger. If the charge light is still blinking after trying several batteries which are not warm, there is a problem with the unit or the batteries themselves.

Conditioning / calibrating a battery

- Battery calibration is necessary about once every 6 months or more often if desired. Calibration insures the reported battery charge remaining is accurate.

- Hold down the calibration button on the unit and then insert a battery while holding the calibration button to begin a battery calibration. Only the battery which was inserted while the button was depressed will begin calibration. During a battery calibration the battery will be charged, discharged completely, and then recharged before finishing. Calibration should complete in roughly 17 hours and the charger vents should not be covered during a calibration cycle.

- The blue calibration indicator light(s) will blink slowly (on 1.5 sec, off 2 sec) while a calibration is in progress and the charge light(s) may be on or off during the calibration cycle.

- When a calibration cycle is completed, the calibration light will stop blinking remain on until the corresponding battery is removed.

- The bottom case temperature may continue to climb up to approximately 43 °C before temperature regulation is enabled to keep the case from getting warmer. As the battery voltage drops, the case will cool down and the automatic temperature limiting will no longer be necessary which minimizes the time it takes to discharge a battery.

- If the case temperature continues to get too hot internally even after temperature regulation is enabled, there is a secondary failsafe which will abort the calibration completely. If an abort occurs, the calibration light(s) will blink rapidly and battery charging will be re-enabled.

Detaching and Re-Attaching the Battery Pack

Detaching the battery pack

⚠ **CAUTION –** Avoid touching the contacts on the battery pack.

1. If the instrument is turned on, press ⃞PWR⃞ to turn it off.

2. Turn the battery box release knob counterclockwise, open the battery box cover and remove the battery pack from the battery box.

Inserting the battery pack

Before inserting the battery pack, clear any dust or other foreign particles from the battery contacts.
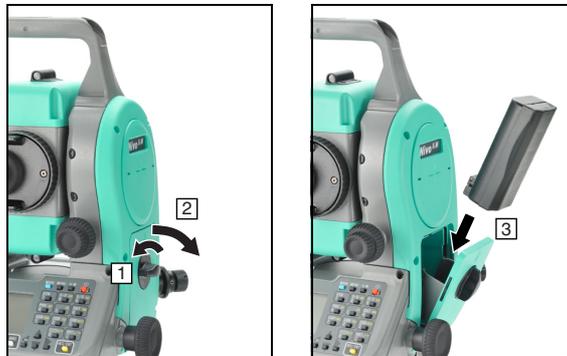

1. Turn the battery box release knob counterclockwise and open the battery box cover.

2. Put the battery pack into the battery box. Insert the battery pack with the connectors bottom first, facing inside.

3. Close the battery box cover and turn the knob clockwise until the secure click sound is heard.

⚠ **CAUTION –** If the battery box cover is not closed, this could adversely affect the watertightness of the instrument.

Setting Up the Tripod

⚠ **CAUTION –** The tops of the tripod ferrules are very sharp. When handling or carrying the tripod, take care to avoid injuring yourself on the ferrules.

1. Open the tripod legs enough to for the instrument to be stable.

2. Locate the tripod directly over the station point. To check the tripod's position, look through the center hole in the tripod head.

3. Firmly press the tripod ferrules into the ground.

4. Level the top surface of the tripod head.

5. Securely fasten the thumb screws on the tripod legs.

6. Place the instrument on the tripod head.

7. Insert the tripod mounting screw into the center hole of the base plate of the instrument.

8. Tighten the tripod mounting screw.

Note – Do not carry the instrument while it is attached to a tripod.

Centering

When you center the instrument, you align its central axis precisely over the station point. To center the instrument, you can either use the optical plummet or a plumb bob.

Centering using the optical plummet

Note – If you require high accuracy, check and adjust the optical plummet before you center the instrument. For detailed instructions, see Checking and Adjusting the Optical/Laser Plummet, page 136.

To center the instrument using the optical plummet:

1. Set up the instrument on the tripod. For detailed instructions, see .

2. While looking through the optical plummet, align the reticle with the station point. To do this, turn the leveling screws until the center mark ⊕ of the reticle is directly over the image of the station point.

3. While supporting the tripod head with one hand, loosen the tripod leg clamps and adjust the lengths of the legs until the air bubble is in the center of the circular level.

4. Tighten the tripod leg clamps.
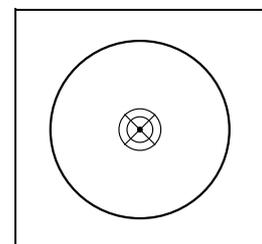

5. Use the electronic level to level the instrument. For detailed instructions, see Leveling, page 15.

6. Look through the optical plummet to check that the image of the station point is still in the center of the reticle mark.

7. If the station point is off center, do one of the following:

    – If the station point is slightly off center, loosen the tripod mounting screw and then center the instrument on the tripod. Use only direct movement to center the instrument. Do not rotate it.

      When the instrument is centered, tighten the mounting screw.

    – If the displacement of the station point is major, repeat this procedure from Step 2.

Centering using the laser plummet

Note – Do NOT look into the laser directly.

Note – If you require high accuracy, check and adjust the laser plummet before you center the instrument. For detailed instructions, see Checking and Adjusting the Optical/Laser Plummet, page 136.

1. Set up the instrument on the tripod. For detailed instructions, see Setting Up the Tripod, page 13.

2. Turn on the laser plummet. See Laser plummet ON/OFF, page 36.

3. Align the laser pointer to the station point. To do this, turn the leveling screws until the laser pointer is over the station point.

4. While supporting the tripod head with one hand, loosen the tripod leg clamps and adjust the lengths or the legs until the air bubble is the center of the circular level.

5. Tighten the tripod leg clamps.

6. Use the electronic level to level the instrument. For detailed instructions, see Leveling, page 15.

7. Check the laser pointer is over the station point.

8. If the station point is off center, do one of the following:

    – If the station point is slightly off center, loosen the tripod mounting screw and then center the instrument on the tripod. Use only direct movement to center the instrument. Do not rotate it.

    – When the instrument is centered, tighten the mounting screw.

    – If the displacement of the station point is major, repeat this procedure from Step 2

Centering using a plumb bob

1. Set up the instrument on the tripod. For detailed instructions, see Setting Up the Tripod, page 13.

2. Hang the plumb line on the hook of the tripod mounting screw.

3. Adjust the length of the plumb line so that the tip of the plumb bob is at the height of the station point.

4. Loosen the tripod mounting screw slightly.

5. Using both hands to support the outer side of the tribrach, carefully slide the instrument about on the tripod head until the tip of the plumb bob is positioned over the exact center of the station point.

Note – *To confirm that the instrument is precisely aligned, check its position from two directions at right angles to each other.*

Leveling

When you level the instrument, you make the vertical axis of the instrument exactly vertical. To level the instrument, use the electronic level. In the leveling work, always set the instrument in face 1 direction (please refer to the Fig.1.1 in page 3).

To level the instrument:

1. Move the bubble into the circle drawn on the circular level and then turn on the power.

2. Rotate the alidade until the bottom edge of the keyboard panel is parallel to the two of the leveling screws (B and C).

3. Use leveling screws B and C to move the bubble into the center of the electronic level.

4. Rotate the alidade approximately 90°.

5. Use leveling screw A to move the bubble into the center of the electronic level.

6. Repeat Step 1 through Step 5 to center the bubble in both positions.

7. Rotate the alidade 180°.

8. If the bubble in the electronic level remains centered, the instrument is level. If the bubble moves off center, adjust the electronic level. For detailed instructions, see Adjusting the Electronic Level, page 136.

① Bottom edge of the keyboard panel

② Bottom edge of the keyboard panel
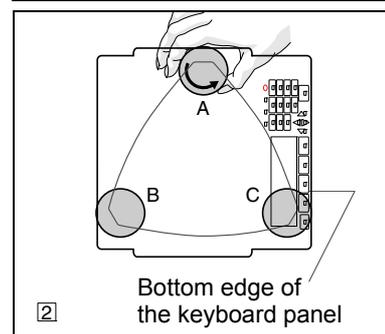

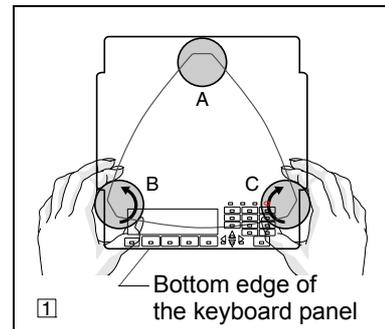

Sighting

When you sight the instrument, you aim the telescope at the target, bring the target image into focus, and align the image with the center crosshairs of the reticle.

Center crosshairs

To sight the instrument:

1. Adjust the diopter:

    a. Aim the telescope at a blank area, such as the sky or a piece of paper.
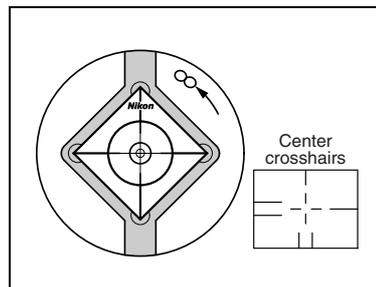

⚠ **WARNING –** Never look at the sun through the telescope. If you do, you may damage or lose your eyesight.

    b. Looking through the eyepiece, rotate the diopter ring until the reticle crosshairs are in sharp focus.

2. Eliminate parallax:

    a. Aim the telescope at the target image.

    b. Rotate the focusing ring until the target image is in sharp focus on the reticle crosshairs.

Diopter ring   Telescope focusing ring

    c. Move your eye vertically and laterally to check whether the target image moves relative to the reticle crosshairs.
        If the target image does not move, there is no parallax.

    d. If the target image does move, rotate the telescope focusing ring. Then repeat from Step c.

3. Rotate the tangent screw:

    –   The final turn of the tangent screw should be in a *clockwise* directions, to align the target accurately on the center crosshairs.

Setting the Measurement Mode and Preparing the Target

The Nivo series has two measurement modes: Prism mode (Pɾiꜱm) and Reflectorless mode (N-Pɾiꜱm). These modes can be changed at any time by holding down the MSR1 or MSR2 key for one second. For more information, see Measurement settings, page 48.

To set the measurement mode depending on the target you want to measure, see the following table.

Target	Target setting
Prism, reflector sheet	Prism (Prism mode)
Other (reflective materials)	N-Prism (Reflectorless mode)

In some cases, you can measure another target that is not appropriate to the set measurement mode.

Note – The Nivo series is Laser Class 1 in the measurement function, and Laser Class 2 in the Laser pointer function.
Don't sight the Prism when the Laser Pointer is on.

Measurement with a prism

Do not use a prism with scratches, a dirty surface, or a chipped center. Prisms with thin edges are recommended.
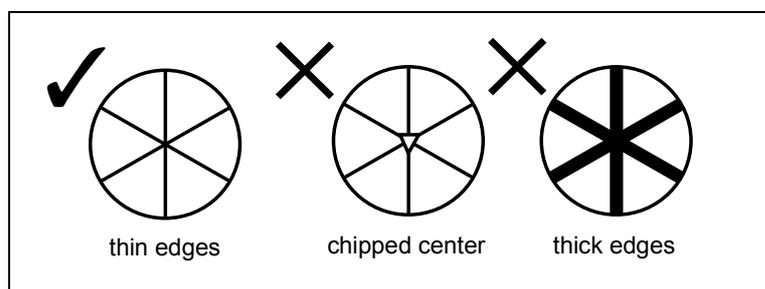

As the Nivo series is extremely sensitive, multiple reflections on the prism surface can sometimes cause a significant loss in accuracy.

To maintain the accuracy of your measurements:

- When measuring a short distance, incline the prism slightly so that the EDM can ignore unnecessary reflections on the prism surface, as shown below.
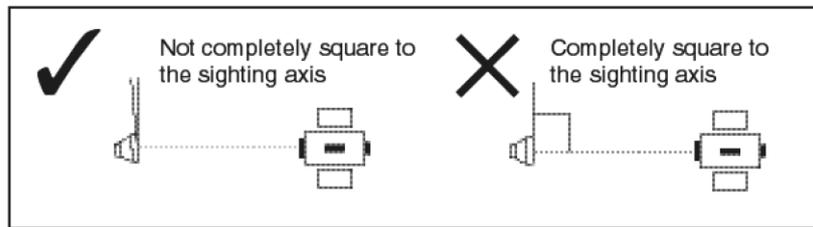

Hold the prism securely in place and do not move while taking measurements.

In Prism mode, in order to avoid false measurements on objects other than the prism or reflector-sheet, targets that are less reflective than the prism or reflector sheet are not measured. Even if you start a measurement, measured values are not displayed. To measure less reflective objects, use the N-prism (reflectorless) mode

Measurement in Reflectorless mode

The intensity of the reflection from the target determines the distance the Nivo series can measure in this mode. The color and condition of the target surface also affect the measurable distance, even if the targeted objects are the same. Some less-reflective targets may not be measured.

The following table describes some examples of targets and approximate measureable distances.

Target	You can measure approximately...
Traffic signs, reflectors	500 meters (1640 feet)
Paper (white), veneer (new)	300 meters (990 feet)
wall (brightly painted), brick	100 to 200 meters (330 to 660 feet)

Measurable distances may be shorter or measurement intervals may be longer in the following cases:

- the angle of the laser against the target is small

- the surface of the target is wet

In direct sunlight, the measurable distance may be shorter. In this case, try to throw a shadow on the target.

Targets with completely flat surfaces, such as mirrors, cannot be measured unless the beam and the target are perpendicular to each other.

Make sure there are no obstacles between the instrument and the target when taking measurents.

When you need to take measurements across a road or a place where vehicles or other objects are frequently moving, take several measurements to a target for the best result.

Preparing the Reflector Sheet

The reflector sheet can be used for measurements in Prism mode. Assemble the reflector sheet as shown below.
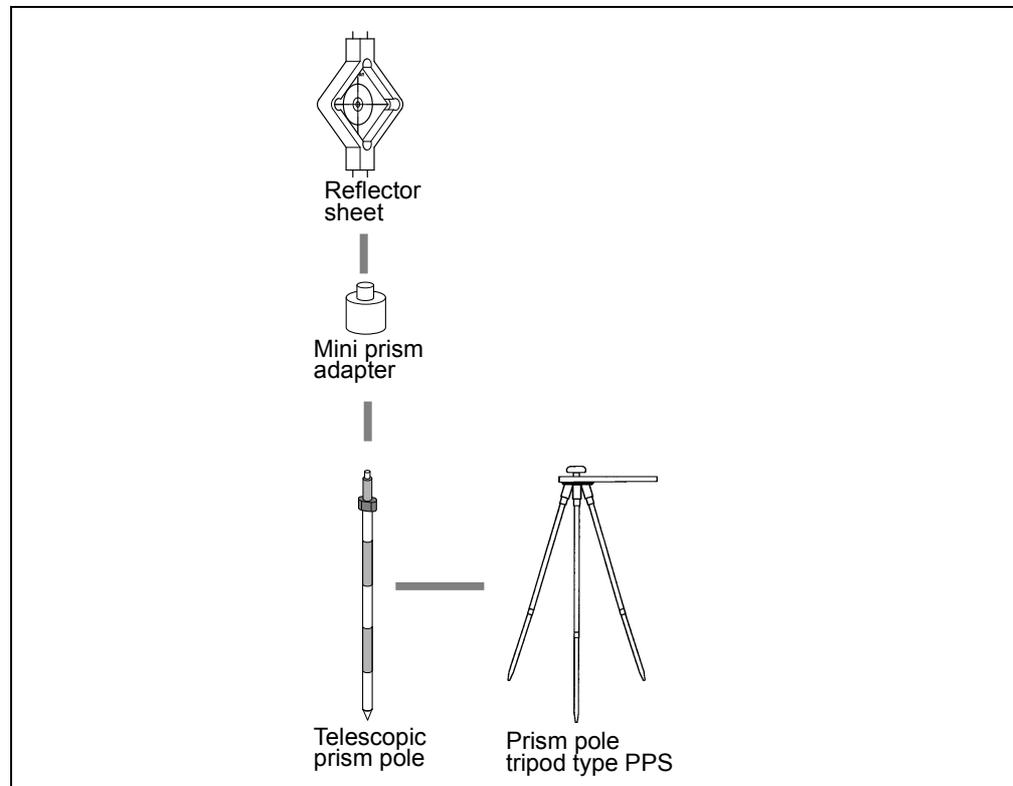

Setting Up the Prism Reflector

1.   Assemble the prism reflector as shown below.
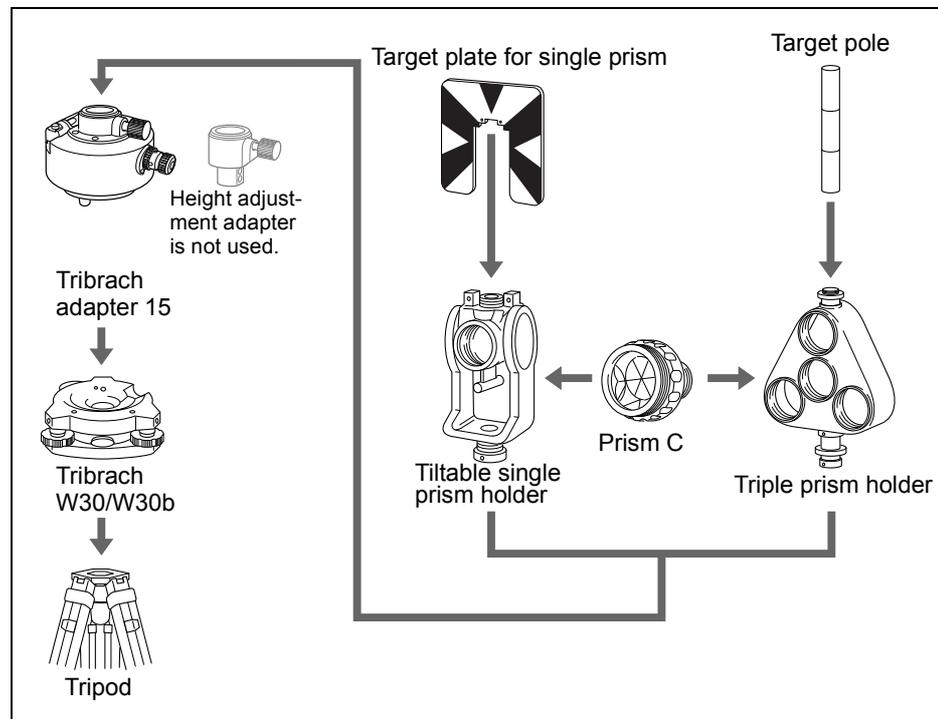

2.   Adjust the height of the tribrach adaptor (see page 21).

3.   If necessary, change the direction of the prism (see page 21).

4.   Set the prism constant (see page 21).

5.   If you are using a single prism holder, set the position of the target plate (see page 22).

Detailed instructions for Step 2 through Step 5 are provided on the following pages.

Note – Nivo series must be used with the Tribrach W30 or W30b.

Adjusting the height of the tribrach adapter

The tribrach adapter has a height adjustment adapter. To use the prism reflector with a Nivo series instrument, remove the height adjustment adapter as shown in the Figure below.

The height adjustment adapter will be used with other Nikon Total Stations.
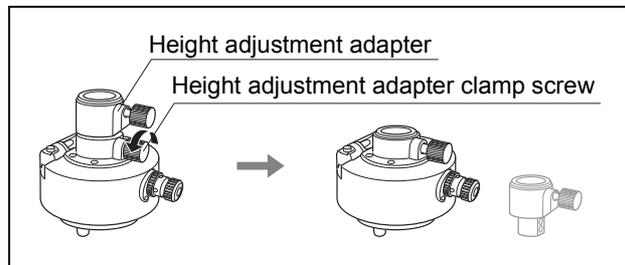

Changing the direction of the prism

The prism mounted on the tribrach adapter can be rotated to face in any direction.

To change the direction of the prism:

1. Release the rotation clamp. To do this, turn the clamp lever counterclockwise.

2. Turn the upper plate of the tribrach adapter until the prism is facing in the required direction.

3. Fasten the rotation clamp. To do this, turn the clamp lever clockwise.
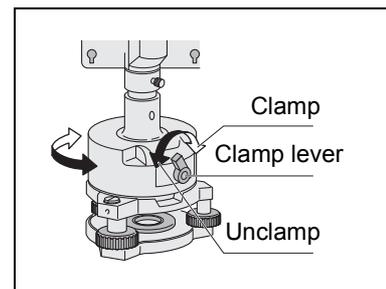

Setting the prism constant

1. Attach the prism to the single prism holder or triple prism holder.

Tip – To use a triple prism holder as a single prism holder, attach the prism to the center thread of the prism holder.

2. Set the prism constant. To do this, hold down [MSR1] or [MSR2] for one second. For more information, see Measurement settings, page 48.

Note – The prism constant of a Nikon prism is always 0, whether it is attached to a single prism holder or a triple prism holder.
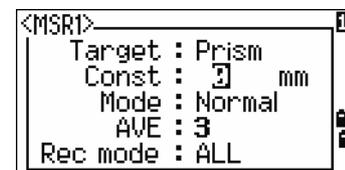

If your prism constant is not 0 mm, then directly enter the prism constant value in the *Const* field. For example, if your prism constant is 30 mm, enter **30mm** in the *Const* field on the instrument.

Tip – When you use the prism at a short distance, set the prism at a slight angle to the sighting axis, rather than completely square.

Setting the position of the target plate

If using a single prism, make sure that the target plate is aligned with the tribrach adapter and the prism.

To set the position of the target plate:

1. Use the two set screws supplied to attach the target plate to the single prism holder.

2. Move the target plate within the screw holes until the apex of the wedge pattern is aligned with the vertical axis of the prism and the tribrach adapter.

Center on axis
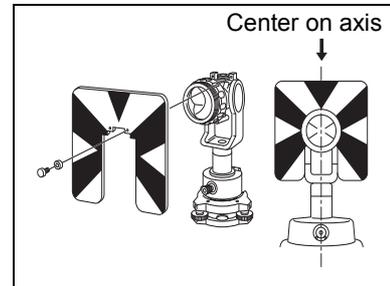

Getting Started

In this chapter:

- Turning the Instrument On and Off
- Changing Regional Configuration Pre-sets
- Display and Key Functions
- List Display
- Inputting Data
- Jobs
- Measuring Distances

Turning the Instrument On and Off

Turning on the instrument

1. To turn on the instrument, press ⌷PWR⌷. The start-up screen appears. It shows the model name, current temperature, pressure, date, and time. The display automatically changes to the electronic level after 2 seconds.

```
 Nio 2.M

Temp    20°C
Press  1013hPa
2008-08-27    14:01:59
```

If you have entered your name or your company's name in the Owner's detail field, the text from this field appears on the start-up screen. To set the Owner's detail field, go to MENU > Settings > Others. For more information, see page 113.

```
 NIKON-TRIMBLE
 Nio 2.M

Temp    68°F
Press  29.9inHg
2008-08-27    14:15:11
```

Turning off the instrument

To enter the power-off process, press ⌷PWR⌷ and ⌷ENT⌷.

```
Press ENT → OFF

           Reset      Sleep
```
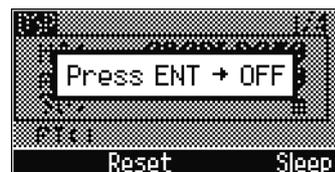

Then do one of the following:

Press ...	To ...
⌷ENT⌷ again	turn off the instrument
the Reset softkey	reboot the program and re-start the instrument
the Sleep softkey	put the instrument into power-saving mode
⌷ESC⌷	cancel the power-off process and return to the previous screen

If you press the Reset softkey, the software is rebooted and the Basic Measurement Screen (BMS) appears without an open job.

Sleep mode

If you press the Sleep softkey in the Press ⌷ENT⌷ → OFF screen, or enable the Power Save setting (see Power saving, page 110), the instrument goes into sleep mode.

```
Sleeping...
```

When the instrument is in sleep mode, it wakes up if any of the following occurs:

• You press a key

• The instrument receives a remote control command

- You rotate the alidade

- You tilt the telescope

Changing Regional Configuration Pre-sets

To provide easier configuration for common regional settings, you can quickly configure the Nikon total station to a pre-set combination of default regional settings. The Regional Configuration screen appears only after the language configuration is complete, the instrument has rebooted.

1. Follow the steps in Language, page 113.

   Once the instrument rebooted, the Regional Configuration screen appears.

2. Press ⌃ or ⌄ to highlight the required regional settings and then press ⌷ENT⌷.

3. If you do not want to change the current settings, press ⌷ESC⌷ and quit. The instrument will continue to use the last configured settings that were configured.

```
REGIONAL CONFIGURATION
Europe
International
United States
```

The settings affected by the Regional Configuration screen are:

Category	Setting	Europe	International	United States
Angle	VA zero	Zenith	Zenith	Zenith
	Resolution	1"(See note)	1"(See note)	1"(See note)
	HA	Azimuth	Azimuth	Azimuth
Distance	Scale	1.000000	1.000000	1.000000
	T-P corr.	On	On	On
	Sea Level	Off	Off	Off
	C&R corr.	0.132	0.132	0.132
Coordinates	Order	ENZ	ENZ	NEZ
	Label	ENZ	ENZ	NEZ
	AZ zero	North	North	North
Power Save	Main Unit	Off	Off	Off
	EDM Unit	Off	Off	Off
	Sleep	5 minutes	5 minutes	5 minutes
Communication	Ext. Comm	Nikon	Nikon	Nikon
	Baud	4800	4800	4800
	Length	8	8	8
	Parity	None	None	None
	Stop bit	1	1	1
Stakeout	Add PT	1000	1000	1000
Units	Angle	GON	DEG	DEG
	Distance	meters	meters	US-ft

Category	Setting	Europe	International	United States
	Temp	°C	°C	°F
	Press	mm Hg	mm Hg	In Hg
Rec	Store DB	RAW&XYZ	RAW&XYZ	RAW&XYZ
	Data Rec	Internal	Internal	Internal

	2nd Unit	None	None	None
	Split ST	No	No	No
	CD Input	<ABC>	<ABC>	<ABC>
	Owner's Detail	Blank	Blank	Blank

The default regional configuration pre-set is "United States" settings. For more information, see .

Display and Key Functions

The following figure shows the keys on the Nivo series instrument keyboard and the LCD display.

The functions of the Nivo keys are as follows.

Key	Function	Details
⏻	Turns the instrument on or off.	page 24
☼☀	(Illumination key) Provides access to the switch window. Turns on/off the LCD backlight if held down for one second.	page 30
MENU	Displays the MENU screen.	page 91
MODE	Changes the key input mode between alphanumeric and numeric if pressed when you are in a PT or CD field. Activates Qcode mode if pressed when you are In the Basic Measurement Screen (BMS).	page 32

Key	Function	Details
REC/ENT	Records measured data, moves on to the next screen, or confirms and accepts the entered data in input mode.	page 81
	You have the option to record the measurement as a CP record instead of an SS record, if you hold this key down for one second in the Basic Measurement Screen (BMS).	
	The instrument outputs the current measurement data (PT, HA, VA, and SD) on the COM port if you press this key in the BMS or in a Stakeout observation screen. (The Data Rec settings must be set to COM.)	
ESC	Returns to the previous screen.	
	In numeric or alphanumeric mode, deletes input.	
MSR1	Starts distance measurement, using the measure mode settings for the MSR1 key.	page 47
	Displays measurement mode settings, if held down for one second.	
MSR2	Starts distance measurement, using the measure mode settings for the MSR2 key.	page 47
	Displays measurement mode settings, if held down for one second.	
DSP	Moves to the next available display screen.	page 49
	Changes the fields that appear on the DSP1, DSP2, and DSP3 screens, if held down for one second.	
ANG	Displays the Angle menu.	page 52
STN 7	Displays the Station Setup menu.	page 53
	In numeric mode, enters 7. In alphanumeric mode, enters 7.	
S-O 8 ABC	Displays the Stakeout menu.	page 64
	Shows stakeout settings, if held down for one second.	
	In numeric mode, enters 8. In alphanumeric mode, enters A, B, C, or 8.	
O/S 9 DEF	Displays the Offset Point Measurement menu.	page 83
	In numeric mode, enters 9. In alphanumeric mode, enters D, E, F, or 9.	
PRG 4 GHI	Displays the Programs menu, which contains additional measuring programs.	page 71
	In numeric mode, enters 4. In alphanumeric mode, enters G, H, I, or 4.	
5 JKL	In numeric mode, enters 5. In alphanumeric mode, enters J, K, L, or 5.	
DAT 6 MNO	Displays RAW, XYZ, or STN data, depending on your setting.	page 38
	In numeric mode, enters 6. In alphanumeric mode, enters M, N, O, or 6.	
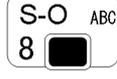

Key	Function	Details
USR PQRS 1	Executes the function that is assigned to the USR1 key. In numeric mode, enters 1. In alphanumeric mode, enters P, Q, R, S, or 1.	page 37
USR TUV 2	Executes the function that is assigned to the USR2 key. In numeric mode, enters 2. In alphanumeric mode, enters T, U, V, or 2.	
COD WXYZ 3	Opens a window where you can enter a code. The default code value is the last code entered. In numeric mode, enters 3. In alphanumeric mode, enters W, X, Y, Z, or 3.	page 33
HOT .-+ ⁻	Displays the (HOT) menu, which includes Height of Target, Temp-Press, Target, Note recording, and Default PT settings. In numeric mode, enters – (minus). In alphanumeric mode, enters . (period), – (minus), or + (plus).	page 34
▭ */= 0	Displays the Bubble indicator. In numeric mode, enters 0. In alphanumeric mode, enters *, /, =, (a space), or 0.	page 36

Status bar

The status bar appears on the right side of every screen. It contains icons that indicate the status of various system functions.
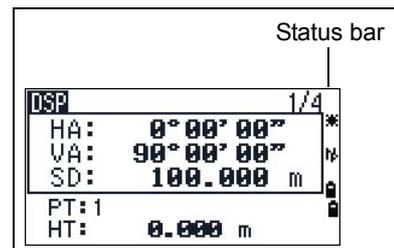

Input mode indicator

The Input mode indicator only appears when you are entering points or coordinates. It shows the data input mode:

1	Input mode is numeric. Press a key on the number pad to enter the number printed on the key.
A	Input mode is alphabetic. Press a key on the number pad to enter the first letter printed beside the key. Press the key repeatedly to cycle through all the letters assigned to that key. For example, to enter the letter O in alphabetic mode, press 5 three times.

Laser pointer indicator

The icon appears while turning on the laser pointer. When the icon is displayed on the screen, the emitting power is laser class 2.

✳	Laser pointer ON.
(None)	Laser pointer OFF.

EDM measurement status

When you are taking measurements, the EDM measurement status shows the mode that is being used.

When you display observation data, the EDM measurement status shows the mode that was used when the data was collected.

⊩   Reflectorless mode

Communication port status

(This is only available when the optional Bluetooth is installed. See Optional Bluetooth function, page 129.)

⋤   Bluetooth enabled

Battery indicator

Shows each voltage level of the right and left internal batteries individually. When the external battery is connected with the instrument, its voltage is shown.

        Internal batteries (above: Left battery, below: Right battery)

        External battery

Internal battery	External battery	
		Battery level indication
		: Battery low
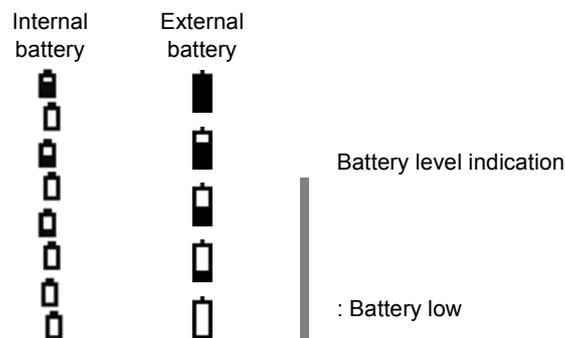

If the battery level becomes critically low, the message on the right appears:

```
┌──────────────────┐
│ ▐ BATTERY DOWN   │
│   Press ENT Key, │
│   Change Battery ▐│
└──────────────────┘
```
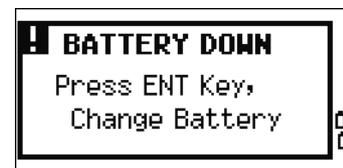

LCD backlight, Laser pointer, Beep sound and Contrast adjustment

<Switch set up window >   <Contrast adjustment window>
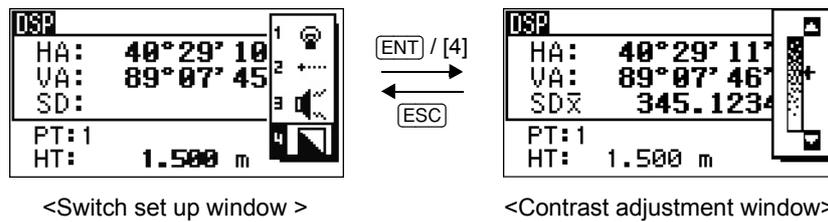

To turn on/off the 1. LCD backlight, 2. laser pointer or 3. beep sound, and to do the 4. contrast adjustment, press the illumination key and open the switch set up window shown above.

Holding down the illumination key for one second also turns on/off the LCD backlight.

- To turn on/off each function, press ENT when the option 1, 2, 3 or 4 is selected or directly press ①, ②, ③ or ④ numeric key.
- Press ⌃ or ⌄ to move the cursor up and down.
- In the contrast adjustment window, use ⌃ or ⌄ to adjust the contrast.

To close the window, press ESC.

1. LCD backlight

LCD backlight is OFF

LCD backlight is ON

2. Laser pointer

Laser pointer is OFF

Laser pointer is ON

3. Sound

Sound is OFF

Sound is ON

DSP key

Use the key to change the current display screen or to change display settings.

Switching between display screens

When several display screens are available, the DSP indicator appears at the top left of the screen, and the screen indicator (for example, 1/4) appears at the top right.

```
DSP                 1/4
 HA:     40°29' 11"
 VA:     89°07' 46"
 SDₓ      345.678  m
 PT:1
 HT:      1.500  m
```
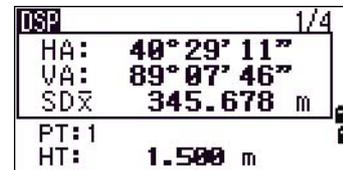

To move to the next available screen, press DSP.

```
DSP                 2/4
 HA:     40°29' 11"
 VD:       0.802  m
 HD:     343.248  m
 PT:1
 HT:     1.500  m
```
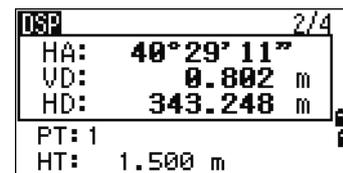

For example, if the DSP2 screen is currently displayed, press DSP to move to the DSP3 screen. The screen indicator changes from 2/4 to 3/4.

```
DSP                 3/4
 AZ:     85°44' 01"
 V%:      12.835%
 HD:     343.248  m
 PT:1
 HT:     1.500  m
```
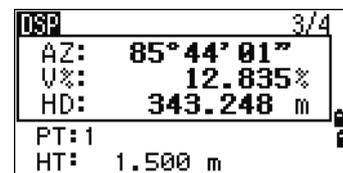

When the secondary distance unit is set, an additional screen is available. It shows the HD, VD, and SD values. For information on setting the secondary distance unit, see page 112.

The smallest unit of display for distances measured in feet-and-inches is 1/16 in. Smaller units are impractical in the field. When the actual value is greater than 99999'11"15/16, the ">" symbol is shown. If the actual distance is less than -9999'11"15/16, the "▶" (solid triangle) symbol is shown. This does not affect calculations. The precise value is used internally in all cases.

```
DSP                 5/5
 HD:> 476'09"3/8
 VD:▶ 092'10"15/
 SDₓ> 800'00"1/4
 PT:1
 HT:   1.500  m
```
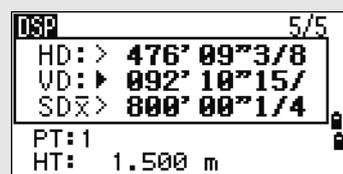

Customizing items in the Basic Measurement Screen (BMS)

To customize the items that are displayed on the DSP1, DSP2, and DSP3 screens:

1. Hold down DSP for one second.

2. Use the arrow keys ∧, ∨, <, and > to highlight the item that you want to change.

3. Use the ⊡ and ⊡ softkeys to scroll through the list of items that can be displayed for this item.

    The items that you can choose from are HA, AZ, HL, VA, V%, SD, VD, HD, Z, and (none).

```
 <DSP1>——<DSP2>——<DSP3>
   HA      HA      AZ
   VA      VD      V%
   SD      HD      HD
* Change item by ⊡ / ⊡
            ⊡     ⊡    Save
```
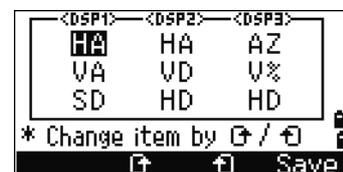

4. To save your changes, press the Save softkey. Alternatively, highlight the last item for DSP3 and press [ENT]. The DSP screens show the items you have selected.

Except for the (none) item, you cannot display the same item on more than one line of the same screen.
The items displayed in the DSP1, DSP2, DSP3, and DSP4 screens are also used in the corresponding Stakeout screens (SO2, SO3, SO4, and SO5).
You can also customize the displayed items in Stakeout.

Header characters

The following header characters can be used in DSP screens:
- A colon (:) indicates that tilt correction is applied to the value.
- A hash symbol (#) indicates that tilt correction is off.
- An underscore (_) under the tilt correction character indicates that Sea Level Correction or Scale factor is applied.

```
DSP                  2/4
HA#      40°29'11"
VD#          0.802  m
HD#        343.248  m
PT: 1
HT:    1.500 m
```
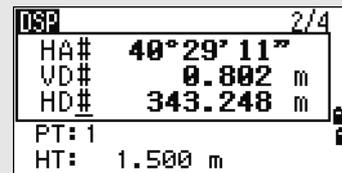

[MODE] **key**

Use the [MODE] key to change the keyboard mode for the current screen.

Changing input mode while entering points or codes

When the cursor is in a point (PT) or code (CD) field, press [MODE] to change the input mode between alphanumeric (A) and numeric (1).

```
Record PT            A
PT:A102
HT:      1.702  m
CD:HUB
             List Stack
```
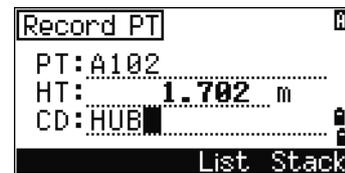

The input mode indicator in the status bar changes to show the current input mode.

```
Record PT            1
PT:A102
HT:      1.702  m
CD:HUB
             List Stack
```
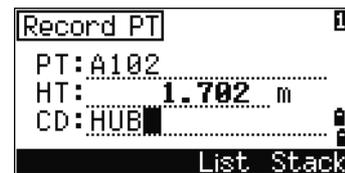

When the cursor is in a height (HT) field, only numeric input mode is available. Pressing [MODE] has no effect when the cursor is in a HT field.

Quick code measurement mode

1. To activate Quick code measurement mode, press MODE in the BMS.
    The PT field shows the default point name.

2. Press any numeric key (0 through 9) to start measuring and recording points.

    A list of the numeric keys and their assigned feature codes appears on the right side of the screen.

    For example, when you press 6, the code assigned to 6 is selected, and the instrument starts a measurement.
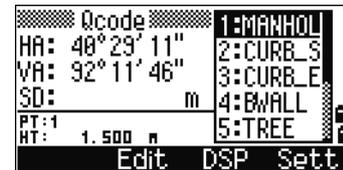

3. If you have set the record mode to Confirm (see Measurement settings, page 48), the Record PT screen appears after each measurement.

    Do one of the following:

    –   To record the point, press ENT.

    –   To return to the BMS, press ESC.

To assign a new feature code to a numeric key, press ⌃ or ⌄ to highlight the code that you want to change. Then press the Edit softkey.

You can use the DSP softkey to change the values shown in the measurement box, in the same way as you use the DSP key in the Basic Measurement Screen (BMS).

---

4. To return to the BMS from the Qcode screen, press MODE or ESC.

COD **key**

In the BMS, press COD to change the default feature code that will appear in the CD field when you record a point.

Setting the default code

When you press COD in the BMS, a window for entering the feature code appears.

You can use the List and Stack softkeys to enter the code.

Qcode observations

To enter the Quick code observation routine, press the
Qcode softkey.

In this function, you can use the ten numeric keys to
both select a feature code and shoot a point.

To change the measurement mode for the Quick code
observation, press the Sett softkey.
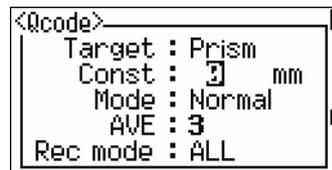

In Quick code measurement, the Rec mode can only be set to Confirm or ALL.

[HOT] **key**

The HOT key menu is available on any observation
screen. To display the HOT key menu, press [HOT].

Changing the height of the target

To change the height of the target, press [HOT] to display
the HOT menu. Then either press [1] or select HT and
press [ENT].

Enter the height of the target, or press the Stack
softkey to display the HT stack. The HT stack stores
the last 20 HT values entered.
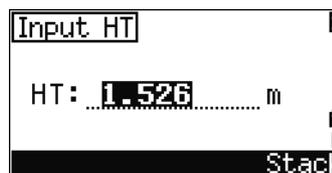

Setting the temperature and pressure

To set the current temperature and pressure, press [HOT]
to display the HOT menu. Then either press [2] or select
Temp-Press and press [ENT]. Enter the ambient
temperature and pressure. The ppm value is updated
automatically.
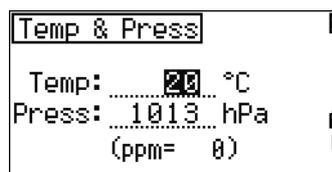

Selecting the target set

A target set specifies settings for the target type, the
prism constant, and height of target. When you change
the selected target set, all three settings are changed.
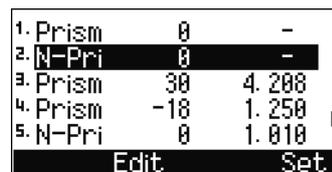

You can use this function to quickly switch between two types of target, such as a reflector sheet and a prism. You can prepare up to five target sets.

Press [HOT] to display the HOT menu. Then either press [3], or select Target and press [ENT]. A list of the five target sets appears. To select a target set, either press the corresponding numeric key ([1] through [5]), or use [^] or [v] to highlight the target set in the list and press [ENT].

To change the settings defined in a target set, highlight the target set in the list. Then press the Edit softkey.

Type	Prism/N-Prism
Const	–999 to 999 mm
HT	–9.990 to 99.990 m

```
<TGT1>
      Type: Prism
     Const:      0 mm
  HT:                   m
```

HT can be left blank in the target set. If you leave it blank, the current HT value is always applied to the measurement.

When a target set is selected, the Type and Const values are copied to both [MSR1] and [MSR2] settings, and to the measurements in Qcode. If you have specified a value for HT, this value is also copied to the current HT.

Entering a field note

To enter a field note, press [HOT] to display the HOT menu. Then either press [4], or select Note and press [ENT].

This function can be used at any time on any observation screen.

Each note can be up to 50 characters.

The note is stored as a CO record in the raw data.

```
Input Note
FINISHED
                    Stack
```

```
Input Note
FINISHED
                    Stack
```

To display a list of previously used notes, press the Stack softkey. The stack stores the last 20 notes.

Use [^] or [v] to highlight a note in the list. Then press [ENT] to select the note.

```
IN TOLERANCE
OUT OF TOLERANCE
GO NEXT SITE
CONTINUE TOMORROW
```
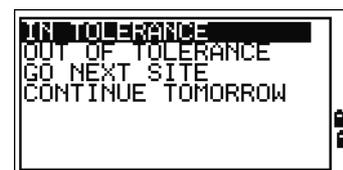

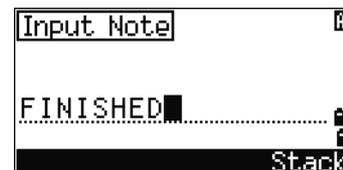

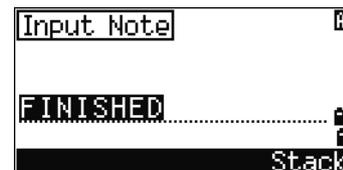

Setting the default point name

To change the default point name, press ⌊HOT⌋ to display the HOT menu. Then press ⌊5⌋, or select Default PT and press ⌊ENT⌋.

This function is available from any observation screen.

Modify the default point name for the next record.

Press ⌊ENT⌋ to confirm the new default point name. The new point name is appears as the default PT name on the input screen.
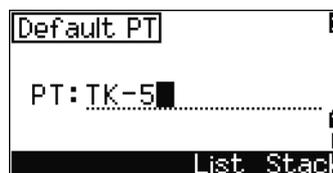

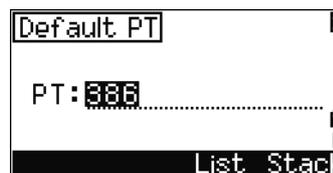

Bubble indicator

The bubble indicator is automatically displayed if the instrument goes out of level while the compensators are turned on, and also appears after the start up screen.

To display the bubble indicator in an observation screen, press ⌷ .

The Nivo series has two-axis level compensation. To turn the leveling compensators on or off, press ⌊<⌋ or ⌊>⌋. When the leveling compensators are turned off, the text OFF appears on the screen.
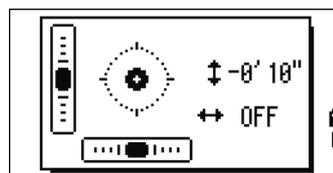

If the instrument is more than ±3'30" out of level, the text OVER appears on the screen.

To return to the observation screen, press ⌊ESC⌋ or ⌊ENT⌋.
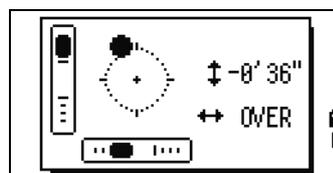

Laser plummet

Laser plummet ON/OFF

Press [☀ ON] to enable the laser plummet.

Press ⌊ESC⌋ to close the bubble indicator window.
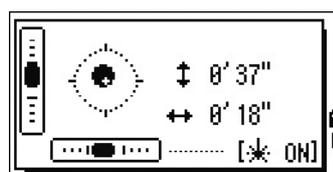

Press [↓ OFF] to disable the laser plummet.

Press [Lumi.] to open the luminance adjustment window.

Press ⌊ESC⌋ to disable the laser plummet and close the bubble indicator window.
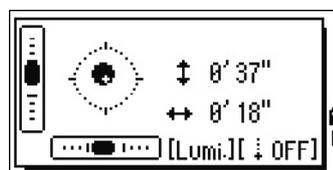

(Laser plummet is on.)

Laser luminance adjustment

Laser luminance can be set to 4 levels.

Press [Max.] to increase the luminance of the laser plummet.

Press [Min.] to decrease the luminance of the laser plummet.

Press⌷ESC⌷ / ⌷ENT⌷ to return to the bubble indicator window.

```
-LASER PLUMMET ADJ.-

[ Min. ] ·················[ Max. ]
```
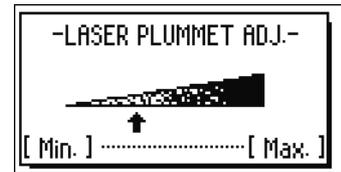

The current setting of leveling compensators is indicated by header characters (:, #, :, and #) after field labels (such as HA, VA, SD, and HD) in observation screens. For more information, see .

⌷USR⌷ **keys**

If you use a function frequently in the field, you can assign it to the ⌷USR1⌷ or ⌷USR2⌷ key. Whenever you press a ⌷USR⌷ key, the function that is assigned to that key is activated directly.

The following functions can be assigned to the ⌷USR⌷ keys:

- Input HT

- BS Check

- Base XYZ

- Default PT

- Select Target

- Input Temp-Press

- Input Note

- The following menus, or a single function from one of these menus:

    - Cogo

    - O/S

    - PRG

By default, Input HT is assigned to ⌷USR1⌷, and no function is assigned to ⌷USR2⌷.

Hold down the ⌷USR⌷ key for one second to display the list of functions that can be assigned to the key. The currently assigned function is indicated by an asterisk (*) beside the function name.

To change the function that assigned to the key, press ⌷^⌷ or ⌷v⌷ to highlight the function. Then press ⌷ENT⌷.

```
USR1 Select Functions
*HT
 BS Check
 Base XYZ
 Default PT
 Target
```
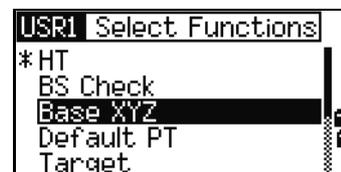

If an item on the list has an arrow (→) beside it, this item is a menu. If you highlight a menu item and then press ENT, a sub-menu appears.
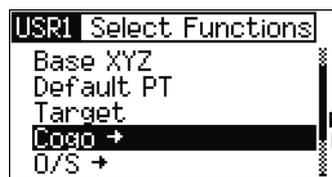

The first item on the sub-menu ends with the text [MENU]. If you select this item, the whole menu is assigned to the USR key.

To assign a specific function from the sub-menu, press ∧ or ∨ to highlight the function. Then press ENT.

Once you have assigned a function to a USR key, it is called directly whenever you press that USR key in the BMS.
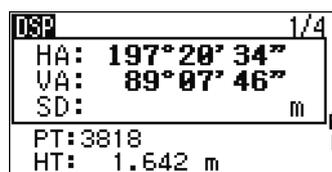

To change the type of data that is assigned to the USR keys in MENU > 1sec-Keys > [USR]. For more information, see [USR] key settings, page 132.

DAT key

Use the DAT key to quickly access data in the current job from observation screens.

When you press DAT in the BMS or in observation screens in functions such as Stakeout, 2Pt RefLine, and Arc RefLine, the assigned data in the current job appears.

Hold down DAT for one second in the BMS or an observation screen to display the Select Format screen. Use this screen to change the type of data that is assigned to DAT. Press 1 or select DAT [MENU] to display the Data menu whenever you press DAT.
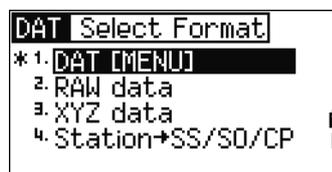

When you select an option from this screen, the change is applied immediately, and the selected data type appears.

Press ESC to return to the previous observation screen.

To change the type of data that is assigned to DAT, go to MENU > 1sec-Keys > [DAT]. For more information, see [DAT] key settings, page 133.
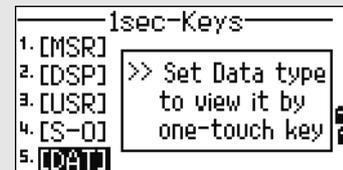

List Display

Available jobs or data appear in a list display when you do any of the following:

- view or edit data (MENU > Data)
- open the code list, point list, or Job Manager (MENU > Job)
- search for points or codes

In the list, the current cursor position is shown in reverse video (it appears as white text on a black background).

Press ⋀ or ⋁ move the cursor one line up or down.

If the Page Up icon ◼ appears, there are more pages before the current page. Press < to move up one page.

If the Page Down icon ◼ appears, there are more pages after the current page. Press > to move down one page.

To select an item from the list, move the cursor onto the item and press ENT.

Inputting Data

Entering a point name or number

You can use numeric or alphanumeric names up to 16 characters long to identify points.

The default name for a new point is the last point name entered, with the last digit incremented. For example, if the last point name was A100, the default name for the next point is A101.

If the last character of the previous point name is alphabetic, the default point name is the last point name.

When the cursor is in a PT (point) field, there are several ways to specify a point, or input coordinates.

Entering an existing point

When you enter a known point name or number, the coordinates of that point are displayed briefly. A short beep sounds before the next screen appears or the next field is selected.
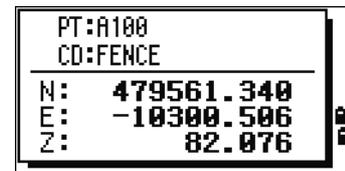

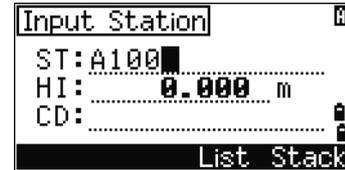

To adjust the duration of the coordinate window display, go to MENU > Settings > Others. To leave the window open until you press [ENT], set the XYZ disp field to +ENT. For more information, see .

Entering a new point

When you input a new point name or number, a coordinate input screen appears. Enter the point's coordinates in NE, NEZ, or elevation-only (Z) format.
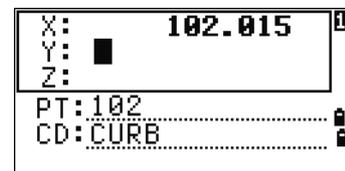

Press [ENT] on the last line (the CD field) to store the point in the current job.
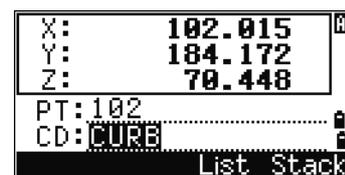

Pressing [ENT] without a point name

To use a point without recording the coordinates, press [ENT] in a PT field, without entering a point name.

The input coordinates are used in the calculation. They are not saved in the database.

```
X: █                    1
Y:
Z:
           * This PT will not
               be recorded
```

Specifying a wildcard (*)

If you include an asterisk (*) when you enter a point or code name, a list of points that match the entered text appears.

```
Input P1        P1 ⟨ P2    1
                      ×
P1: █....................
P2: ....................
MsrPT        List  Stack
```
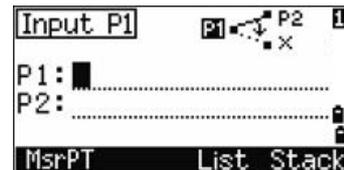

Use ⌃ or ⌄ to move the cursor to the point that you want to use. Then press ENT.

If the Page Up ▪ or Page Down ▪ icons are displayed, use ⟨ or ⟩ to page up or page down the list.

```
UP,A100,FENCE
UP,A100-0,
UP,A100-1,MANHOLE
UP,A100-2,
UP,A100-4,
UP,A100-6,CODECODE
UP,A1000,
```

When you select a point from the list, its coordinates are displayed and a beep sounds.

```
 PT:A100
 CD:FENCE
 ─────────────────────
 N:    479561.340
 E:    -10300.506

```

Recording an instant measurement

You can also input a point by recording an instant measurement. To do this, press the MSR softkey.

```
Input Line P1          1
 P1: █...............
 P2: ...............
MsrPT        List  Stack
```
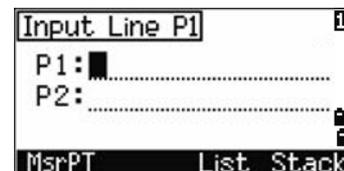

An observation screen appears.

Press MSR1 or MSR2 to start a measurement. To change the height of the target, press the HT softkey.

```
HA:  147°29'11"
VA:   90°27'48"
SD:              m
HT: ...1.555... m
* Sight PT & Press [MSR]
              HT
```
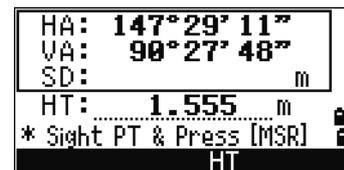

To go to the point recording screen when you have finished the measurement, press ENT.

Enter the point or code name. Press ENT.

```
X:     102.015         A
Y:     184.172
Z:      70.448
PT:102 ................
CD:CURB ................
              List  Stack
```
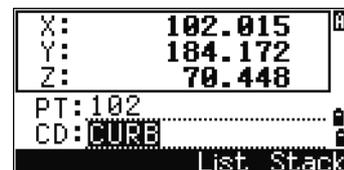

When you move the cursor to a field, the current or default value appears in inverted text (this is the default "Replace All" input mode).

```
┌─Input Station─────────┐ 🔋
│ ST:A-1                 │
│ HI: █▌█▌█▌█ ........ m │
│ CD:                  🔋│
│                       │
└───────────────────────┘
```
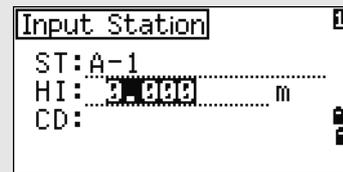

Press ⊳ to change the input mode to Overwrite mode and highlight the first character. Press ⊲ to move the cursor the end of the string.

```
┌─Input Station─────────┐ 🔋

└───────────────────────┘
```
Entering a code

The CD (Code) field always defaults to the last code used. You can change the selected code on the input point screen, or you can press COD in the BMS. For more information, see [COD] key, page 33.

You can use numeric or alphanumeric names up to 16 characters long to identify codes.

Entering a code directly

To enter a code directly, press MODE to change the input mode to alphanumeric or numeric mode. Then use the keypad to enter the code.

```
Record PT            A
 PT:A102
 HT:     1.702 m
 CD:HUB
              List Stack
```
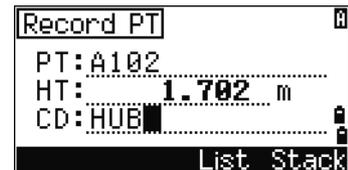

Entering a code from the stack

The code stack is a list of recently used codes. The stack may contain up to 20 codes.

To display the stack, press the Stack softkey when the cursor is in the CD field.

Use ^ or v to move the cursor to the code that you want to use. Then press ENT.

The selected code is copied to the CD field.

```
Record PT            1
 PT:A102
 HT:     1.702 m
 CD:BC2
              List Stack
```

```
BC2                  A
HUB
BWALL
POB
ROOF
POLE
BM
```

When the instrument is rebooted, the code stack is cleared.

Entering a code from the code list

To display a list of existing codes, press the List softkey when the cursor is in the CD field.

To edit the code list, go to MENU > Data > Code List. For more information, see Editing an item in the point list or code list, page 126.

Use ^ or v to highlight the feature code that you want to use. Then press ENT.

```
Record PT            1
 PT:A102
 HT:     1.702 m
 CD:BC2
              List Stack
```

```
GENERAL+             A
RAILROADS+
ROADS+
STRUCTURES+
SURFACE+
SURVEY+
UTILITIES+
```

A layer has an arrow at the end of the code label. If you highlight a layer in the list and then press (ENT), the codes and layers in that layer are displayed.

When you return to the input screen, the selected code is entered in the CD field.

Items are shown in alphabetic order.

You can also use the first character search to quickly find a code. For more information, see Advanced feature: Searching for a code by using the first character, page 44.

Advanced feature: Searching for a code by using the first character

To find a code quickly when the code list appears, use the first-character search.

For example, to see feature codes that begin with T, use the keypad to enter the letter T. To do this, press ⊡ twice.
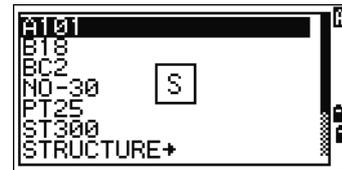

After each press of the key, the input mode field displays the selected letter. For example, if you press ⊡, S appears. If you quickly press ⊡ again, T appears. If you do not press the ⊡ key again, the letter T is selected.
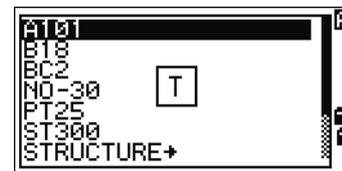

Once you have selected a letter, the cursor moves to the feature code beginning with that letter.

If there is no code beginning with that letter, the cursor moves to the next available letter.
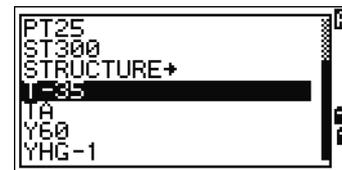

Qcodes

Quick codes (Qcodes) let you shoot and record many points with feature codes in the field. You can register up to ten Quick codes. To register Qcodes, press the Edit softkey. For more information, see Quick code measurement mode, page 33.
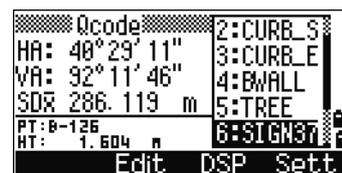

Press (MODE) to switch Qcodes on or off.

Press the Edit softkey to change the Qcode. You can edit the entire code, or just the number at the end of the code.

You can still use (DSP) to change the background displays.

Entering values in feet and inches

When either US Survey Feet (US-Ft) or International Feet (I-Ft) is selected as the distance unit, you can enter and display distances, HIs, HTs, and coordinate values either in decimal feet, or in feet and inches For more information, see Unit, page 111, and Others settings, page 112.

To enter values in feet and inches in an input screen, enter the elements, separated by periods (.), in the following format:

<Feet> ⟦.⟧ <Inches> ⟦.⟧ <Numerator> ⟦.⟧ <Denominator> ⟦ENT⟧
        (0–11)   (0–15)   (0–99)

The default denominator is 16. If the denominator is 16, you do not have to enter it, and it is not displayed on the screen.

```
┌─────────────────────────┐
│Record PT              🔋│
│ PT:280                  │
│ HT:2.08. 5.             │
│ CD:0/S 5.300            │
│                List Stack│
└─────────────────────────┘
```

For example, if you enter
⟦2⟧⟦.⟧⟦0⟧⟦8⟧⟦.⟧⟦5⟧⟦.⟧⟦ENT⟧, it appears as 2'08" 5∕ (2 feet, 8 and 5/16ths inches).

```
┌─────────────────────────┐
│Record PT              🔋│
│ PT:280                  │
│ HT:    2'08" 5/         │
│ CD:0/S 5.300            │
│                List Stack│
└─────────────────────────┘
```
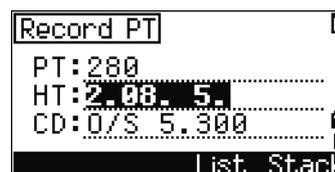

The following examples show how various values are entered:

To enter ...	Type ...
65' 5 3/8"	⟦6⟧⟦5⟧⟦.⟧⟦5⟧⟦.⟧⟦3⟧⟦.⟧⟦8⟧⟦ENT⟧
65'	⟦6⟧⟦5⟧⟦ENT⟧
65' 5"	⟦6⟧⟦5⟧⟦.⟧⟦5⟧⟦ENT⟧
65' 5 3/8"	⟦6⟧⟦5⟧⟦.⟧⟦5⟧⟦.⟧⟦6⟧⟦ENT⟧
5 3/8"	⟦0⟧⟦.⟧⟦5⟧⟦.⟧⟦3⟧⟦.⟧⟦8⟧⟦ENT⟧ or ⟦0⟧⟦.⟧⟦5⟧⟦.⟧⟦6⟧⟦ENT⟧

The numerator and denominator that you enter are automatically converted to the closest value from the following list: 0, 1/8, 1/4, 3/8, 1/2, 5/8, 3/4, 7/8, 1/16, 3/16, 5/16, 7/16, 9/16, 11/16, 13/16, 15/16.
If the denominator is 16, it is not shown on the screen.

Jobs

To record data on the instrument, you must create or open a job.

☀ **Tip –** Before you use the instrument for the first time, check the job settings.

Creating a new job

1. Press [MENU] to open the MENU screen.

2. Press [1] to open the Job Manager.

3. Press the `Creat` softkey to open the Create Job screen.

4. Enter the job name.

```
▓▓▓▓▓Job Manager▓▓▓▓▓
 NIKON123   02-06-21
*TOKYO-1    02-06-18
 CONTROL a  02-06-17
 020526-3   02-05-26
 YOKOHAMA   02-05-20
Creat DEL   Ctrl Info
```

```
Create Job
Job name: 020624-B

* [ENT] to create JOB
  [Sett] for Job settings
Abrt Sett        OK
```

5. Press the `Sett` softkey to check the job settings. You cannot change a job's settings once you have created the job.

6. Press [ENT] in the last field of the Job Sett screen to create the new job.

```
<Job Sett 1/3>        1
   Scale : 1.000000
 T-P corr. : ON
 Sea Level : OFF
 C&R corr. : 0.132
```
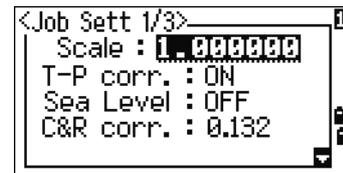

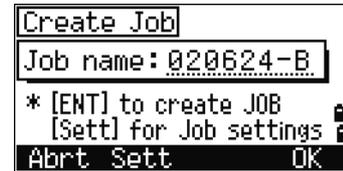

If either of the messages MAX 32JOBs or Data Full appears, delete at least one existing job to free space. You cannot free space by deleting records in an existing job.

Creating a control job

A control job, or common file, stores coordinate data that is used by several field jobs. You can create a control job in the office.

1. Press [MENU] to open the MENU screen.

2. Press [1] or select `Job` to open the Job Manager.

3. Move the cursor to the job that you want to use as the control job.

4. Press the `Ctrl` softkey.

5. Press the `Yes` softkey.

For more information, see Creating a control job, page 46.

```
▓▓▓▓▓Job Manager▓▓▓▓▓
 NIKON123   02-06-21
*TOKYO-1    02-06-18
 CONTROL a  02-06-17
 020526-3   02-05-26
 YOKOHAMA   02-05-20
Creat DEL   Ctrl Info
```

```
Control Job <ON>
Job name: NIKON123

  * Set this Job as
    the Control Job?
No               Yes
```
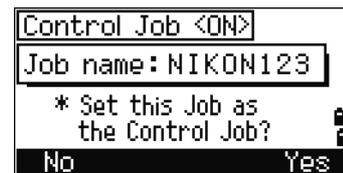

When you enter a point name or number, the system searches in the current job first. If the point is not found in the current job, the search is automatically extended to the control job. If the point is found in the control job, the selected point is copied to the current job as a UP record.

Measuring Distances

Sighting a prism reflector

⚠️ **WARNING –** Never look at the sun through the telescope. If you do, you may damage or lose your eyesight.

⚠️ **WARNING –** Precautions should be taken to ensure that persons do not look directly, with or without an optical instrument, into the beam.

⚠️ **WARNING –** Laser beam path should be located well above or below eye level wherever practicable.

For information on how to assemble the prism reflector, see Setting Up the Prism Reflector, page 20.

Sight the telescope to see crosshairs at the center of the prism reflector.

Sighting a single prism

Sighting a tiltable single prism
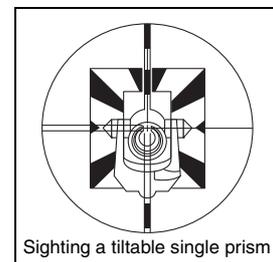

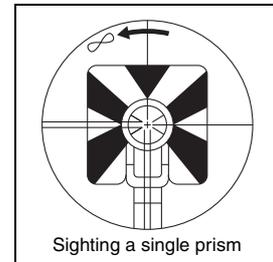

Measuring distances

To take a distance measurement, press [MSR1] or [MSR2] in the Basic Measurement Screen (BMS) or in any observation screen.
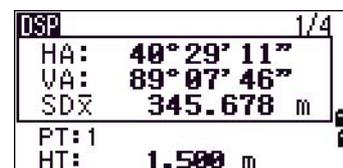

While the instrument is taking a measurement, the prism constant appears in a small font.
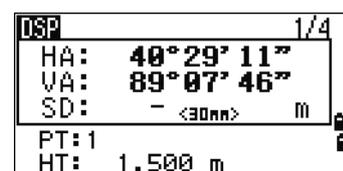

If the average count is set to 0, measurements are taken continuously until you press MSR1, MSR2, or ESC. Each time a measurement is taken, the distance is updated.

If the average count is set to a value from 1 to 99, the averaged distance appears after the last shot. The field name SD changes to SDx̄ to indicate the averaged data.
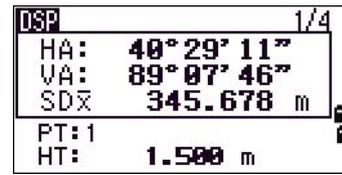

To change the height of target (HT), temperature, or pressure, press HOT. For more information, see [HOT] key, page 34.

Settings that relate to corrections (T-P corr, Sea Level, C&R corr., and Map projection) are included in the job settings. These settings are job-specific. If you need to change any of these settings, you must create a new job. For more information, see Job settings, page 93, and Settings, page 108.
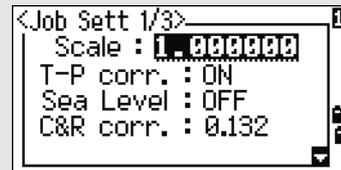

Measurement settings

To view the measurement settings, hold down MSR1 or MSR2 for one second.

Use ∧ or ∨ to move the cursor between the fields. Use < or > to change the value in the selected field.
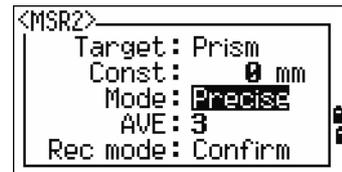

Field	Values
Target	• Prism • N-prism
Const (prism constant)	–999 mm through 999 mm
Mode	• Precise • Normal
AVE (Average count)	0 (Continuous) through 99
Rec mode	One of the following: • MSR only • Confirm • ALL

Target field

If the measurement is started with the Target field set to **Prism**, there is a dash "–" in front of the prism constant.

If the measurement is started with the Target field set to **N-prism**, there is a square bracket "]" in front of the prism constant.
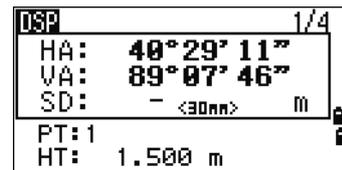

The symbol then constantly runs from left to right over the prism constant in the display.

When an N-prism measurement is taken, the ⊮ icon appears in the status bar (above the battery icon).

DSP	1/4
HA:	40°29' 11"
VA:	89°07' 46"
SD:	] ‹0mm› m
PT:1	
HT:	1.500 m

Incorrect Target settings may result in measurements outside the precision and intervals specified for the instrument.

If a prism target is aimed in the N-prism mode, the warning message "Signal High! → Try Prism Mode" will be displayed because of the excessive light reflection.

A measurement made immediately after changing the target setting may take a longer time than usual.The Target setting is used to apply better cyclic-error adjustment in distance measurement. It efficiently eliminates multipath reflection.

Rec mode field

The Rec mode setting controls how the [MSR1] and [MSR2] keys operate in the BMS.

The **MSR only** setting is the default measurement mode. After a measurement, the instrument stops in the BMS and waits for you to press [ENT] before recording the point.

The **Confirm** setting displays the Record PT screen before data is recorded.

The **ALL** setting is a quick shooting and recording mode. The instrument automatically records the point using the default PT/CD. The instrument then returns to the BMS for the next measurement.

Applications

In this chapter:

HA Reset and Angle Operations

To open the Angle menu, press ANG in the BMS. To select a command from this menu, either press the corresponding number key, or press ◁ or ▷ to highlight the command and then press ENT.

```
──────Angle──────
┌─────────────────┐
│ HA: 34°00'20"   │
└─────────────────┘
¹·0-Set      ⁴·Hold
²·Input
³·Rept.
```
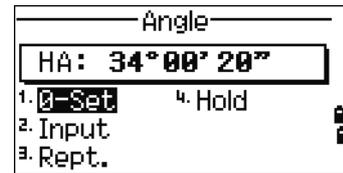

Setting the horizontal angle to 0

To reset the horizontal angle to 0, press 1 or select 0-Set in the Angle menu. The display returns to the Basic Measurement Screen (BMS).

Entering the horizontal angle

To display the HA Input screen, press 2 or select Input in the Angle menu. Use the numeric keys to enter the horizontal angle. Then press ENT.

```
┌HA Input┐          ⓵
│ HA:125.243█ ⋯⋯⋯   │
└───────────────────┘
 * Input Horizontal Angle
   and Press [ENT]
```
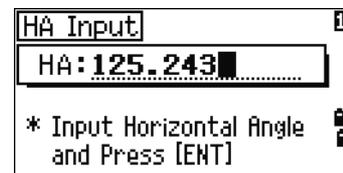

To enter 123°45'50", type 1 2 3 . 4 5 5 0.
The displayed value is rounded to the minimum angle increment.

Recording a foresight point after repeat angle measurement

1. To activate repeat angle measurement, press 3 or select Rept. in the Angle menu.

   HR=0 appears.

2. Sight the backsight and press ENT.

3. Sight the foresight and press ENT.

   The horizontal angle is accumulated and the value is held again.

4. To end repeat angle measurement, press ESC.

5. When you have accumulated enough horizontal angle between the backsight and the foresight, press MSR1 or MSR2 to take a measurement to the foresight.

```
┌REPT────────N= 0┐
│ HRΣ   0°00'00" │
│ HRx̄   0°00'00" │
│     -HA HOLD-  │
├────────────────┤
│* Sight the BS  ⯐BS⯏ FS│
│  Press [ENT]      ╲⋰│
```

```
┌REPT────────N= 1┐
│ HRΣ  35°00'07" │
│ VA:  87°52'12" │
│ HD:          m │
├────────────────┤
│* Sight the FS  BS ⯐FS⯏│
│  Press [ENT]/[MSR] ╲⋰│
```

```
┌REPT────────N= 1┐
│ HRΣ  35°00'07" │
│ HRx̄  35°00'07" │
│     -HA HOLD-  │
├────────────────┤
│* Sight the BS  ⯐BS⯏ FS│
│  Press [ENT]      ╲⋰│
```
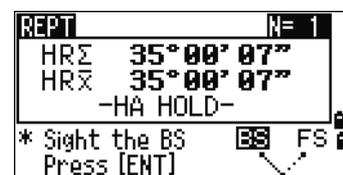

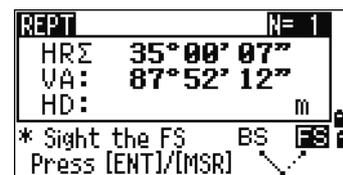

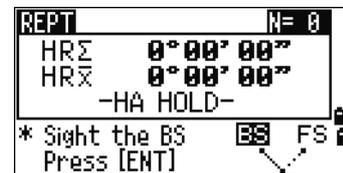

The averaged horizontal angle appears. This value is fixed until the process is finished or cancelled.

$$HR\overline{x} = HR\Sigma \div N$$
$$HA = BSAz + HR\overline{x} \text{ (normalized)}$$

HR$\overline{x}$ is not updated even if the instrument is moved.

6. Press [ENT] to store the foresight as a CP record. Check the PT, HT, and CD values. Then press [ENT] to record.
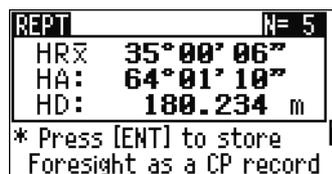

In repeat angle measurement, the HA is replaced by HRΣ. The number of repeat angles appears at the top of the screen (for example, N= 5).
Horizontal angles can be measured up to 1999°59'59".
This function stores both raw and XYZ data as CP records, regardless of the Store DB setting.

Horizontal angle hold

To hold the horizontal angle to the current value, press [5] or select Hold in the Angle menu.

To set the horizontal angle to the displayed value, press [ENT] or the Set softkey.

To cancel the process and return to the Basic Measurement Screen (BMS), press [ESC] or the Abrt softkey.
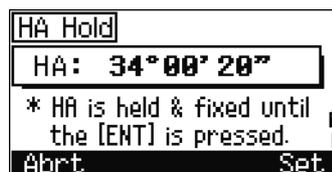

Station Setup

To open the Stn Setup menu, press [STN] in the BMS.

To select a command from this menu, press the corresponding number key. Alternatively, press [<] or [>] to highlight the command and then press [ENT]. Press [^] or [v] to move up or down one page.

The last function used is highlighted.
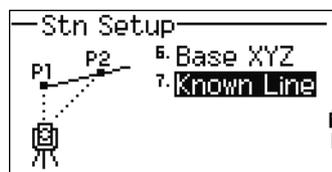

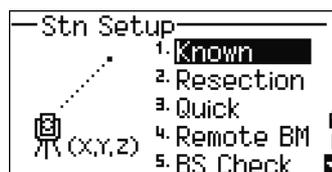

Setting up a station with known coordinates or azimuth

1. Press ① or select Known in the Stn Setup menu.

2. Enter a point name or number in the ST field.

   – If the input point number or name is an existing point, its coordinates are displayed and the cursor moves to the HI (Height of instrument) field.

   – If the point is new, a coordinate input screen appears. Enter the coordinates for the point. Press ⌊ENT⌋ after each field. When you press ⌊ENT⌋ in the CD field, the new point is stored.

   – If the specified point has a code, the code appears in the CD field.

3. Enter the instrument height in the HI field and then press ⌊ENT⌋.
   The Backsight screen appears.

4. Select an input method for defining the backsight point.

   – To sight the backsight by entering coordinates, see below.

   – To sight the backsight by entering the azimuth and angle, see .
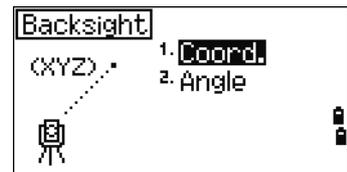

Sighting the backsight by entering coordinates
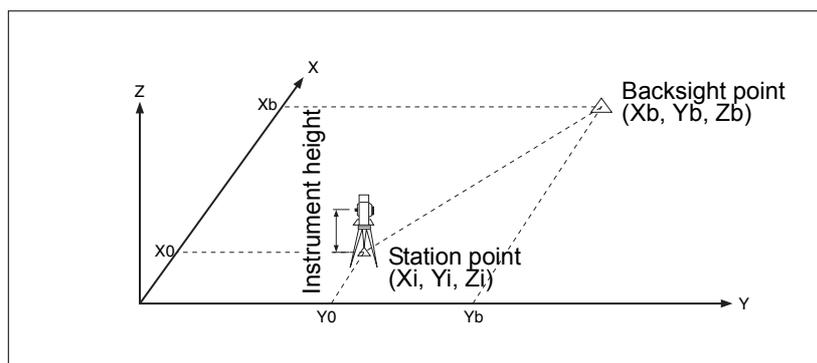

1. To enter coordinates for the backsight point (BS), press ① or select Coord in the Backsight screen.

```
┌Input BS Point┐        ▯
 BS:█
 HT:      0.000  m
 CD:
                  List  Stack
```

2. Enter the point name. If the point exists in the job, its coordinates are shown.

3. If you intend to take a distance measurement to the BS, enter the height of target in the HT field.

```
┌Input BS Point┐        ▯
 BS:462
 HT: 0.000      m
 CD:
                        Stack
```
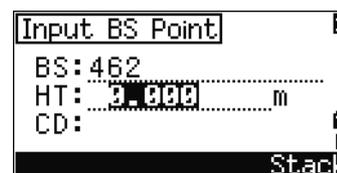

4. Sight the BS. Press ENT to complete the setup.

   – To record a full shot (with HA, VA, and SD values) to the BS, press MSR1 or MSR2.
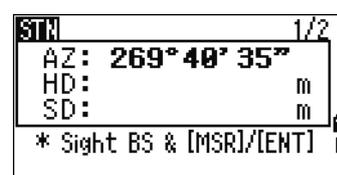

AZ   Azimuth calculated by coordinates

```
STN              1/2
AZ: 269°40' 35"
HD:              m
SD:              m
* Sight BS & [MSR]/[ENT]
```

   – If you are measuring to a known coordinate BS, press DSP to display a QA screen. The QA screen shows the dHD and dVD values, which indicate the difference between the measured distance and the distance calculated from the known coordinates.

```
STN              2/2
dVD:     -0.035  m
dHD:      0.019  m

* Press [ENT] to finish
```
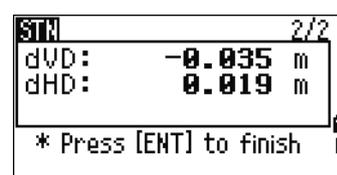

5. To record the station, press ENT.

6. To finish the station setup after taking a distance measurement, press ENT. ST and F1 records are stored to the current job.

```
STN              2/2
dVD:     -0.035  m
 ┌─ REC STN ─┐

* Press [ENT] to finish
```
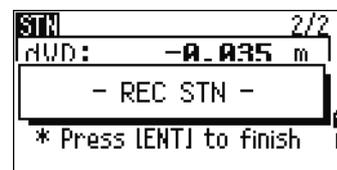

Sighting the backsight by entering the azimuth angle
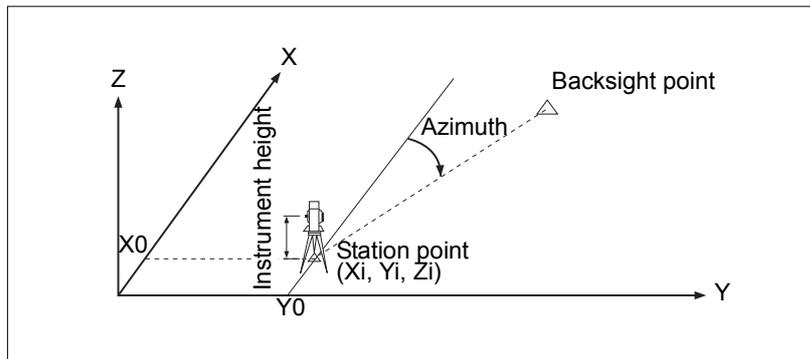

1. To enter the azimuth angle to the backsight point, press ② or select Angle in the Backsight screen.
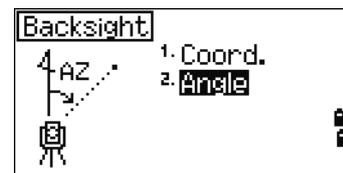

2. If there is no point name for the BS, press ENT on the BS field.
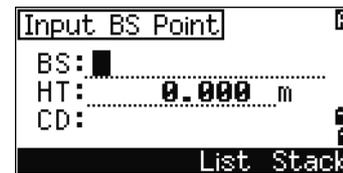

3. In the AZ field, enter the azimuth angle to the BS point.
   If you press ENT without entering a value in the AZ field, the azimuth is automatically set to 0°00'00".

4. Sight the BS point and press ENT. ST and F1 records are stored in the job.
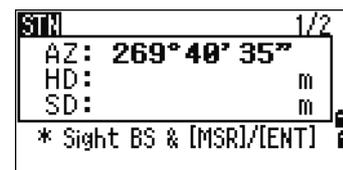

Setting up a station using multiple point resection

A resection sets up the station using angle/distance measurements to known points.
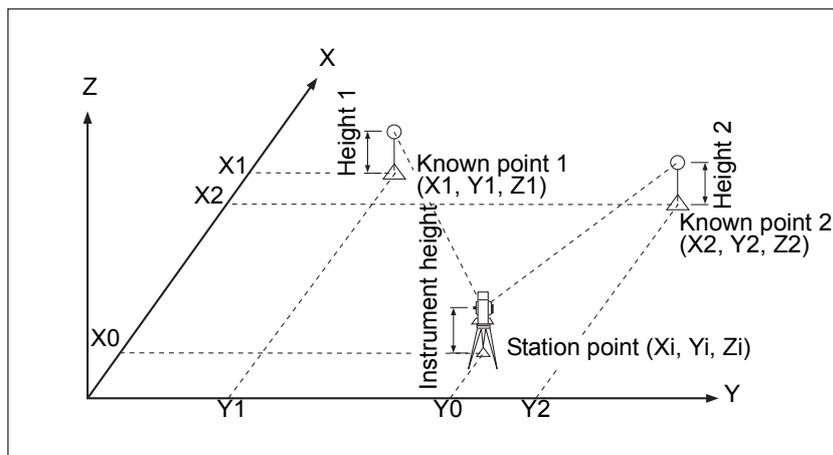

You can use a maximum of 10 points in a resection. Measurements can be distance and angle, or angle only. Calculation starts automatically when enough measurements are taken.

You can delete poor observations and recalculate if necessary. You can also select the BS point.

If the angle between known point 1 and known point 2 (measured from the station point) is extremely acute or extremely oblique, the resulting solution will be less reliable geometrically. For geometric reliability, select known point locations (or station point locations) that are widely spaced.

1. To start the resection, press ② or select
    Resection in the Stn Setup menu.

2. Enter the point name for the first observation
    point (PT1).

3. Enter the target height and press [ENT].
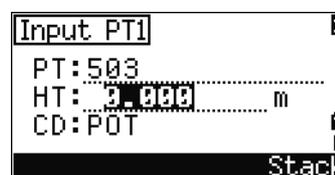

4.   Sight PT1 and press [MSR1] or [MSR2].

```
STN
 HA:    90°30' 26"
 HD:               m
 SD:               m
* Sight PT1 & [MSR]/[ENT]
```
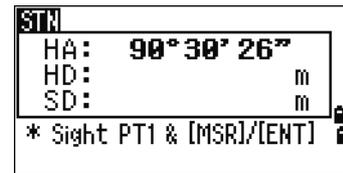

5.   To proceed to the next point, press [ENT].

```
STN
 HA:    96°30' 15"
 HD:    78.623  m
 SDx̄    79.001  m
* Press [ENT] to next PT
```
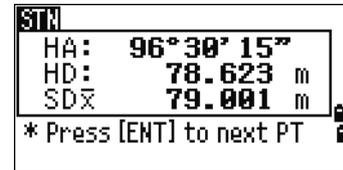

6.   Enter the second point (PT2) and its height of target.

```
Input PT2                1
 PT:█
 HT:       1.560  m
 CD:
                 List  Stack
```
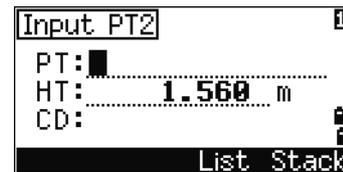

7.   Measure to PT2 and press [ENT].

When the instrument has enough data, it calculates the station (STN) coordinates.

```
STN
 HA: 148°55' 34"
 HD:               m
 SD:               m
* Sight PT2 & [MSR]/[ENT]
```
   –   If more than the minimum required data is available, a standard deviation screen appears.

   –   To take measurements to strengthen geometry of the resection, press the Add softkey. For information about the View softkey, see Advanced feature: Viewing and deleting a measurement in resection, page 59.

```
STN                    1/2
 σN:     0.019
 σE:     0.008
 σZ:     0.022
  * Press [REC] to finish
 Add   View   DSP   REC
```
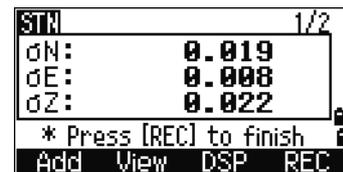

8.   When the results are satisfactory, record the station. To do this, press [ENT] or the REC softkey.

```
STN                    2/2
 N:    200.465
 E:    100.012
 Z:     64.416
* Press [Add] for next PT
 Add   View   DSP   REC
```
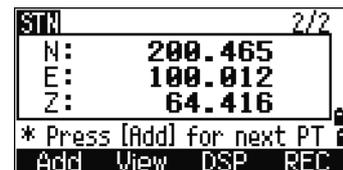

9.   Enter the height of instrument, if required. Press [ENT]. The ST field defaults to the last recorded PT + 1.
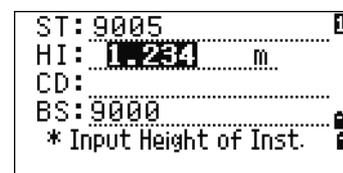

10. To change the station name, move to the ST field and edit or replace the text.

```
ST:9005                  1
HI: 1.234    m
CD:
BS:9000
 * Input Height of Inst.
```

If you have set Split ST to Yes, the ST field defaults to the last recorded ST value + 1. For more information, see Others settings, page 112.

BS defaults to the first observed point.

11. To change the BS, press the `Change` softkey.

```
ST:9005          🔋
HI:    1.234 m
CD:MANHOLE-7
BS:9000
  * Select Backsight PT
             Change
```

12. Select the BS point that you want to use and press [ENT].

```
Select BS point
9000,
200,MANHOLE
30-A,N-POLE
201,
```

13. To finish the resection setup, move the cursor to the BS field and press [ENT].

```
ST:9005
HI:    1.234 m
   - REC STN -

  * Select Backsight PT
```

The minimum data required for a resection is either three angle shots, or one angle shot and one distance shot. If you use a distance shot, the distance between the target points must be greater than the measured distance. Stn-Z is calculated from distance-measured data. If no distances are measured, then Stn-Z is calculated using angle-only measurements to points with 3D coordinates.

Advanced feature: Viewing and deleting a measurement in resection

To check the measurements to each known point, press the `View` softkey on the calculated STN (sigma or coordinate) screen.

```
▒▒▒▒▒ View Shots ▒▒▒▒▒
K-65,ROAD
200,MANHOLE
30-A,N-POLE
201,
202,
 Add   DEL
```

dHA	Distributed HA errors in each direction
dVD	VD errors between measured distance and calculated distance
dHD	HD errors between measured distance and calculated distance

```
dHA:   -4°19'02"
dVD:      0.026 m
dHD:      0.081 m
 PT:K-65
 HT:    1.852 m
 Add   DEL   DSP
```

To delete a measurement (because of large sigma values, for example), highlight the measurement data or display the detail screen for the measurement. Then press the `DEL` softkey. The STN coordinates are automatically recalculated.

To continue resection observations, press the `Add` softkey. The input screen for the next PT appears.

```
Input PT5        🔋
 PT:█
 HT:    0.000 m
 CD:

             List  Stack
```

Setting up the station quickly without coordinates

The station point (ST) in this function defaults to a new point number. For the new point, MP (0, 0, 0) is stored as the coordinates. When the ST is manually changed to a known point name, the station is set up on the coordinates of the known point.

1. To enter Quick Station setup, press ③ or select Quick in the Stn Setup menu.
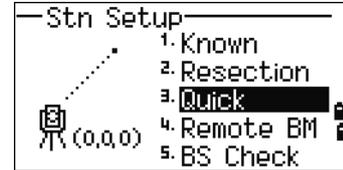

ST	Station point (defaults to the last recorded PT + 1, or ST + 1, depending on the Split ST setting)
HI	Height of instrument
BS	Backsight point (blank)
AZ	Backsight azimuth (defaults to zero)
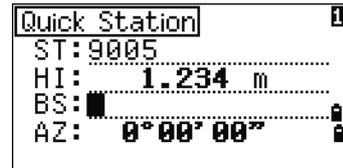

2. No default PT is assigned to the BS. Leave this field blank, or enter a BS point name.

3. The backsight azimuth (AZ) defaults to zero, but you can change this.

4. To complete the station setup, sight the BS and press [ENT].
   When you press [ENT] in the AZ field, both HA and AZ are reset to the value you have entered.

Even if both ST and BS are known points, this function does not calculate the backsight angle (AZ) automatically. To calculate the AZ between two known points (ST and BS), use Station Setup > Known. For more information, see Setting up a station with known coordinates or azimuth, page 54.

Determining station elevation

1. Press ④ or select Remote BM in the Stn Setup menu.

2. Enter the BM point and press [ENT]. When the point is found, it appears briefly. The cursor then moves to the HT field.

3. Enter the HT and press [ENT].
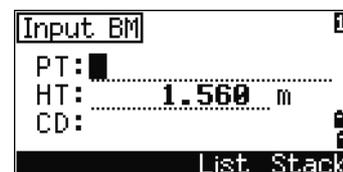

4. Sight the BM point and press ⌊MSR1⌋ or ⌊MSR2⌋.

```
RBM
 HA: 269°40' 35"
 VD:            m
 HD:            m
* Sight BM point and
     Press [MSR]
```

```
RBM
 HA: 269°40' 35"
 VD:     0.601  m
 HD:   108.524  m
     * Press [ENT]
```
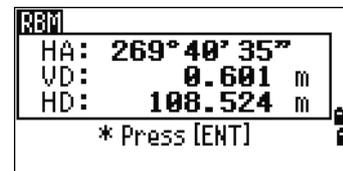

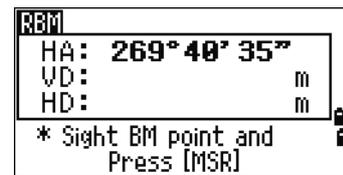

The updated station coordinates are displayed. You can change the HI in this screen.

5. To record the updated STN, press ⌊ENT⌋.

```
 X:     -88.721
 Y:     -20.146
 Z:      84.580
ST:T-37
HI: 0.000         m
```
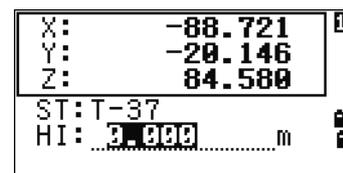

When the HI is changed, the Z coordinate is updated before the station is recorded.
You must complete a station setup before you use the Remote Benchmark function.

Checking and resetting the backsight direction

You must complete a station setup before you use the BS check function.
This function always refers to the backsight point from the last ST record stored in the current open job.

1. To enter the backsight (BS) check function, press ⌊5⌋ or select BS Check in the Stn Setup menu.

```
─Stn Setup──────
      BS  1. Known
          2. Resection
          3. Quick
          4. Remote BM
          5. BS Check
```

HA   Current HA reading
BS   The HA to the BS in the last station setup. Enter
     station coordinates for observations without recording
     data.

```
BS CHECK
 HA:   0°00' 02"
 BS:   0°00' 00"
 * Check the Backsight

Abrt              Reset
```
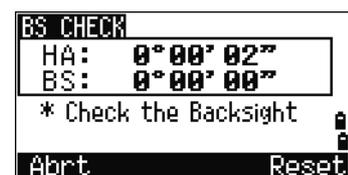

2. Do one of the following:

    –   To reset the horizontal angle to the HA set in the last station setup sight the BS and press the Reset softkey or press ⌊ENT⌋.

    –   To cancel the process and return to the BMS, press the Abrt softkey or press ⌊ESC⌋.

Base XYZ function:

Base XYZ does not store a ST record, so the BS Check cannot check the backsight when you enter a station using Base XYZ.

To store raw data, use one of the other functions in the Stn Setup menu. This function does not store an ST record in the job.

You can use this function without an open job. If there is an open job when you use this function, a CO record is stored to indicate that the instrument's base coordinates have changed.

1. To enter the Base XYZ function, press ⑥ or select Base XYZ in the Stn Setup menu.
   The current instrument XYZ values are shown as the default.
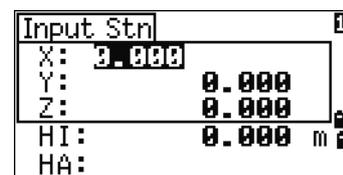

2. Enter the new instrument XYZ values and press [ENT].

3. Do one of the following:

   – To reset the horizontal angle, enter a value in the HA field and press [ENT].

   – If you do not need to reset the HA, leave the HA field blank and press [ENT].

   The display returns to the BMS.
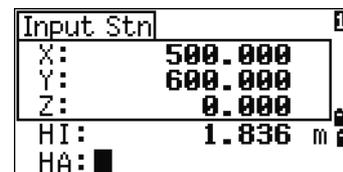

Two-point resection along a known line

1. To enter the Known Line function, press ⑦ or select Known Line in the Stn Setup menu.
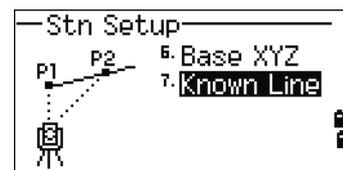

2. Enter a known point as P1.

   If you enter a new point name, a coordinate input screen appears.

   Sight P1 and press [MSR1] or [MSR2] to take a measurement. Press [ENT].
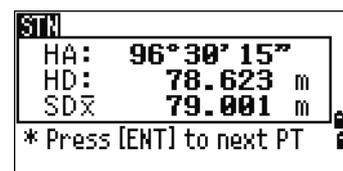

3. Choose how you want to define a known line:

   – To define the line by entering P2 coordinates, press ① or select By Coord.

   – To define the line by entering the azimuth, press ② or select By Angle.
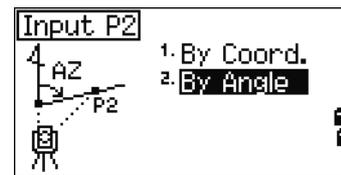

4. If you select By Angle, the azimuth input screen appears. Enter the angle value and press ENT.
   A measurement screen appears.

5. Sight P2 and press MSR1 or MSR2 to take a measurement. Press ENT.
   After the measurement to P2 is completed, the coordinates of the station are calculated.

6. To record the station, press ENT or the REC softkey.
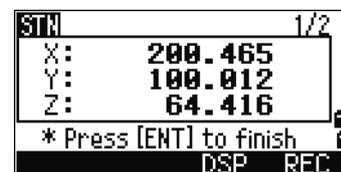

7. To check your measurement, press the DSP softkey. If you defined the line by entering its azimuth, HD and VD between P1 and P2 are displayed.
   If you defined the line by entering the P2 coordinates, the difference of HD (dHD) and VD (dZ) between your measurement data and input coordinate data are displayed.

8. Enter the station name, the height of instrument (HI), and a feature code (CD) if required. The station name defaults to the last recorded PT + 1, or last recorded ST + 1, depending on the Split ST setting.
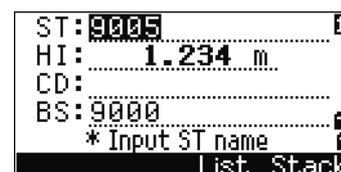

9. Backsight (BS) defaults to the first point (P1). To change it, highlight the BS field and then press the Change softkey.
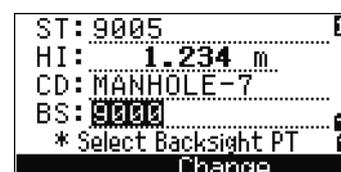

10. To finish the setup and record the station, press ENT in the BS field.

Stakeout
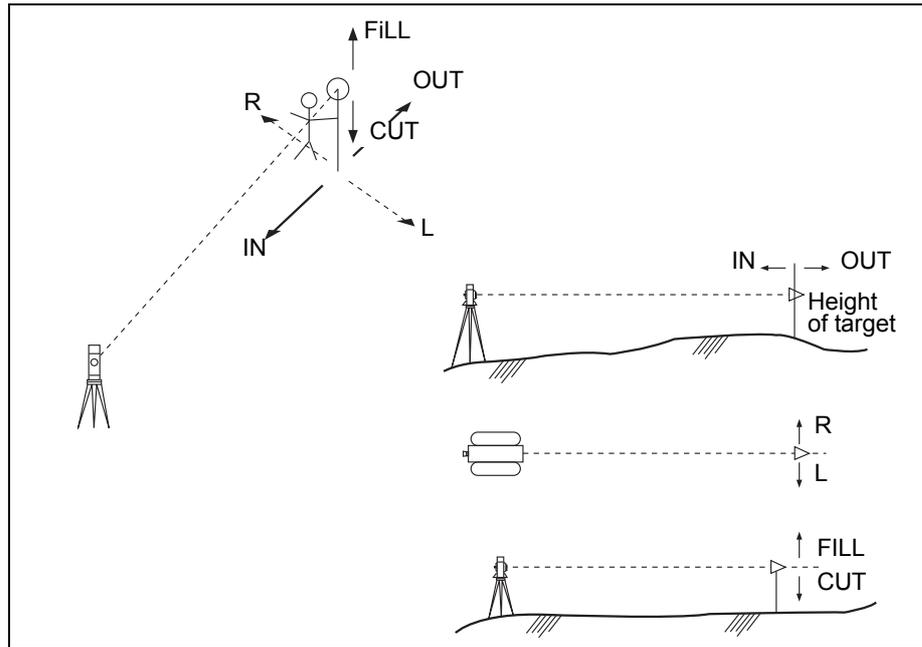

To display the Stakeout menu, press ⟨S-O⟩.
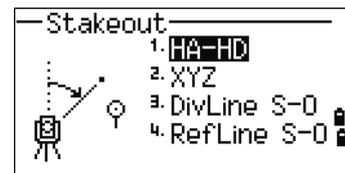

Specifying the stakeout point by angle and distance

1. To display the input screen for the distance and angle to the target, press ① or select HA-HD in the Stakeout menu.

2. Enter the values and press [ENT].

HD	Horizontal distance from station point to stakeout point
dVD	Vertical distance from station point to stakeout point
HA	Horizontal angle to stakeout point

```
┌─────────────────────┐   ▯
│Input Angle & Dist│
│ HD:█......................... m
│dVD:......................... m
│ HA:.........................
└─────────────────────┘
```
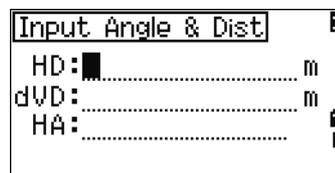

If you press [ENT] without entering HA, the current HA is used.

3. Rotate the instrument until the dHA is close to 0°00'00".

4. Sight the target and press [MSR1] or [MSR2].

    When the measurement is completed, the differences between the target position and the stakeout point are displayed.
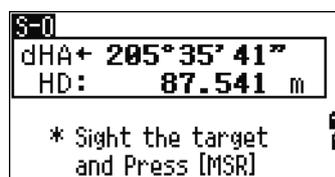

```
┌─────────────────────┐
│S-0
│dHA+ 205°35'41"
│ HD:    87.541 m
│
│ * Sight the target
│   and Press [MSR]
└─────────────────────┘
```

dHA	Difference in horizontal angle to the target point
R/L	Right/Left (Lateral error)
IN/OUT	In/Out (Longitudinal error)
CUT/FILL	Cut/FilL

```
┌─────────────────────┐  1/7
│S-0

Using ⌷DSP⌷ to switch between display screens

Press ⌷DSP⌷ to switch between the Stakeout display screens. The following screens are available:

S-O1	S-O2	S-O3	S-O4
dHA←	HA	HA	HL
R←	VA	VD	V%
OUT↑	SD	HD	HD
CUT↑			

S-O5	S-O6	S-O7	S-O8
X	dX	rSD	HD
Y	dY	rVD	VD
Z	dZ	rHD	SD
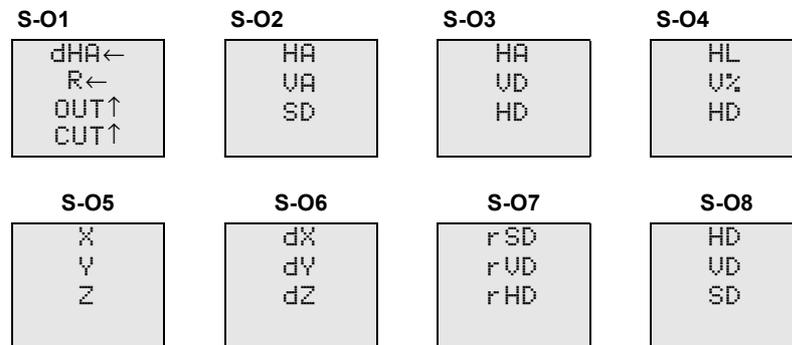

The S-O8 screen is only available if the secondary distance unit is set. For more information, see Others settings, page 112.

Every time you press ⌷DSP⌷, the next screen appears. If you press ⌷DSP⌷ in the last screen (S-O7, or S-O8 if the secondary distance unit is set), the S-O1 screen appears.

To customize the S-O2, S-O3, and S-O4 screens, hold down ⌷DSP⌷ for one second. For more information, see Customizing items in the Basic Measurement Screen (BMS), page 31.

To record the stakeout point, press ⌷ENT⌷. PT defaults to the last recorded PT+1.

Press ⌷ENT⌷ to record the point.

After recording the point, it returns to the observation screen. You can continue observation, or press ⌷ESC⌷ to input another angle and distance for stakeout.
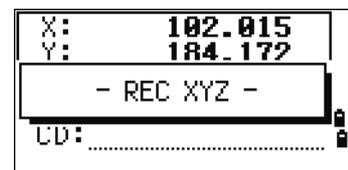

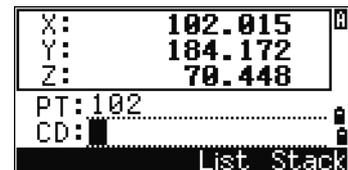

Specifying the stakeout point by coordinates

1. To start a stakeout by coordinates, press ②️ or select XYZ in the Stakeout menu.
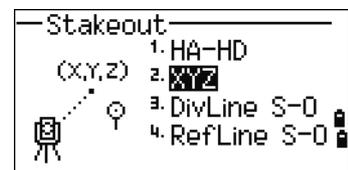

2. Enter the point name that you want to stake and press ⌷ENT⌷.

    You can also specify the point by code or radius from the instrument.

If several points are found, they are displayed in a list. Use ⌃ or ⌄ to move up and down the list. Use ⌐ or ⌐ to move up or down one page.

```
UP,A100,FENCE
UP,A101,
UP,A100-1,MANHOLE
UP,A100-2,
UP,A100-4,
UP,A100-6,CODECODE
UP,A1000,
```

3. Highlight a point in the list and press ⌑ENT⌑.

The delta angle and the distance to the target are shown.

```
PT:A100-2
dHA:    0°00'00"
 HD:      87.541 m

   * Sight the target
    and Press [MSR]
```

4. Rotate the instrument until the dHA is close to 0°00'00". Press ⌑MSR1⌑ or ⌑MSR2⌑.

dHA	Difference in horizontal angle to the target point
HD	Distance to the target point

5. Ask the rodman to adjust the target position. When the target is on the intended position, the displayed errors become 0.000 m (or 0.000 ft).

dHA	Difference in horizontal angle to the target point
R/L	Right/Left (Lateral error)
IN/OUT	In/Out (Longitudinal error)
CUT/FILL	Cut/FilL

```
PT: A100-2           1/7
dHA←    0°00'26"
 R  ←      0.055 m
IN  ↓      0.920 m
FIL↑      0.036 m
 * Press [ENT] to record
```
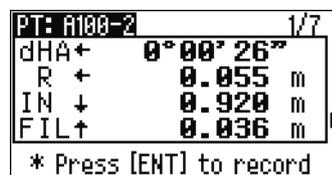

To switch between display screens, press ⌑DSP⌑. This function works as in the angle-distance stakeout, except that the screen counter (for example, S-O1/8) is not displayed. For more information, see Using [DSP] to switch between display screens, page 66.

Once a measurement is taken, the Cut/Fill value and Z coordinate are updated as the VA is changed.

6. To record the point, press ⌑ENT⌑. PT defaults to the specified PT + 1000.

```
N:       567.308
E:      -121.146
Z:         0.580
PT:A100-1002
CD:CURB
              List  Stack
```
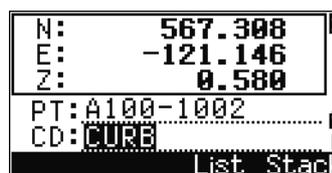

Use the Add Constant field in MENU > Settings > Stakeout to specify an integer that is added to the point number being staked to generate a new number for recording the staked point. The default value is 1000. For example, when you stake out PT3 with an Add Constant of 1000, the default number for SO record is 1003. For more information, see Stakeout, page 111.

```
<Stakeout>
   Add PT : 1000
```
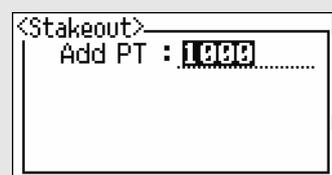

After recording the point, the display returns to the observation screen. When you press ⌑ESC⌑, the display returns to the PT/CD/R input screen. If you entered the stakeout point using a single point name, the PT defaults to the last PT + 1.

```
PT:68               2/7
HA:     37°16'29"
VD:        0.728 m
HD:      101.902 m
 * Hold [MSR] for 1sec
   to change MSR mode
```
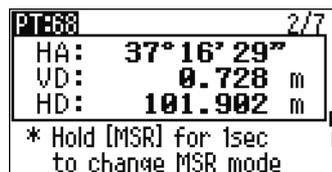

If you selected a point from the list, the display returns to the list, unless all points have been selected. Press [ESC] to return to the point input screen.

```

```
DivLine S-O

This function divides the line between the instrument and the first target by an input span number. It then guides you to stake out the points, one by one.

1. Press [3] or select DivLine S-O in the Stakeout menu.

```
─Stakeout─
     1. HA-HD
     2. XYZ
     3. DivLine S-O
     4. RefLine S-O
```

2. Set up the baseline. To do this, sight the target on the line (the end point) and press [MSR1] or [MSR2].

```
LineS-O
HA:209°35'46"
HD:              m

* Sight END-Pt and [MSR]
```
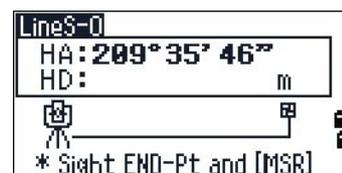

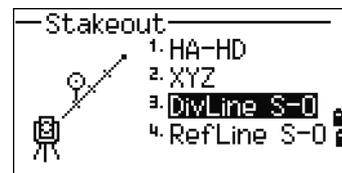

3. Enter the total stake number in the Span total field.

```
LineS-O                    1
 HA:  209°35'46"
 HD:    148.260 m
  ⊕ |__|_:_|_:_|_:_| 🗗  ▯
  Span total :▮
```
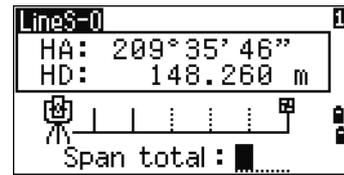

The observation screen for the first stake (from the instrument) appears.

```
LineS-O      <1/4>
 HD:      10.065 m
 L  ←      0.156 m
 In ↓      0.340 m
 * [↓] = Go to next nail
   [↑] = Back to prev nail
```

4. Sight the prism and press [MSR1] or [MSR2].
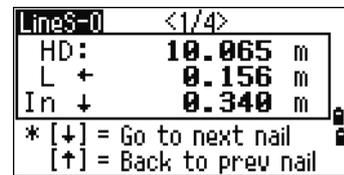

5. Use [˄] or [˅] to change the guide point. You can calculate and guide up to double the number of the stakes.

```
LineS-O      <2/4>
 HD:      20.130 m
 L  ←      0.150 m
 Out↑     10.405 m
 * [↓] → Go to next nail
   [↑] → Back to prev nail
```

6. To record the point as an SO record, press [ENT].

```
 X:      102.015    8
 Y:      184.172
 Z:       70.448
 PT:102
 CD:CURB
                List  Stack
```
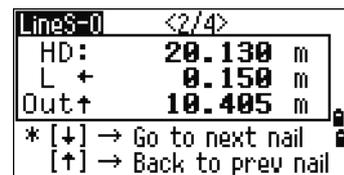

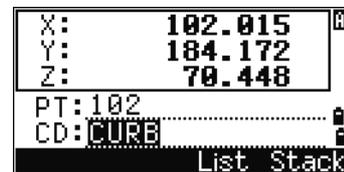

For example, if you measure to the end point at 100 m from the instrument and set the span total to 2, the following four points are calculated and can be staked:

	<1/2>	<2/2>	<3/2>	<4/2>
HD	50 m	100 m	150 m	200 m
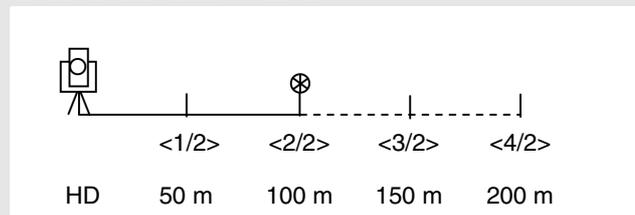

RefLine S-O

This function allows you to stake out a point based on the Sta, O/S, and dZ to a specified line.

1. Press [4] or select
   RefLine S-O in the Stakeout menu.

```
─Stakeout─────────
          ·. ¹·HA-HD
          ·  ²·XYZ
  Sta ⟋⟍◯  ³·DivLine S-O
  ⊕  ⟋ o/s  ⁴·RefLine S-O
  ⌂
```
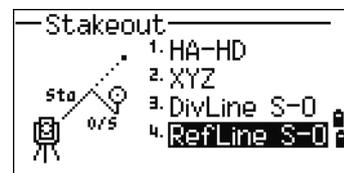

2. Enter the first point (P1) of the line.

```

Measuring distance and offset values on the arc-curve

1. Press ② or select `Arc RefLine` in the Programs menu.

2. Enter the start of the curve point (P1) and the azimuth of its tangent line (AZ1).

3. To enter P1 by direct measurement, press the `MSR` softkey.

4. Choose a method to define the arc.
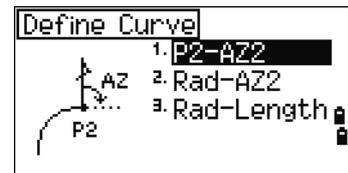

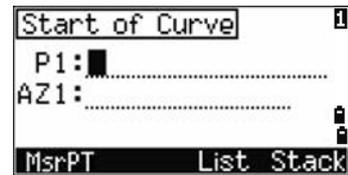

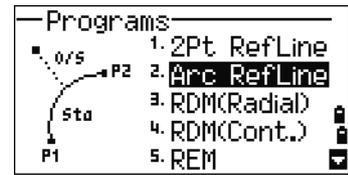

P2 can be any point on the tangent line that is to exit the curve.

5. In the radius (Rad) field, enter a positive value for a clockwise curve. Enter a negative value for a counterclockwise curve.
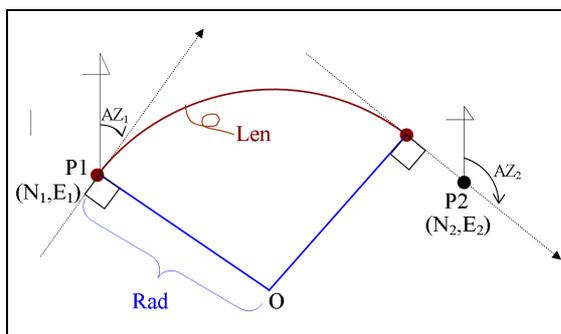

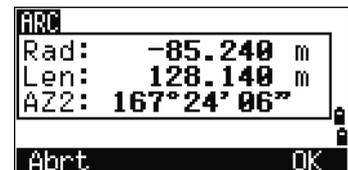

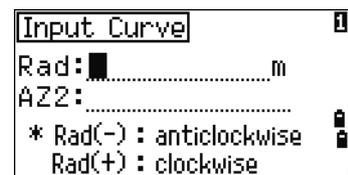

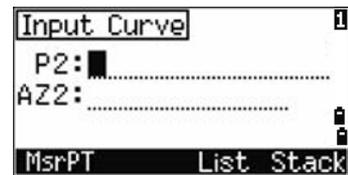

When all factors have been entered, the instrument calculates the curve.

If the curve length (Len) is too large for a circle of the given radius, it is shortened.

Remote distance measurement

This function measures the horizontal distance, vertical distance, and slope distance between two points.
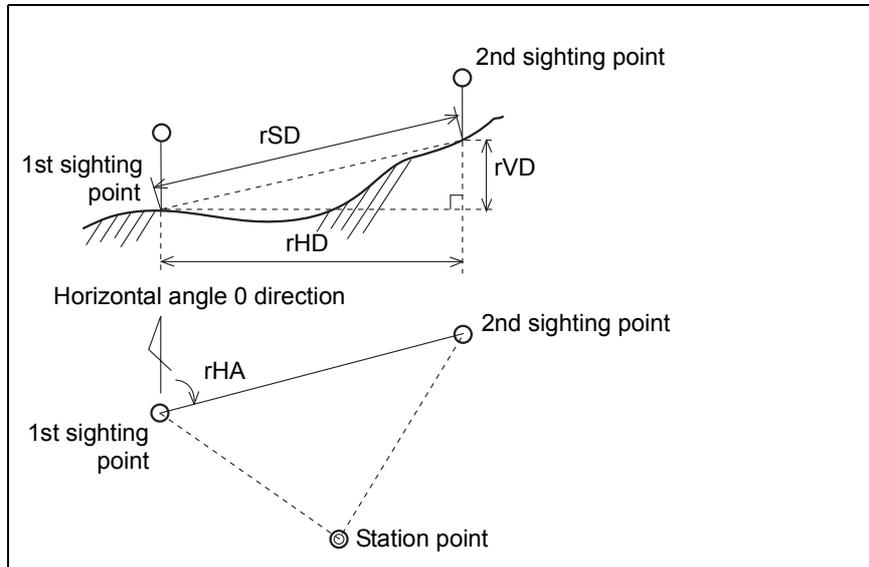

rSD	Slope distance between two points
rHD	Horizontal distance between two points
rVD	Vertical distance between two points
rV%	Percentage of grade (rVD/rHD) × 100%
rGD	Vertical grade (rHD/rVD) :1
rAZ	Azimuth from first point to second point

Measuring between the current and the first point measured

1. To enter the RDM (Radial) function, press ③ or select RDM(Radial) in the Programs menu.

2. Sight the first point and press [MSR1] or [MSR2].
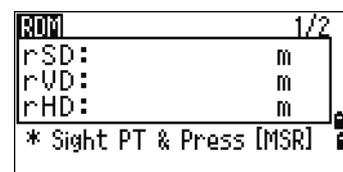

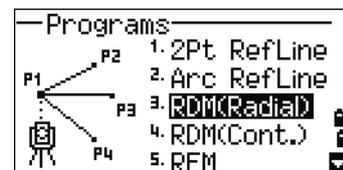

The distance from the station point to the first point appears.
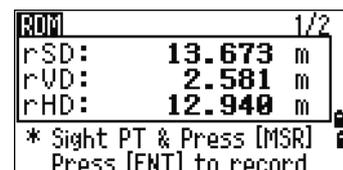

3. Sight the second point and press [MSR1] or [MSR2]. The distances between the first and second point are displayed.

rSD   Slope distance between two points

rVD   Vertical distance between two points

rHD   Horizontal distance between two points

4. To change display screens, press [DSP].

rAZ   Azimuth from first point to second point

rV%   Percentage of grade (rVD/rHD) × 100%

rGD   Vertical grade (rHD/rVD) :1

5. To record the distance and angle information as a comment record, press [ENT] in the 1/2 or 2/2 observation screen.

Default point numbers are displayed. You can change these point numbers. To record a note, press [ENT] in the To field.
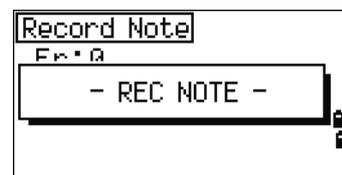

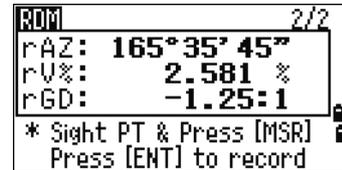

Data that you save in RDM functions is stored in RM records. For more information, see . When you download data in Nikon RAW format, they are output as comment (CO) records.

Measuring between the current point and the immediately preceding point

1. To enter the RDM (Continuous) function, press [4] or select RDM(Cont.) in the Programs menu.

2. Follow the procedure as for a radial RDM measurement. For more information, see .

Difference between "1:Cont." and "2:Radial"

1:Cont.
(The preceding two points are subject to calculation.)

2:Radial.
(Calculations are made with reference to the first point.)

Measuring remote elevation

$$Vh = HD \cdot \tan(90° - \theta) - VD + HT$$

A prism is required only at the sighting (target) point
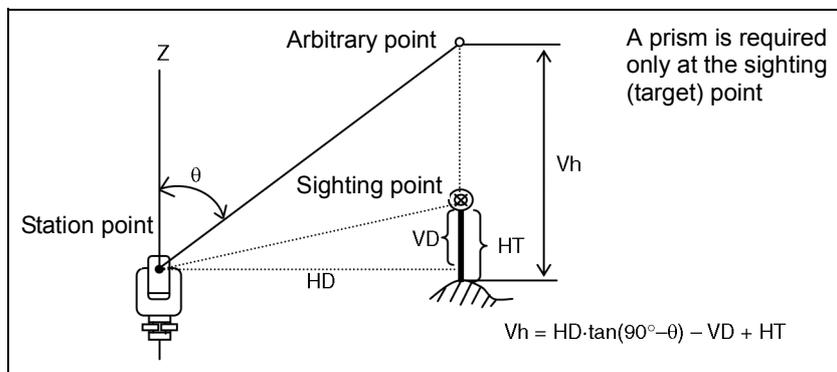

1. To enter the Remote Elevation Measurement function, press [5] or select REM in the Programs menu.

   ```
   ─Programs───────────
      1. 2Pt RefLine
      2. Arc RefLine
      3. RDM(Radial)
      4. RDM(Cont.)
      5. REM
   ```

2. Enter the height of target.

   ```
   REM                    1
   HT: 0.000          m
   Vh:                m

   * Input the HT first
   ```

3. Sight the target point and press [MSR1] or [MSR2].

   ```
   REM
   HT:        1.774  m
   Vh:               m

   * Sight a point and
       Press [MSR]
   ```
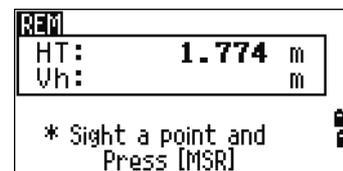

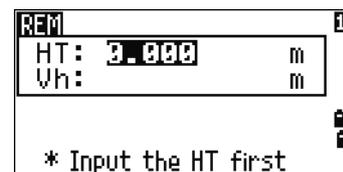

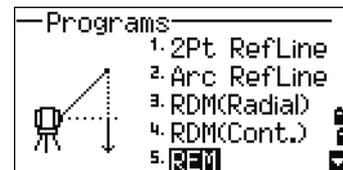

4. Loosen the vertical clamp, and turn the telescope to aim at an arbitrary point.

    The difference in elevation (Vh) appears.

```
REM
 HT:          1.774  m
 Vh:          2.075  m

* Press [ENT] to update
  Height of Target
```
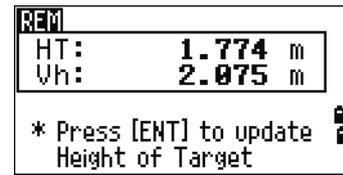

You can use an REM measurement to update the height of target. Take a measurement to the prism, sight the bottom of the prism pole, and press [ENT].

Measuring distance and offset values on the vertical plane
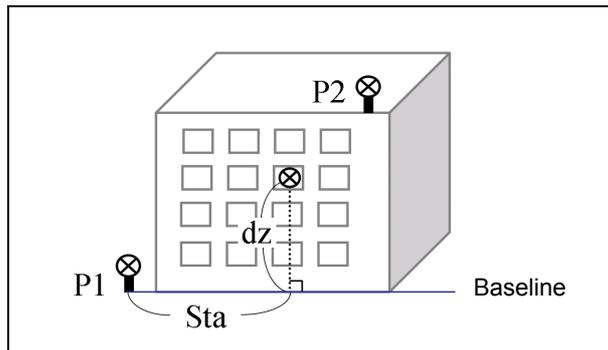

1. To enter the 2-Pt Reference Plane function, press
    [6] or select
    V-Plane in the Programs menu.

```
-Programs-
               6. V-Plane
               7. S-Plane
   P1
        P2
```
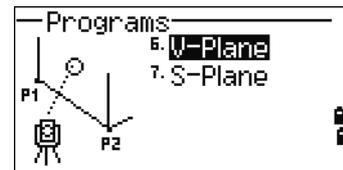

2. Enter two points to define the plane.

    To enter the point by direct measurement, press the MsrPT softkey.

```
Input Plane P1
  P1:
  P2:

MsrPT          List Stack
```
    When you press the MSR softkey, a temporary observation screen appears.

3. Press [MSR1] or [MSR2]. The Record PT screen appears.

```
 HA:  147°29' 11"
 VA:   90°27' 48"
 SD:              m
 HT:    1.555    m
* Sight PT & Press [MSR]
             HT
```

4. Enter a value in the PT and CD fields. Press [ENT].

```
 N:        567.308
 E:       -121.146
 Z:          0.580
PT:56
CD:CURB
             List Stack
```
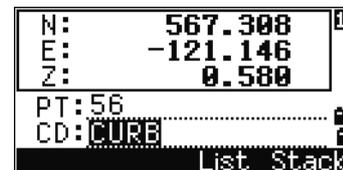

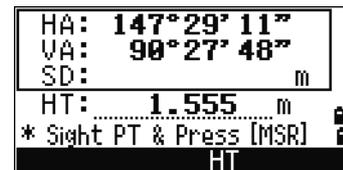

5.   Enter the second point on the vertical plane. Press [ENT].

```
Input Plane P2        [1]
 P1:56.................
 P2:█.................
                     [battery]
MsrPT         List Stack
```
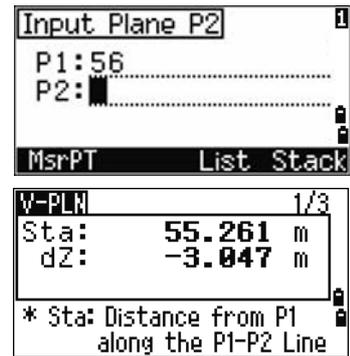

Once the plane is defined, the calculated Sta and dZ values are updated as you move the telescope. No distance measurement is required.

```
V-PLN               1/3
Sta:      55.261  m
 dZ:      -3.047  m

* Sta: Distance from P1
       along the P1-P2 Line
```

Sta   Horizontal distance from P1 to the target point along the baseline

dZ   Vertical distance from P1 to the target point

Using [DSP] to switch between display screens

Press [DSP] to switch between the plane display screens. The following screens are available:

PLN1

```
    Sta
    dZ
```

PLN2

```
    X
    Y
    Z
```

PLN3

```
    HA
    VA
```
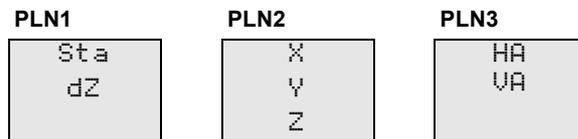

Every time you press [DSP], the next screen appears. If you press [DSP] in the last screen (PLN3), the PLN1 screen appears.

To record the point, press [ENT] on any screen (V-PLN1/3 to V-PLN3/3).

```
HA:   40°29'11"     [M]
VA:   89°07'46"
SD:      79.402  m
PT:70.................
CD:KERB.............
              List Stack
```

Enter PT and CD. Then press [ENT].
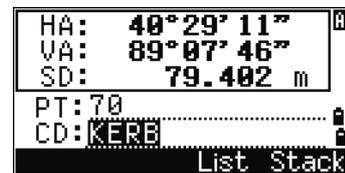

Sample records

Measuring distance and offset values on the slope
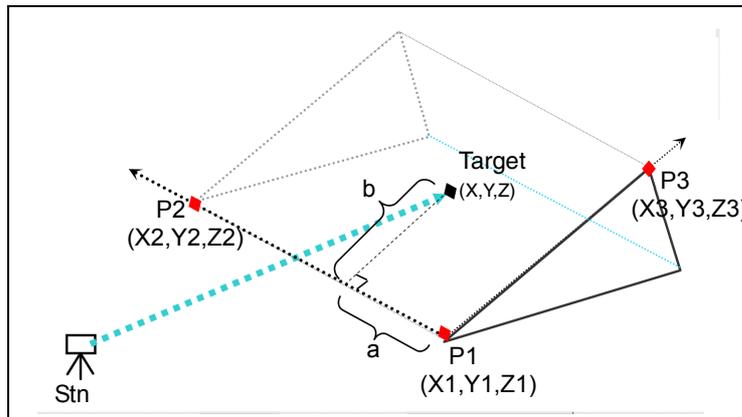

1. To enter the 3-Pt Reference Plane function, press
   ⑦ or select
   S-Plane in the Programs menu.

2. Enter three points to define the slope plane. To
   enter the point by direct measurement, press the
   MSR softkey.
   If you press ⟨ENT⟩ in a blank field, an input screen
   for temporary coordinates appears. These
   coordinates will not be stored.
   When you have entered the temporary
   coordinates, ⟨Keyed-in XYZ⟩ appears
   instead of the PT name.

If the plane is defined by two points (by selecting 2Pt), the vertical
plane is the same as the plane used in the V-Pln function, but the
indicating factors are Sta and dZ, not a and b. For more information, see
Measuring distance and offset values on the vertical plane, page 78.
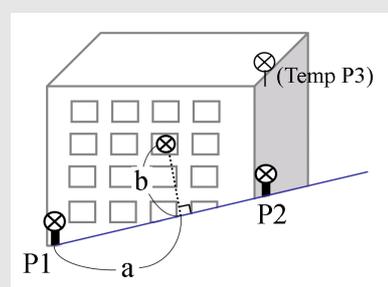

Once the plane is defined, the calculated a and b values are updated as you move the telescope. No distance measurement is required.

```
S-PLN            1/3
 a :       -0.214  m
 b :        3.502  m

* a: Distance from P1
  b: O/S from P1-P2 Line
```

a   Distance between P1 and the point that is perpendicular to the target point along the P1-P2 line

b   Length of the perpendicular line from the target point to the P1-P2 line
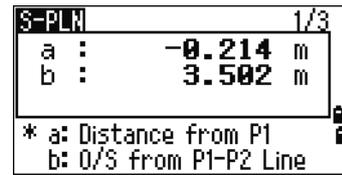

Using ⟨DSP⟩ to switch between display screens

Press ⟨DSP⟩ to switch between the plane display screens. The following screens are available:

PLN1
```
      a
      b
```

PLN2
```
      X
      Y
      Z
```

Recording Measurement Data

Recording data from any observation screen

To record points on observation screens, press ⟨ENT⟩.

PT defaults to the last recorded PT + 1.

You can enter the PT name from the point list or the point stack. For more information, see Entering a point from the point list, page 42, and Entering a point from the stack, page 42.

```
Record PT
 PT:208
 HT:     1.702  m
 CD:HUB
            List Stack
```

You can also use the code list or the code stack. For more information, see Entering a code from the code list, page 43, and Entering a code from the stack, page 43.

To record the point, press ENT on the last field.

When recording sideshots, stakeout records and control shots from the Rept function, you can choose to store raw data only, XYZ data only, or both. For more information, see Recording, page 112.
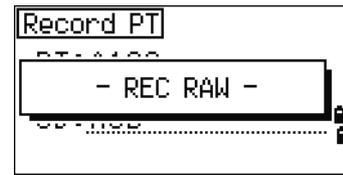

If HA or VA is moved after you take a measurement but before you press ENT, the angle recorded is the angle shown when ENT is pressed.

In an angle-only record, SD is always recorded as 0.0000.

If the point name that you want to record already exists in the job, an error message appears. Depending on the type of existing record, you can overwrite the old record with the new data. For more information, see Recording Data, page 173.
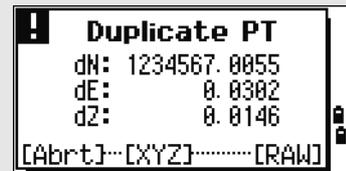

Hold down ENT for one second to record the measurement as a CP record.

Outputting data to the COM port

If you press ENT while the COM icon appears in an observation screen, a line of data is output to the COM port.
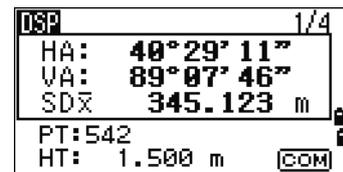

Note – If COM *appears, data is **not** stored to the job when you press* ENT.

The format of the output data is defined by the setting of the Ext.Comm field in MENU > Settings > Comm. For more information, see Communications, page 111.
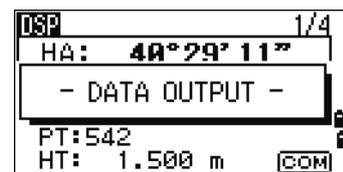

To output data on the COM port when you press ENT, set the Data Rec field in MENU > Settings > Rec to COM. For more information, see Recording, page 112.
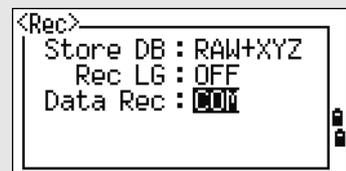

Sample output records through COM port

When the Ext.Comm field is set to NIKON:

TR PN: PT8 SD:000066626 HA:003856010 VA:008048500 HT:0000061757

(TR PN: point name SD HA VA HT; when ACK is returned, PN is incremented.)

When the Ext.Comm field is set to SET:

0006662 0804806 0394324 97

(SD VA HA Chk-SUM)

Measuring Offsets

Measuring taped offsets

1. To enter the taped offset function, press ① or select `Tape` in the Offset menu.

    If you have not taken a distance measurement before entering this function, a temporary measurement screen appears.

2. Sight the target and press [MSR1] or [MSR2].

3. Enter offset distances from the measured point. Use ⌃ or ⌄ to move to the appropriate offset field.
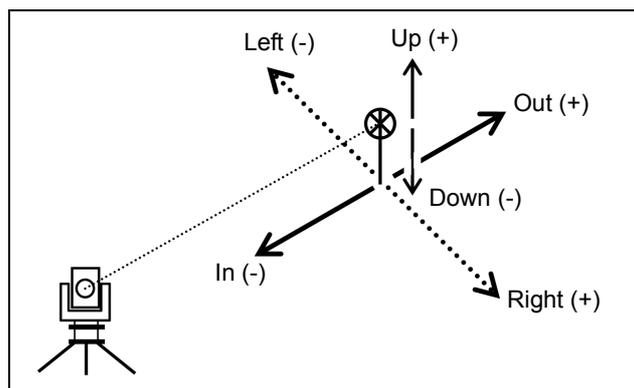

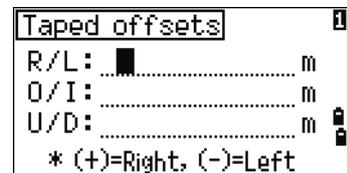

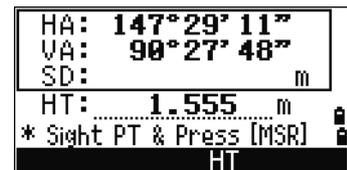

You can enter any combination of taped offset distances to specify the point.

```
┌Taped offsets┐      ▣
R/L:        0.502 m
O/I:      -30.000 m
U/D: 1.500▉        m ▯
  * (+)=Up, (-)=Down
```

4. To go to the recording PT screen, press [ENT] in the last field.

    The calculated coordinates are shown.

```
X:        102.015  ▣
Y:        184.172
Z:         70.448
PT:102
CD:CURB              
            List Stack
```

5. Enter a PT (and CD) value.

6. Press [ENT] to record the point.

    Raw data is also recalculated, based on the taped offset value.
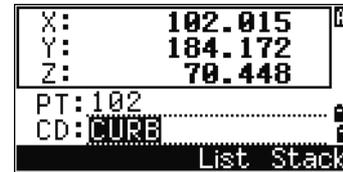

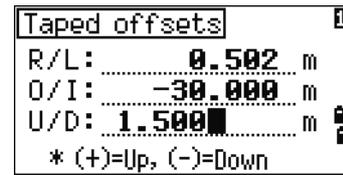

Measuring angle offsets

1. To enter the angle offset function, press [2] or select Angle in the Offset menu.
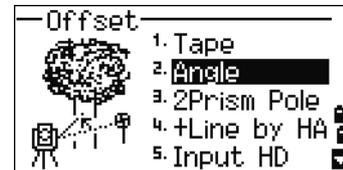

```
┌Offset─────────
       1. Tape
       2. Angle
       3. 2Prism Pole
       4. +Line by HA▯
       5. Input HD   ▮
```

    If you have not taken a distance measurement before entering this function, a temporary measurement screen appears.

```
HA: 147°29' 11"
VA:  90°27' 48"
SD:           m
HT:  1.555  m ▯
* Sight PT & Press [MSR]
         HT
```

2. Sight the target and press [MSR1] or [MSR2].

3. To take the angle offset, rotate the alidade and telescope. The measured distance (HD) remains unchanged.

```
O/S           1/4
HA: 140°29' 11"
VA:  89°07' 46"
SDx̄  128.607  m ▯
* Take the Angle O/S ▯
Abrt           OK
```

4. To record the offset point, press [ENT] or the OK softkey.
    The XYZ data is also recalculated, based on the new angle.

You can record an angle offset in the Basic Measurement Screen (BMS). After taking a distance measurement, rotate the alidade and/or telescope. Then press [ENT] to record the measured distance with the updated angle value. If you use this method, the dimension of the angle offset is not stored as a CO record. To store the CO record, use the O/S function.

Two-prism pole

1. To enter the two-prism pole function, press ③ or select 2Prism Pole in the Offset menu.

2. Sight the first prism and press [MSR1] or [MSR2].

3. Sight the second prism and press [MSR1] or [MSR2].

4. Enter the distance between the second prism and the target point. Alternatively, if you do not need QA information, you can leave the distance between the first and the second prism blank.

5. If you do enter a P1-P2 distance, the QA screen appears. Compare the entered value and the measured distance to check the accuracy of the observation.

6. To record the point, press [ENT] or the OK softkey.
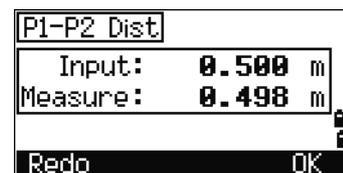

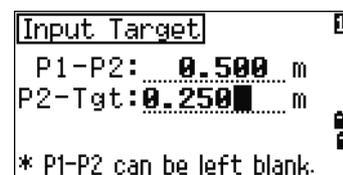

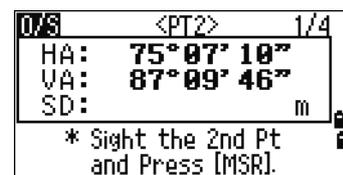

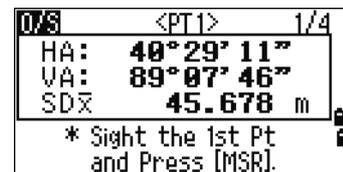

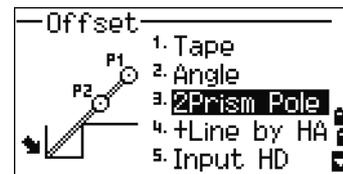

Sample records

SS,14,0.0000,38.9200,271.0350,89.2630,11:04:15,DITCH
CO,2Prism O/S: P1-P2= 0.5090(0.5060) P2-Tgt= 0.5020

Note – In this sample data, 0.5090 is the measured value. 0.5060 is the entered value.

Extending a line by horizontal angle offset

1. To enter the line extension (by HA) function, press 4 or select +Line by HA in the Offset menu.
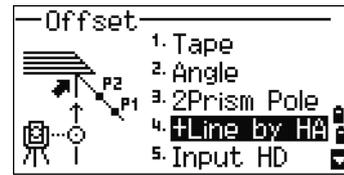

2. Sight the first prism (or target) and press [MSR1] or [MSR2].

   The display moves to the next screen.
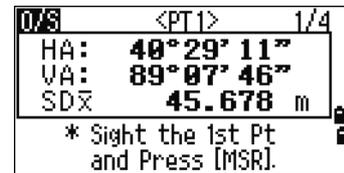

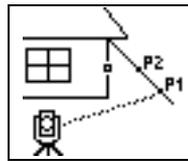

3. Sight the second prism (or target) and press [MSR1] or [MSR2].
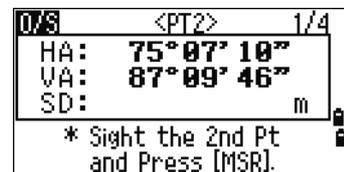

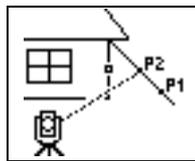

4. Sight the alternative place on the same vertical line as the required target point.
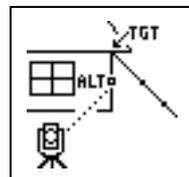

5. To calculate the coordinates and the raw data of the target point, press [ENT].

6. To record the point, enter a PT (and CD) value and press [ENT]. The height of target is fixed to 0.0000 for the offset point.
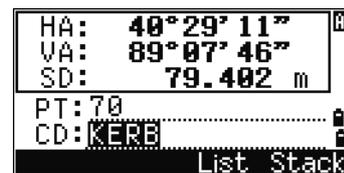

Sample records

SS, 40, 0.0000, 48.3304, 169.20370, 82.02470, 10:52:37
CO, PT1, 0.0000, 48.3020,169.19165, 83.58565
CO, PT2, 0.0000, 48.3155,168.54250, 85.42440
CO, O/S MSR:40 0.0000 0.0000 169.20370 87.02340

The calculated point (TGT) is stored as a SS record.

Measurements to the first and second target (P1 and P2) are stored as comment records (PT1 and PT2). The last record records the angle measurement to the ALT (vertically offset point from the actual target point).

Entering a horizontal distance after an angle-only shot

This function is useful when the instrument is very close to the point and it is difficult to take a measurement using the EDM.

1. To enter the Input HD function, press ⑤ or select Input HD in the Offset menu.
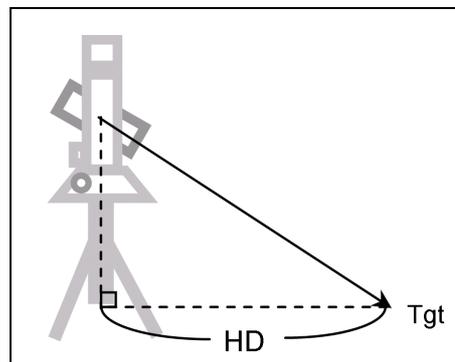

2. Turn the telescope in the direction of the point that you want to store.

3. Enter the HD. Usually this is the taped distance from the instrument point.

4. Enter a PT (and CD) value and press ENT.

    The target point is calculated and recorded as an SS record.
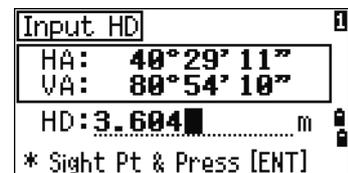

Sample records

SS,158,0.0000,77.0518,62.08380,108.06510,11:51:48,
CO, Input HD:76.1243

Calculating a corner point

1. To enter the corner point function, press ⑥ or select `Corner` in the Offset menu.

```
-Offset-
            ⁶·Corner
P3          ⁷·Circle
      P2■   ⁸·Input dSD
      P1■
```

2. Take a distance measurement to the first prism (or target) on the wall. Press [MSR1] or [MSR2].

```
O/S         <PT1>     1/4
HA:    40°29'11"
VA:    89°07'46"
SDx̄      45.678  m
   * Sight the 1st Pt
     and Press [MSR].
```

3. Sight a second point on the same wall with the first point measurement. Press [MSR1] or [MSR2].

```
            ●P2
  ⛫      ●P1
```
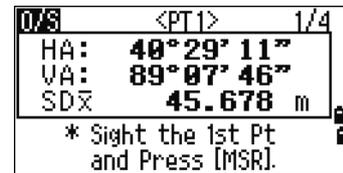

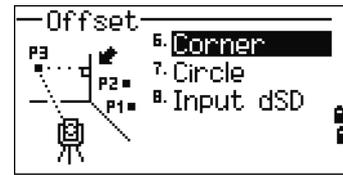

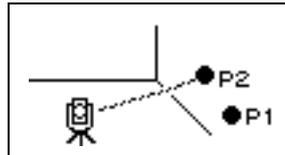

4. Sight the first point on the second wall. Press [MSR1] or [MSR2].

```
O/S         <PT2>     1/4
HA:    75°07'10"
VA:    87°09'46"
SD:              m
   * Sight the 2nd Pt
     and Press [MSR].
```

```
P3
 ●            ←
         ●P2
 ⛫    ●P1
```
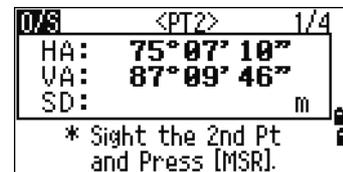

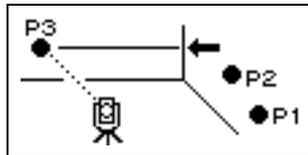

5. If the two walls are at right angles, press the `Calc` softkey to calculate the corner point by three points.

```
O/S         <PT3>     1/4
HA:    94°01'32"
VA:    87°09'46"
SD:              m
   * Sight the 3rd Pt
     and Press [MSR].
```
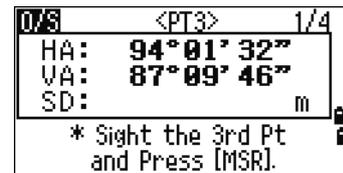

6. If you take a measurement to a fourth point, the corner point can be calculated as the intersection of two walls (P1-P2 and P3-P4). The default elevation is given by P4.

```
O/S         <PT4>     1/4
HA:   128°50'37"
VA:    87°09'46"
SD:              m
MSR1  MSR2  DSP   Calc
```

```
    P4
P3  ●   ←
 ●      ●P2
 ⛫   ●P1
```
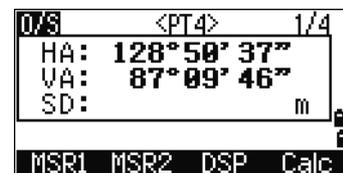

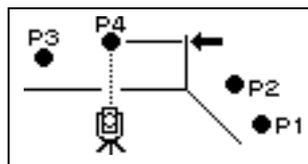

7. Enter a PT (and CD) value. The height of target (HT) defaults to the value used in the last measurement.

8. To record the corner point, press [ENT].

```
Record PT            1
 PT:A102
 HT:    1.702  m
 CD:HUB
            List  Stack
```

Sample records

SS, 58, 0.0000, 48.3304, 169.19165, 82.02470, 10:52:37, FLOOR2
CO, PT1, 1.0080, 48.3020,169.19165, 83.58565
CO, PT2, 1.0080, 48.3155,128.54250, 85.42440
CO, O/S MSR:40 0.0000 0.0000 169.20370 87.02340

The calculated corner point is stored as an SS record.

The next three or four comment records are measured points. For example:
CO, Point name (fixed to PT1, PT2 etc.), HT, SD, HA, VA.

Measuring circle offsets

1. To enter the circle center calculation function, press [7] or select Circle in the Offset menu.
   If you have not taken a measurement to the circle before entering this function, a temporary measurement screen appears.
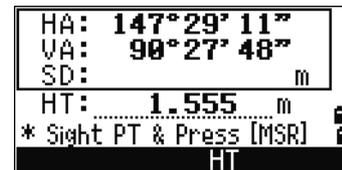

2. Sight any point on the surface of the circle and press [MSR1] or [MSR2].
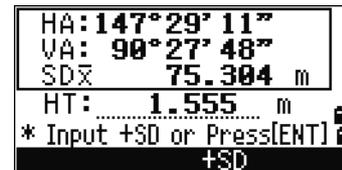

If you use a prism attached to the surface of the circle for the distance measurement, press the +SD softkey to eliminate the offset error (from the attached point to the measured surface of the prism) before you press [ENT].

3. Sight one edge of the circle and press [ENT].
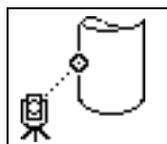

If you have taken a distance measurement to the center of the circle, press the Calc softkey to calculate the offset using one edge angle observation.

4. Sight the other edge of the circle and press [ENT].
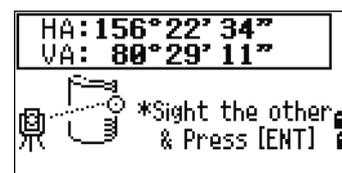

The instrument calculates and records the center of the circle.
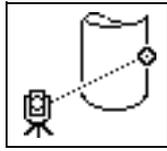

It also calculates the coordinates of the center point and the radius of the circle.

5. To record the point, press [ENT] or the OK softkey.

Sample records

SS,71,1.5000,37.0518,32.08380,81.06510,11:51:48,
CO, PT1, 0.0000, 0.0000,47.05350, 83.58560
CO, PT2, 0.0000, 0.0000, 29.53010, 83.58560
CO,O/S MSR:71 1.5555 36.5418 38.28360 81.06510
CO,Radius of circle 0.356
CO,Input +SD:0.0020
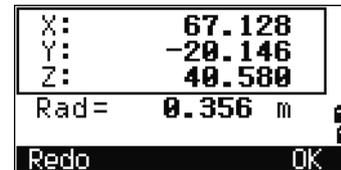

The calculated point (center of the circle) is stored as an SS record.
The following one or two comment records are angle-measured points. For example:
CO, Point name (fixed to PT1/ PT2), HT(0.0000), SD(0.0000), HA, VA.
If you press the +SD softkey before you sight Edge1, the input value is recorded at the end.

Extending the slope distance

1. To enter the function for extending the slope distance, press [8] or select Input dSD in the Offset menu.
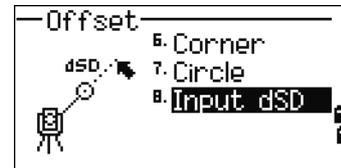

If you have not taken a distance measurement before entering this function, a temporary measurement screen appears.
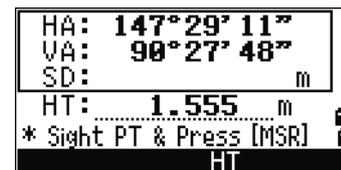

2. Enter the slope distance that you need to add or subtract. You can enter any value from –99.990 through +99.990 m (–328.000 through +328.000 ft).

3. To record the point, press [ENT].
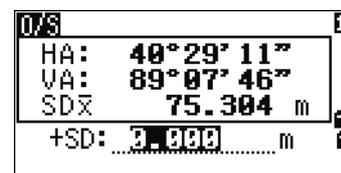

Sample records

SS,83,1.5000,77.0518,62.08380,81.06510,11:51:48,
CO,O/S MSR:83 1.5555 76.5518 62.08380 81.06510

Menu Key

In this chapter:

Introduction

Use the MENU screen to access important functions and settings.

To display the MENU screen, press the [MENU] key.

Job Manager

Use the job manager to open, create, delete, and manage jobs. To open the Job Manager, press [1] or select Job on the MENU screen.

If there are jobs stored on the instrument, the job list appears, showing all the stored jobs. The newest job appears at the top of the list.

If there are no jobs stored, the Create Job screen appears. See Creating a new job, page 93.

Opening an existing job

The job list shows all the jobs stored on the instrument, in descending date order.

The following symbols may be used to provide extra information about jobs:

Symbol	Meaning
*	Current job.
@	Control job.
!	Some of the job settings are different from the current job.
?	Job was created in an older DB. Older files cannot be opened in version 1.10 or later of the software.

Press [^] or [v] to move up or down the job list. Press [ENT] to open the highlighted job.

When you open a job, all job settings are automatically changed to match those used in the open job.

Creating a new job

1. Press the Creat softkey in the job list.

2. Enter a job name of up to eight characters. Press
    [ENT].

3. Do one of the following:

    −   To check the job settings, press the Sett
        softkey.

    −   To create a new job using the current job
        settings, press [ENT] or the OK softkey.
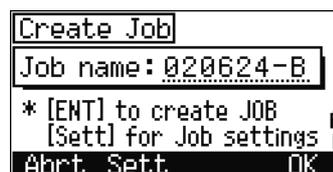

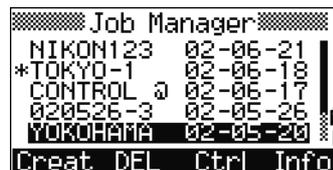

Job settings

The following settings are set when a job is created, and cannot be changed. This
ensures that the data in a job is correctly stored in the database, and that all necessary
corrections are applied when you store each record.

Scale Factor	0.999600 to 1.000400
T-P correction	ON/OFF
Sea Level	ON/OFF
C&R correction	OFF/0.132/0.200
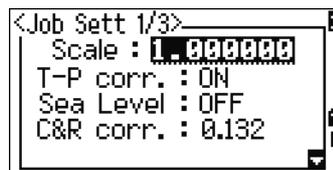

Angle unit	DEG/GON/MIL
Distance unit	Metre/US-Ft/I-Ft
Temp unit	°C/°F
Press unit	hPa/mmHg/inHg

If you select US-Ft or I-Ft, an additional settings screen appears. Use this
screen to specify whether to display values in Decimal-Ft or Ft-Inch.

VA zero	Zenith/Horizon/Compass
AZ zero	North/South
Order	NEZ/ENZ
HA	Azimuth/0 to BS
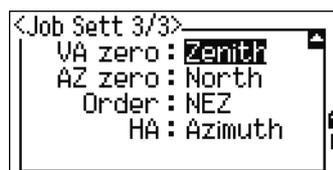

To move between fields, press ⌃ or ⌄. Alternatively, to move to the next field, press
ENT.

To change the setting in the selected field, press ◁ or ▷.

To confirm the job settings and create the job, press ENT in the last field (HA).

These settings are separate from other temporary settings.

Deleting a job

Tip – There is no undelete function in the Job Manager. Before you press ENT or select DEL,
make sure that the selected job is the one that you want to delete.

1. In the job list, highlight the job that you want to delete.

```
▓▓▓▓Job Manager▓▓▓▓
 NIKON123   02-06-21
*TOKYO-1    02-06-18
 CONTROL ⓐ  02-06-17
 020526-3   02-05-26
 YOKOHAMA   02-05-20
Creat  DEL   Ctrl  Info
```

2. Press the DEL softkey. A confirmation screen appears.
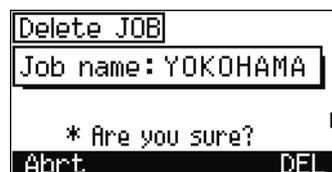

3. Do one of the following:

   – To delete the selected job, press ENT or the DEL softkey.

```
Delete JOB
Job name: YOKOHAMA

   * Are you sure?
Abrt                  DEL
```

   – To cancel the deletion and return to the previous screen, press ESC or the Abrt softkey.

   After you delete a job, the display returns to the job list.

```
Delete JOB

 – Deleting Job –
```

Setting the control job

If you search for a point when a control job is specified, and the system cannot find
the point in the current job, the control job is also searched. If the point is found in the
control job, it is copied to the current job as a UP record.

A control job has the same format as a standard job. You can open and modify it like
any other job, and you can use it to record any measured data.

To set the control job:

1. Highlight the job that you want to use.

2. Press the Ctrl softkey.

```
▓▓▓▓Job Manager▓▓▓▓
 NIKON123   02-06-21
*TOKYO-1    02-06-18
 CONTROL ⓐ  02-06-17
 020526-3   02-05-26
 YOKOHAMA   02-05-20
Creat  DEL   Ctrl  Info
```

A confirmation screen appears.

3. Do one of the following:

    –   To set the selected job as the control job,
        press [ENT] or the Yes softkey.

    –   To cancel the process, press [ESC] or the No
        softkey.

```
┌─────────────────────┐
│Control Job <ON>     │
├─────────────────────┤
│Job name: NIKON123   │
│                     │
│  * Set this Job as  │
│    the Control Job? █│
│                     █│
│No              Yes  │
└─────────────────────┘
```
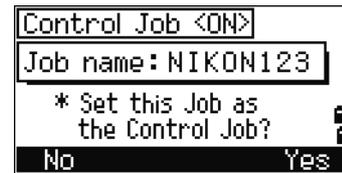

If a control job is already assigned, the newly assigned control job replaces it
as the control job.

To clear the control job selected, highlight the current control job in the job list
and press the Ctrl softkey. Then press [ENT] or the Yes softkey to confirm.

```
┌─────────────────────┐
│Control Job <OFF>    │
├─────────────────────┤
│Job name: CONTROL3   │
│                     │

Cogo

Use the Cogo menu to perform coordinate geometry (COGO) calculations. You can access this menu at any time from any observation or PT input screen.

To open the Cogo menu, press ② or select Cogo on the MENU screen.

```
┌─Cogo──────────────────┐
│  4        ¹·Inverse    │
│       P2  ²·Input      │
│    ⌐        ³·Area & Perim
│             ⁴·Line & O/S│
│  P1         ⁵·Intersection
│          P3            │
└───────────────────────┘
```

Calculating angle and distance between two coordinates

To open the Inverse menu, press ① or select Inverse in the Cogo menu.

PT-PT inverse

PT-PT calculates the distance and the angle between two input points.

To calculate a PT-PT inverse:

1. Press ① or select PT-PT in the Inverse menu.

```
┌─Inverse───────────────┐
│  4      ¹·PT-PT        │
│   AZ     ²·3Pt Angle   │
│    ⌐  P2               │
│  P1                    │
└───────────────────────┘
```
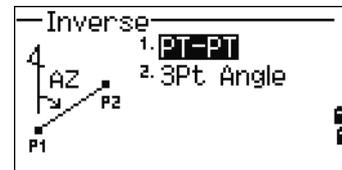

2. Enter the first point number or name. Press ENT.

```
┌────────────────────────┐
│ Input P1    4   .P2  │
│           P1 ⌐         │
│                        │
│ P1:340█                │
│ P2:                    │
│ MsrPT        List Stack│
└────────────────────────┘
```
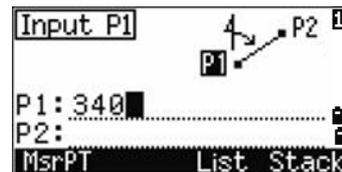

If you press ENT without entering a point name, a coordinate input screen appears, and you can enter coordinates. These coordinates are *not* stored to the database. If you want to store the point, specify a new point name.

3. Type the second point number/name and press ENT. The MSR softkey allows you to shoot the point on the spot to use it in the calculation.

```
┌────────────────────────┐

3Pt angle

The 3Pt Angle function calculates the angle between two lines defined by three points.

To calculate a 3Pt angle:

1. Press ② or select 3Pt Angle in the Inverse menu.

```
┌─────────────────────────┐
│ ┌Inverse──────────────  │
│        1.PT-PT          │
│    P2  2.3Pt Angle      │
│      ↘                  │
│    ⊿ dHA               │
│  P1    ●  P3            │
└─────────────────────────┘
```

P1 is the base point. Two lines are to be defined by P2 and P3, both from P1.

2. Enter the point name, or use the MSR softkey to take a measurement to the point.

```
┌─────────────────────────┐
│ Input BasePt    1 2 3   │
│                         │
│ P1:█                    │

```
Traverse

To open the Traverse (2Pt Angle) function, press ② or select `Traverse` in the Input menu.

Traverse function calculates a new point based on the two defined points and angle, horizontal and vertical distances from the line defined by those two points.

To enter P1 and P2, enter point names or take measurements to targets.

Enter the plus-minus angle, horizontal distance, and vertical distance from the baseline defined by P1-P2.

If you do not enter a value in the dVD field, the value 0.000 is used.

When you press ⎡ENT⎤ in the dVD field, a new point is calculated. The PT name defaults to the last recorded PT + 1.

To record the new point and return to the point input screen, press ⎡ENT⎤.

P1 (base PT) defaults to the previously recorded PT. P2 defaults to the previous P1.
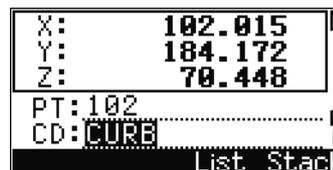

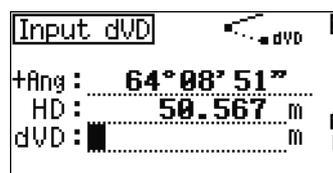

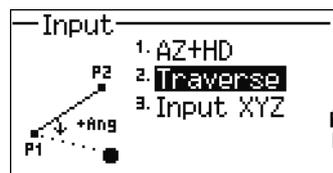

To continuously calculate a new point, enter +Ang, HD, and dVD from the previous bearing line. This is a convenient way to enter Traverse points.

Entering coordinates

To manually enter the XYZ coordinates, press ③ or select `Input XYZ` in the Input menu.

The PT name defaults to the last recorded PT + 1.

Enter the coordinates using the numeric keys. To move to the next field, press ⎡ENT⎤ or ⎡v⎤ in a field
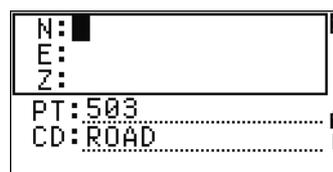

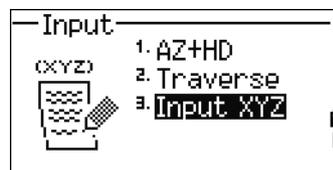

To store the point as an MP record and return to the point input screen, press ENT in the Z field. The default PT is incremented to the next value.

```
N:        200.308
E:        -64.231
     - REC XYZ -

CD:ROAD
```
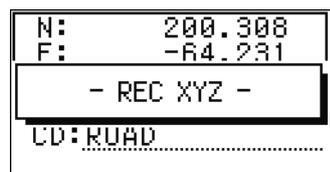

You can record NE, NEZ, or Z-only data to the database.

Calculating area and perimeter

To calculate an area or perimeter, press ③ or select Area & Perim in the Cogo menu.

To take a measurement, enter the first point and press ENT, or press the MSR softkey.

```
┌─Cogo─────────────
│  ┌ ┐      ¹·Inverse

```
Calculating coordinates using intersection functions

To enter the Intersection menu, press ③ or select Intersection in the Cogo menu.
There are four functions in this menu for calculating coordinates.

Calculating a bearing-bearing intersection

A bearing-bearing intersection is the intersection point of two lines.

1. To calculate a bearing-bearing intersection,
    press ① or select Brng-Brng in the
    Intersection menu.

    ```
    ─Intersection───────
             ¹·Brng-Brng
    P2       ²·Brng-Dist
             ³·Dist-Dist
             ⁴·Pt-Line
    P1
    ```
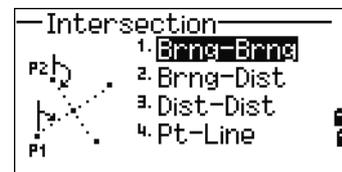

2. Enter the first point name and press ENT.
    Alternatively, to measure directly to the point,
    press the MSR softkey.

    ```
    Input P1              1
    P1:█
    AZ:
    (±Ang:  0.0000  0/S:  0.0000)
    MsrPT           List  Stack
    ```
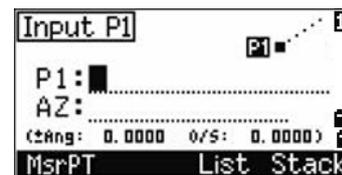

3. Define the first line by azimuth.

    ```
    Input AZ              1
      P1:P10
      AZ:█
    (±Ang:  0.0000  0/S:  0.0000 )
                    O/S       Pts
    ```
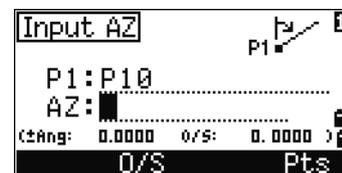

4. To define the line by two points, press the Pts
    softkey. The Fr field defaults to the P1 point, but
    you can change the selected point. In the To
    field, enter or measure to the second point.

    ```
    Calc AZ by Pts        1
      Fr:P10
      To:█
    MsrPT           List  Stack
    ```
    For more information about the O/S softkey, see
.

5. Do one of the following:

    –   To return to the previous screen, press ESC.
        The calculated value appears in the AZ field.

    –   To go to the next screen, press ENT.

6.   Define the second line by two points or by P2 and AZ.

```
┌Input AZ┐              🖫  🔋
                          P2
  P2:K52
  AZ:105.2648█
(±Ang:  0.0000  O/S:  0.0000)🔋
         O/S              Pts
```

7.   To calculate the coordinates of the intersection point, press [ENT] in the AZ field.

     The calculated coordinates are displayed. You can input a Z coordinate if necessary.

```
  X:        200.308   🔋
  Y:        -64.231
  Z:█
PT:503              🔋
CD:CURB            🔋
```
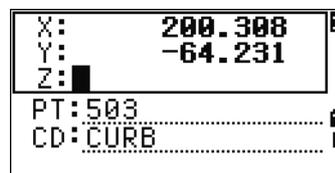

8.   Enter a value in the PT field and in the CD field.

9.   To record the point, press [ENT].

Sample records

Calculating a bearing-distance intersection

1.   Press [2] or select Brng-Dist in the Intersection menu.

     Brng-Dist calculates the intersection point formed by one line and one distance (radius).

```
┌Intersection────┐
      (P2) ¹·Brng-Brng
           ²·Brng-Dist
           ³·Dist-Dist      🔋
      P3   ⁴·Pt-Line
 P1
```

2.   Enter a point on the line.

     The line can be defined by two points or by a point and an azimuth.

```
┌Input P1┐              🔋
                    P1■
  P1:4672█
  AZ:
(±Ang:  0.0000  O/S:  0.0000)🔋
MsrPT           List  Stack
```

3.   Enter the second point (P2) as the center of the circle.

```
┌Input P2┐              🔋
                      ·P2
  P2:█
  HD:              m  🔋
MsrPT           List  Stack
```
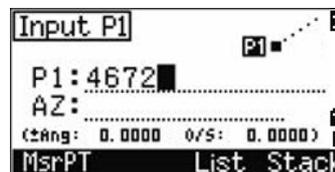

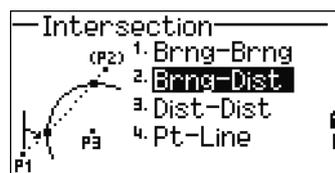

4. Enter the distance from P2.

    –   To define the distance (HD) by two points, press the Pts softkey.

    –   To calculate the coordinates of the intersection point, press ENT in the HD field.

5. If there are two results, the first solution appears graphically relative to the P1-P2 line. To display the second solution, press ◁ or ▷.

6. To record the point, press ENT when the required solution appears.

7. Enter a Z coordinate if necessary.

8. To move to the PT and CD fields, press ENT.
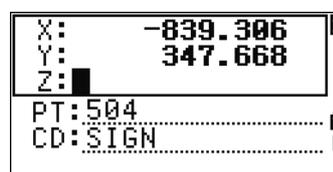

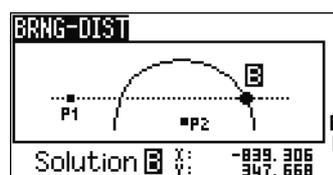

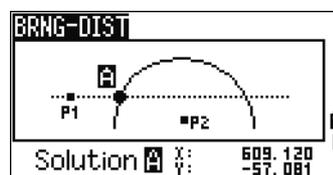

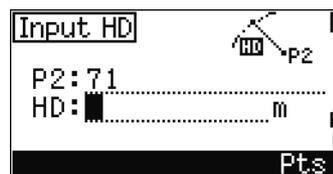

Sample records

CO, P2:506
CC,A-123,,4567.3080,200.1467,-1.2056,POT

Advanced feature: Entering angle and distance offsets

To display the offset input screen, press the O/S softkey.
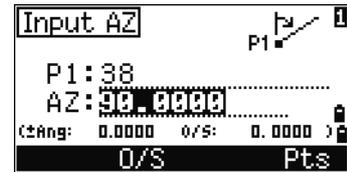

In the Ang field, enter a positive value to rotate the line clockwise. Enter a negative value to rotate the line counterclockwise.
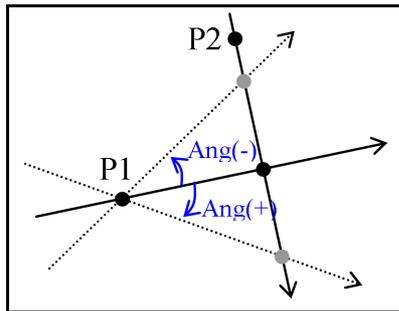

In the O/S field, enter a positive value to specify an offset to the right. Enter a negative value to specify an offset to the left.
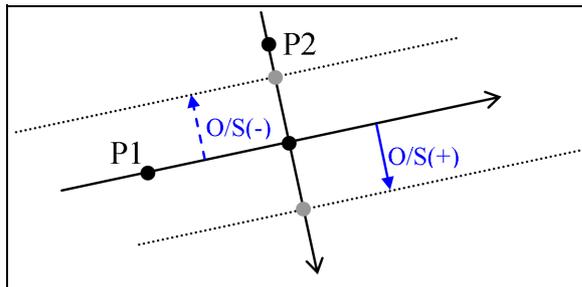

Settings

To display the Settings menu, press ② or select Settings on the MENU screen.

Use this menu to configure the initial job settings.

```
┌─────Settings─────┐
│¹·Angle     ⁶·Stakeout│
│²·Distance  ⁷·Unit │
│³·Coord.    ⁸·Rec  │
│⁴·PwrSave   ⁹·Others│
│⁵·Comm.            │
└───────────────────┘
```
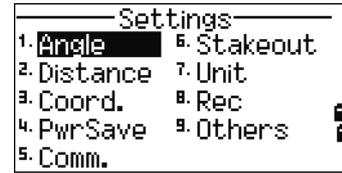

Some job settings, specified in the following sections, cannot be changed once a job is created. If any of these settings are changed while a job is open, a confirmation screen appears, asking you to create a new job with the new settings, or to work with those settings without recording any data. For more information, see Settings, page 174.

```
┌───────────────────┐
│❗ Job Settings     │
│   will be changed │
│                   │
│* Close the current Job?│
│[Abrt]··········[OK]│
└───────────────────┘
```
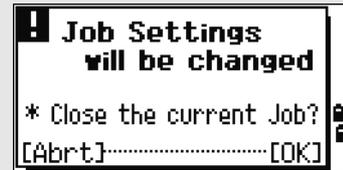

Angle

To open the Angle menu, press ① or select Angle in the Settings menu.

VA zero   Zenith/Horizon/Compass

```
┌─<Angle>──────────┐
│   VA zero: Zenith │
│ Resolution: 5"   │
│         HA: Azimuth│
│                   │
└───────────────────┘
```
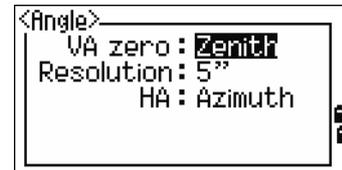

The VA zero job setting cannot be changed once a job is created.

Resolution   1"/5"/10" or 0.2 mgon/1 mgon/2 mgon
HA   0 to BS/Azimuth

The HA job setting cannot be changed once a job is created.

When this field is set to Azimuth, the horizontal angle (HA) that appears and recorded is in Azimuth value. When this field is set to 0 to BS, HA is in HA zero to BS value.

Distance

To open the Distance menu, press ② or select Distance in the Settings menu

Scale	Numeric value between 0.999600 and 1.000400
T-P corr.	ON/OFF
Sea Level	ON/OFF
C&R corr.	OFF/0.132/0.200

```
<Distance>─────────────1
  Scale : 1.000000
 T-P corr. : ON
 Sea Level : OFF
 C&R corr. : 0.132
```
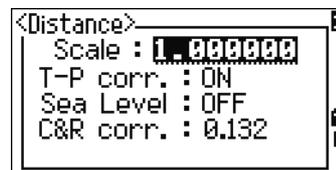

The Scale, T-P corr., Sea Level, and C&R corr. job settings cannot be changed once a job is created.

Temperature and Pressure corrections

$$K = 275 - \frac{106 \times P \times \left(\dfrac{10000.0}{13.5951 \times 980.665} \right)}{273 + T}$$

$$SD' = \left(1 + \frac{K}{1000000} \right) \times SD$$

SD	Slope dist. (before adj.)
SD'	Slope dist. (after adj.)
K	Compensation coefficient
P	Pressure (hPa)
T	Temperature (°C)

Sea Level correction

$$HD' = \frac{HD \times R_e}{R_e + Z_{STN}}$$

HD	Horizontal dist. (before adj.)
HD'	Horizontal dist. (after adj.)
Z_{STN}	Instrument-Z
R_e	6370 km

Curvature and Refraction correction

Because the surface of the earth is curved, the vertical difference (VD and Z) at the measurement point, as referenced to the horizontal plane, inevitably includes some error. This error is called *curvature error*. Also, because the density of the air

surrounding the earth decreases with altitude, light is refracted at different rates at different altitudes. The error caused by this change in refraction is called *refraction error*.
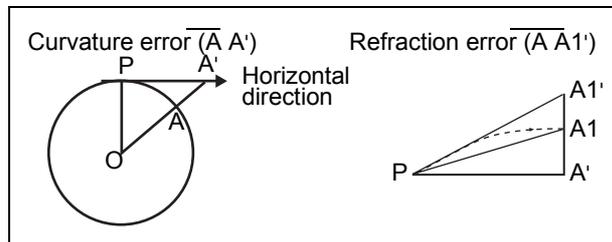

HD	Horizontal dist. (before adj.)
HD'	Horizontal dist. (after adj.)
VD	Vertical dist. (before adj.)
VD'	Vertical dist. (after adj.)
SD	Slope distance
VA	Vertical angle
Re	6370 km
k	C&R constant (0.132 or 0.200)

$$HD' = HD - \frac{SD^2 \sin(2VA)}{2R_e}\left(1 - \frac{k}{2}\right)$$

$$VD' = VD + \frac{HD^2}{2R_e}(1 - k)$$

Coordinate

To open the Coordinate menu, press ③ or select `Coord.` in the Settings menu.

Order	NEZ/ENZ
Label	XYZ/YXZ/NEZ(ENZ)
AZ	North/South
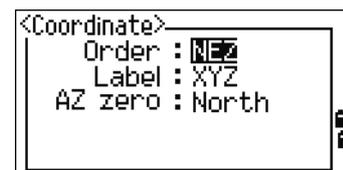

The Order and AZ job settings cannot be changed once a job is created.

Power saving

To open the Power Save menu, press ④ or select `PwrSave` in the Settings menu.

Main Unit	OFF/5min/10min/30min
EDM Unit	OFF/At once/0.1min/0.5min/3min/10min
Sleep	OFF/1min/3min/5min
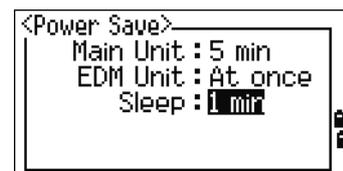

Communications

To open the Communication menu, press ⑤ or select `Comm.` in the Settings menu.

Ext.Comm	NIKON/SET
Port	Serial/Bluetooth (*)
Baud	1200/2400/4800/9600/19200/38400 bps
Length	7/8
Parity	EVEN/ODD/NONE
Stop bit	1/2

(*) Port selection field appears only when the optional Bluetooth is on-board.

Stakeout

Press ⑥ or select `Stakeout` in the Settings menu to open the Stakeout menu.

Add PT   Integer between 1 and 999,999

.
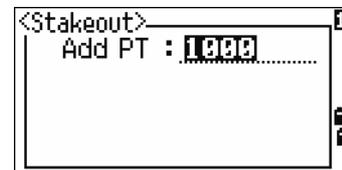

This field sets the default point number to record observed data in stakeout.

Unit

To open the Unit menu, press ⑦ or select `Unit` in the Settings menu.

Angle	DEG (Degree)
	GON (GON)
	MIL (Mil6400)
Distance	Meter/US-Ft/I-F

If you select US-Ft or I-Ft, an additional settings screen appears. Use this screen to specify whether to display values in Decimal-Ft or Ft-Inch.

Temp	°C (Celsius)
	°F (Fahrenheit)
Press	hPa/mmHg/inHg

The Angle, Distance, Temp, and Press job settings cannot be changed once a job is created.

Recording

To open the Rec menu, press ⑧ or select `Angle` in the
Settings menu.

```
<Rec>
 Store DB : RAW+XYZ
 Data Rec : Internal
```

Store DB RAW/XYZ/RAW+XYZ

This setting determines whether raw and/or
coordinate data is stored when you record SS,
CP, or SO records in the Basic Measurement
Screen (BMS) or Stakeout screen.

Data Rec Internal/COM

Set this field to COM to output data on the COM
port when you press [ENT] in the BMS or a
Stakeout screen. The data is not stored to the
job file. For more information, see Outputting
data to the COM port, page 82

Others settings

To open the Others menu, press ⑨ or select `Others` in
the Settings menu.

```
<Others>
 XYZ disp : Fast
 2nd Unit : US-Ft
  Split ST : Yes
 CD Input : <123>
Language : English
```

XYZ disp Fast/Norm/Slow/+ENT

Defines speed to move to the next screen after
showing XYZ of the input PT

2nd Unit None/Meter/US-Ft/I-Ft

When the Secondary unit is set to a unit, an
extra display screen is available in the BMS,
stakeout observation screens, and 2-pt
reference line screens. The extra screen shows
the HD, VD, and SD in the secondary unit.

If you select US-Ft or I-Ft, an additional settings screen appears. Use this
screen to specify whether to display values in Decimal-Ft or Ft-Inch.

```
<Others>
 XYZ disp : Normal
   Decimal-Ft
   Ft-Inch
 CD Input : <123>
```
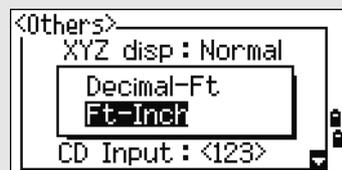

Split ST No/Yes

Select Yes to separate the point numbers of
station points from other record type point
numbers

If you set the Split ST field to Yes, an additional setting screen appears. Use
this screen to specify the starting ST number.

```
<Others>          1
 XYZ disp : Normal
   Start PT:
    9000
 CD Input : <123>
```
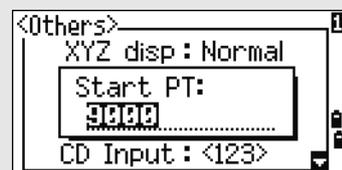

CD Input	ABC/123
	Sets the default input mode when a CD field appears.
Language	Select a language from the list.
	Press ⎣<⎦ / ⎣>⎦ to open the select language screen.

Press ⎣^⎦ / ⎣v⎦ to move the cursor to the desired language, and press ⎣ENT⎦ to select it.

Reboot confirmation screen appears.

Press ⎣ENT⎦ and re-start the instrument, and the selected language will be available.

Owner's Detail	Up to 20 characters.
	Enter your name or the name of your company. If you enter a value in this field, it appears at start-up.
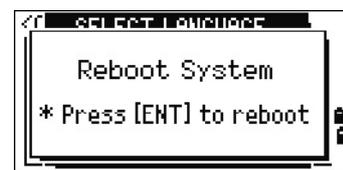

☼ **Tip –** To provide easier configuration for common regional settings, you can quickly configure the Nikon total station to a pre-set combination of default regional settings. For more information, see Changing Regional Configuration Pre-sets, page 25.

☼ **Tip –** The Nikon total station supports up to 3 languages on the instrument. For more information on changing the language settings, see page 113.

Data

Use the Data menu to view or edit records. To display the Data menu, press ④ on the MENU screen.

Viewing records

You can view data at any time, even in an observation screen or while entering points.

Viewing raw data

To show the raw data records in a list, press ① on the Data menu screen.

When you first view the raw data, the last four raw records in the current job are displayed. Use Ⓐ or Ⓥ to scroll through the records.

To see detailed information for the selected records, press ⓔⓝⓣ.

To return to the record list, press ⓔⓢⓒ.
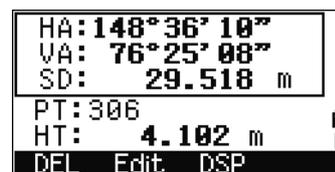

SS, CP, F1 records

Raw SS, CP and F1 records contain PT, HT, CD, HA, VA, and SD fields.

SS records are sideshots (topo shots). All shots from the Basic Measurement Screen (BMS) are stored as SS records.

CP records are shots taken in the Angle or Repeat menus, or in the BMS. For more information, see Recording a foresight point after repeat angle measurement, page 52, and Recording data from any observation screen, page 81.

When the Store DB setting is set to RAW+XYZ, press ⓓⓢⓟ to switch between the first screen (showing HA, VA, SD, PT, and HT) and the second screen (showing X, Y, Z, PT, and CD).

Coordinates are not available in F1 records.

When you take more than one measurement to the same point and choose to overwrite the XYZ data, the old raw record becomes raw data only. As a result, only one SS(RAW) record keeps its corresponding SS(XYZ) record. Other SS(RAW) records to the same point no longer have coordinates available.

ST records

ST (station) records contain ST, HI, BS, and AZ fields.

Press `DSP` to switch between the first screen (showing ST, HI, BS, and AZ) and the second screen (showing X, Y, Z, PT, and CD).

When you assign a new ST point name in `MENU > Stn Setup > Quick,` the coordinates of the station is recorded as (0, 0, 0).

SO records

SO records are stakeout shots. These are shots recorded in stakeout functions.

When the Store DB setting is set to RAW+XYZ, press `DSP` to switch between the first screen (showing HA, VA, SD, PT, and HT), the second screen (showing X, Y, Z, PT, and CD), and the third screen (showing dX, dY, dZ, PT, and CD).

The dX, dY, and dZ fields store the difference between the stakeout shot's actual position and its planned position. These fields are downloaded as comment records in Nikon RAW format.

CO records

A CO record is a comment added to the job from the system.

For example, when you change the Stn-Z using the Remote Benchmark function, or you reset the horizontal angle using the BSCheck function, the system writes a comment record.
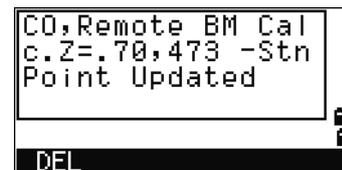

```
CO,Remote BM Cal
c.Z=.70,473 -Stn
Point Updated

 DEL
```

When you input a Stn-XYZ by Base-XYZ function, the recorded station appears as a comment record.

```
CO,Base XYZ
 HI=   1.700 m
 X=   12345.000
 Y=      50.123
 Z=     164.208
 DEL
```

SY records

When you complete a station setup, a SY record is stored. This record contains the Temperature, Pressure, and Prism Constant values.

```
CO,
 Temp:    58°F
Press: 29.9inHg
Prism:    0mm

 DEL
```

RM records

When you record measurements in RDM (Cont) or
RDM (Rad), they are labeled as RM records.

Each RM record consists of two screens.

```
RDM,                    1/2
 From)K-3
   To)605
  rHD:      76.940  m
  rVD:       2.581  m
 DEL              DSP
```

Press [DSP] to switch between the first screen (showing
From, To, rHD, and rVD) and the second screen
(showing rAZ, rSD, rV%, and rGD).

When you download data in Nikon RAW format, RM
records are output as comment (CO) records.

```
RDM,                    2/2
  rAZ:165°35'45"
  rSD:      13.940  m
  rV%:      19.320  %
  rGD:      -5.305:1
 DEL              DSP
```
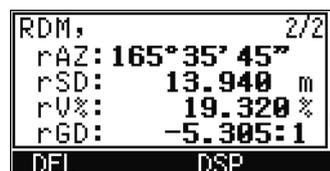

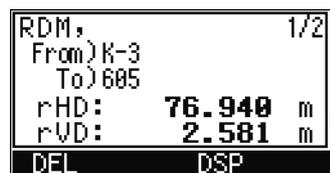

AR records

An AR record stores an area and perimeter calculation.

When you download data in Nikon RAW format, AR
records are output as comment (CO) records.

```
Name: SITE35-A

 Area :      158.660 m²
 Perim :     339.209 m

 DEL
```

View coordinate data

When you press [2] or select XYZ data in the Data
menu, coordinate data appears in a list, with the newest
record at the bottom of the screen. Use [^] or [v] to scroll
through the records. Use [<] or [>] to move up or down
one page.

```

The header (XYZ,YXZ,NEZ, or ENZ) depends on the Coord. Label setting in MENU > Settings >
Coord. For more information, see .

UP, MP, CC, and RE records

All coordinate records contain PT, CD, X, Y, and Z fields.

UP records are uploaded point coordinates. MP records are manually input point
coordinates. CC records are points calculated in Cogo, and RE records are points
calculated in Resection.

When the Store data setting is set to RAW+XYZ or to XYZ, shots in the BMS (SS records), in various O/S functions (SS records), in 2Pt-RefLine and Arc-RefLine in PRG (SS records) and in some Stakeout functions (SO records) store coordinate records as well. The format of the data is the same as other coordinate records.

View records by station

To view records by station, press ③ or select ST->SS/SO/CP in the Data menu.

A list of all stations appears.

Use ⊼ or ⊻ to highlight the station name that you want to view. Use ◁ or ▷ to move up or down one page.

To view detailed information about the selected station, press [ENT].

To display all the observation data from the selected station in chronological order, press [ENT] again.
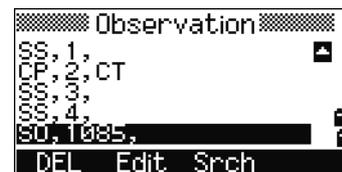

Detailed data is as for raw data. For detailed information about each point type and format, see Viewing raw data, page 114.

Deleting records

Deleting raw records

In the RAW screen, use ⊼ or ⊻ to highlight the record that you want to delete. Then press the DEL softkey.

A confirmation screen appears. To delete the selected record, press [ENT] or the Yes softkey.

If the Store DB setting is set to Both, the system also deletes the corresponding coordinate data when you delete an SS, SO, or CP record.

You can also delete raw data by pressing the DEL softkey in the detailed display screen for the record.
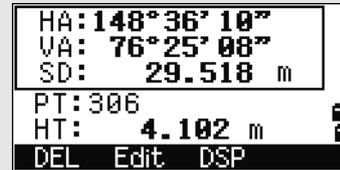

```

Editing records

For any point record, you can edit the point name (PT), feature code (CD), height of target (HT), height of instrument (HI), backsight point (BS), and backsight azimuth (AZ).

You cannot edit the CD field for SO or F1 records.
You cannot edit the HA, VA, or SD values.

Editing raw records

1. Do one of the following:

   – In the RAW screen, highlight the record that you want to edit. Then press the Edit softkey.

```
┌░░░░░░░░RAW░░░░░░░┐

     * overwrite?
```
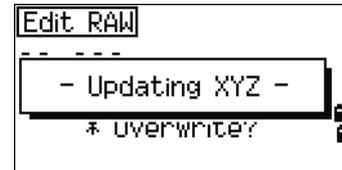

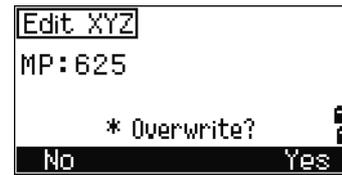

Editing station records

Note – The system will not recalculate measurements if you change the station record. All coordinate and raw data observed from an edited station record must be recalculated in your postprocessing software.

In the RAW screen, use ^ or v to highlight the station record that you want to edit. Then press the Edit softkey.

```
▓▓▓▓▓▓▓ RAW ▓▓▓▓▓▓▓
CO,Temp:20 Press:101:
ST,3501
F1,,
SS,2,CT/BS
SS,3,KERB
 DEL   Edit   Srch
```

You can edit any field in the ST record, but the instrument does not recalculate any measurements from this station.

Press ENT in the AZ field to confirm the change.

```
┌───────────────────┐
│ST:3501            │
│HI:     1.843  m   │
│BS:3500            │
│AZ:   0°00'00"     │
│* Modify each item & [ENT]│
│             List Stack│
```

If you change the ST or HI values, the coordinates of observation points are not recalculated. A comment record is stored to record the change. The following example shows a comment record for a changed HI value:

CO,HI changed at ST:9012 Old HI= 1.345m

If you change the BS or AZ values, raw records are not recalculated. A comment record is stored to record the change.

Searching records

You can search for records by their type, point name, code, or by any combination of these values.

Searching raw records

In the RAW screen, press the Srch softkey to access the raw data search function.

To find a point by name, enter the name in the PT field and press [ENT] twice.

You can use the asterisk (*) as a wildcard. For example, when you enter 30* in the PT field, the search matches the points named 300, 301, 302, 3000A2, and 3010.

To search by point type, move to the Type field and use [<] or [>] to change the selected point type. The options are ALL, ST, SS, SO, CP, CO, CO(SY), and CO(RDM).
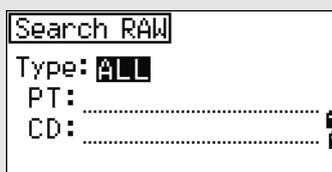

If you selected ST, SO or F1 in the Type field, you do not have to enter a value in the CD field. Press [ENT] in the PT field to start the search.
If you selected CO, CO(SY), or CO(RDM) in the Type field, you cannot enter a value in the PT or CD fields. Press [ENT] in the Type field to start the search.

If more than one point matches the search criteria, the matching points are displayed in a list.

Use [^] or [v] to highlight the point you want to use. Then press [ENT] to select it.

Detailed data for the selected record appears. Press the DSP softkey to change the fields shown.
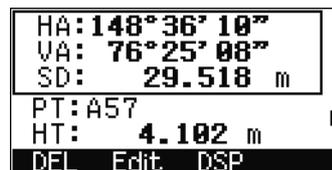

Press [ESC] to return to the list.

If no point matches the specified criteria, an error screen appears. Press any key to return to the data screen.

```

Z:        30.580
PT:2006
CD:
```
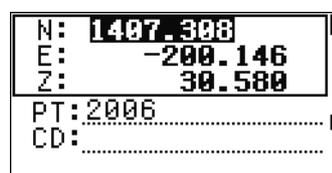

You can record NE, NEZ, or Z-only data to the database.

Point name list and code list

The instrument stores two list files: a list of PT names and a list of CD names. The structure and functionality of these files is the same.

- The *PT name list* is useful if you have to handle more than one patterns of point names in the field. For example, you may need to use points named 1, 2, 3 …, as well as points named A1, A2, A3 ….

- The *code list* is a prepared list of feature codes. You can use it to store your own codes.

Press ④ or select PT name List in the Data menu to open the point name list.

Press ⑤ or select Code list to open the code list.

```

<Communication>
      Baud : 38400
    Length : 8
    Parity : None
  Stop bit : 1
```

Use an RS-232C cable to connect the instrument to the computer.

The Free space field shows the number of points that can be stored.

```
┌Connect Cable┐
│Job name:NIKON50 │
│  Records :   532  ▯
│Free space :  4609 ▯
│Abrt            Go │
```

Press ⌷ENT⌷ to put the instrument in receive mode. Then use the Send Text File command in the terminal program on the computer to start sending data.
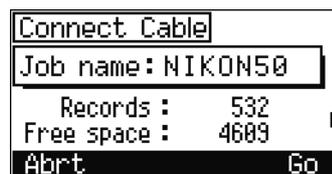

In the terminal program, set flow control to Xon/Xoff.

As each point is received by the instrument, the value in the Records field is incremented.

```
┌Connect Cable┐
│Job name:NIKON50 │
│                   │
│  Records:   581   ▯
│                   │
│ * Press [ESC] to abort│
```
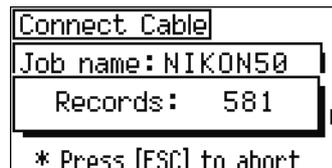

If you press ⌷ESC⌷ during data upload, the upload is canceled and the display returns to the Communication menu. Records that were received before you pressed ⌷ESC⌷ are stored in the job.

The system truncates any code that is longer than 16 characters.

Duplicate points

If the existing point is a UP, CC, or MP record, and it is not referred to by any ST or BS, it is automatically overwritten by the uploaded point. No error message appears.

Advanced feature: Editing the data order for upload

1. To open the Data Fields screen, press the Edit softkey.

```
┌Connect Cable┐
│Job name:SITE-321 │
│ (Send Records:  1257) ▯
│ * Turn on the Xon/Xoff ▯
│Abrt            Go │
```

2. To move between the fields, press ⌷<⌷ or ⌷>⌷.

3. To change the selected item in a field, use the ▯ and ▯ softkeys. The options are PT, N, E, Z, CD, or blank.

```
┌Data Fields┐
│PT│ N │ E │ Z │CD│  │  │
│ * [←]/[→] to move cursor ▯
│ [⊕]/[⊖] to change items ▯
│         ▯    ▯    Save │
```

4. To save your changes and return to the previous screen, press the Save softkey.
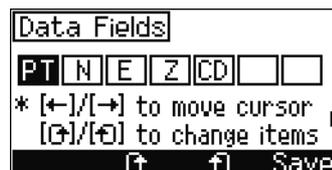

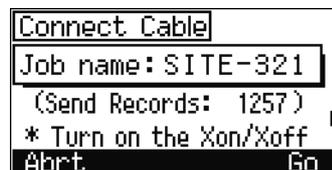

For example, if your original data is as follows:

 1, UB, 30.000, 20.000, L1

and you set the data fields to PT N E CD, then the uploaded data is:

 PT=1, N=30.000, E=20.000, CD=L1

Uploading coordinates without points

You can upload data without points. If you do not include a point in the format definition, each line of data is automatically assigned the next available point number. To help you to select points in the field, make sure that you store an identifier in the CD field.

The data format cannot include duplicate items. Use PT, N, E, Z and CD once each in the data format.
To skip some items in your original file, set the corresponding field to blank.

Uploading a point name list or code list

When you upload a code list, it always replaces the existing code list on the instrument.

To upload a point name list via cable, press ③ or select PT List in the Communication menu.

To upload a code list, press ④ or select Code List.
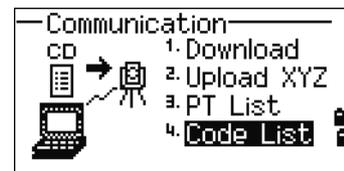

Connect the RS-232C cable.

Start a terminal program on the computer.

To put the instrument into receive mode, press [ENT] or the OK softkey.

The counter is updated as each line in the list is stored.

You can store up to 254 codes or point names.
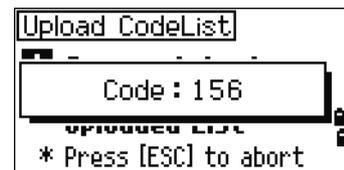

If a code or point name is longer than 16 characters, it is truncated.

1sec-Keys

Use the 1sec-Keys menu to configure the settings for the one-second keys, [MSR], [DSP], [USR], [S-O], and [DAT]. To access this menu, press ⑥ or select 1sec-Keys in the MENU screen.

MSR key settings

To change settings for the MSR1 and MSR2 keys, press
1 or select [MSR] in the 1sec-Keys menu.

```
━━━━1sec-Keys━━━━
1.[MSR]
2.[DSP]  >> Precision &
3.[USR]     Average for
4.[S-O]     MSR1/MSR2
5.[DAT]
```
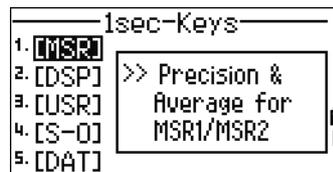

There are two MSR keys:

- To change the settings for the MSR1 key, press 1 or select MSR1.

- To change the settings for the MSR2 key, press 2 or select MSR2.

```
Measure mode
1.MSR1
2.MSR2
```
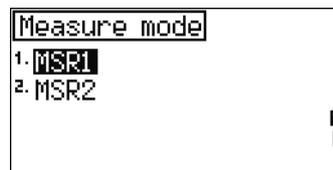

Each MSR key has five settings.

In the Const and AVE fields, use the numeric keys to enter values. In the other fields, use < or > to change the settings.

```
<MSR1>━━━━━━━━━1
   Target : Prism
   Const :  0   mm
    Mode : Normal
     AVE : 3
Rec mode : ALL
```
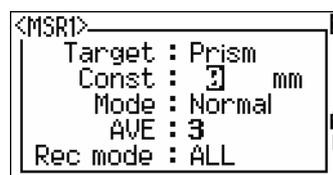

💡 **Tip –** You can also access the settings screen by holding down MSR1 or MSR2 for one second.

DSP key settings

To change the display items in the BMS and in Stakeout observation screens, press 2 or select [DSP] in the 1sec-Keys menu.

```
━━━━1sec-Keys━━━━
1.[MSR]
2.[DSP]  >> Change
3.[USR]     DSP formats
4.[S-O]     in BMS/S-O
5.[DAT]
```
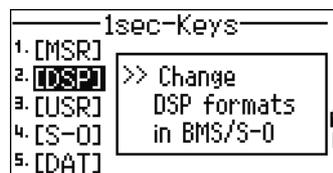

To move the cursor, use <, >, ^, or v. To change the display item, press either the ⊕ softkey or the ⊝ softkey.

To save the changes, press ENT at the last line of <DSP3> or press the Save softkey.

```
<DSP1>━━<DSP2>━━<DSP3>
  HA     HA     AZ
  VA     VD     V%
  SD     HD     HD
* Change item by ⊕ / ⊝
         ⊕     ⊝   Save
```
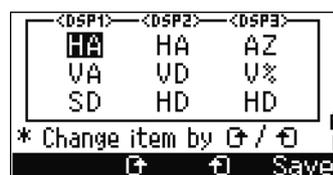

💡 **Tip –** You can also access the DSP settings screen by holding down DSP for one second.

USR key settings

To change the functions that are assigned to the USR1 and USR2 keys, press 3 or select [USR] in the 1sec-Keys menu.

```
━━━━1sec-Keys━━━━
1.[MSR]
2.[DSP]  >> Assign a
3.[USR]     Function to
4.[S-O]     each USR key
5.[DAT]
```

There are two ⌜USR⌝ keys. The function that is assigned
to each key appears beside the key name.

```
USR Key
1. USR1 <Area & Perim>
2. USR2 <Target>
```

- To change the settings for the ⌜USR1⌝ key,
press ⌜1⌝ or select USR1.

- To change the settings for the ⌜USR2⌝ key,
press ⌜2⌝ or select USR2.

In the Select Functions screen, the asterisk (*)
indicates the function that is currently assigned to the
key.

To highlight a function, use ⌜∧⌝ or ⌜∨⌝. To assign that
function to the selected ⌜USR⌝ key, press ⌜ENT⌝.

```
USR1 Select Functions
* Cogo →
  O/S →
  PRG →
  Temp-Press
  Note
```
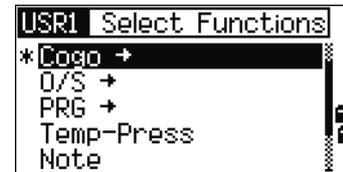

⌜S-O⌝ **key settings**

To enter the Stakeout settings screen, press ⌜4⌝ or select
[S-O] in the 1sec-Keys menu.

```
────1sec-Keys────
1. [MSR]
2. [DSP]  >> Add const &
3. [USR]     Distance Guide
4. [S-O]     by LG
5. [DAT]
```

There are two Stakeout settings. For more information,
see Stakeout, page 111.

```
<Stakeout>──────── 1
  Add PT : 1000..........
```

⌜DAT⌝ **key settings**

1. To change the settings for the ⌜DAT⌝ key, press ⌜5⌝
or select [DAT] in the 1sec-Keys menu.

```
────1sec-Keys────
1. [MSR]
2. [DSP]  >> Set Data type
3. [USR]     to view it by
4. [S-O]     one-touch key
5. [DAT]
```

The asterisk (*) indicates the currently selected
view format.

2. To move the cursor, use ⌜∧⌝ or ⌜∨⌝.

3. To change the format displayed by ⌜DAT⌝, press
⌜ENT⌝.

```
DAT Select Format
* 1. DAT [MENU]
   2. RAW data
   3. XYZ data
   4. Station→SS/SO/CP
```
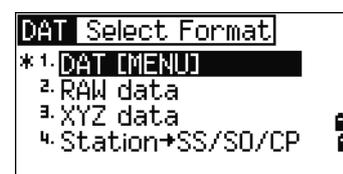

Calibration

Use the Calibration screen to calibrate the instrument. To open the Calibration screen, press ⑦ or select `Calibrat.` on the MENU screen.

For more information, see Adjusting, page 138.

```
┌─────────MENU─────────┐
│¹·Job       ⁶·1sec-Keys│
│²·Cogo      ⁷·Calibrat.│
│³·Settings  ⁸·Time     │
│⁴·Data               ▯ │
│⁵·Comm.              ▮ │
└──────────────────────┘
```

Time

Use the Date & Time screen to set the current date and time.

1. To open the Date & Time screen, press ⑧ or select `Time` on the MENU screen.

```
┌─────────MENU─────────┐
│¹·Job       ⁶·1sec-Keys│
│²·Cogo      ⁷·Calibrat.│
│³·Settings  ⁸·Time     │
│⁴·Data               ▯ │
│⁵·Comm.              ▮ │
└──────────────────────┘
```

The current date and time settings are displayed.

2. Enter the date in Year-Month-Day format. For example, to change the date to June 18, 2008, press
    ② ⓪ ⓪ ⑧ ENT ⑥ ENT ① ⑧ ENT.

```
┌─<Date>──────────────┐▯
│Date : 2008-06-24    │
│ Time : 08:15        │
│                    ▮│
│* Year-Month-Day order│
└──────────────────────┘
```
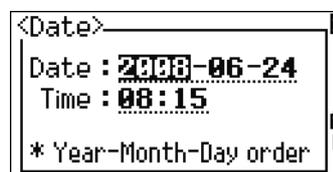

If the highlighted part of the field (for example, the year) is already correct, you can just press ENT to use the current value. For example, if the date is already set to June 24, 2008, and you want to change the date to June 18, 2008, press ENT ENT ① ⑧ ENT.

3. To move to the Time field, press ENT in the Date field.

4. Enter the time in 24-hour format. For example, to set the time to 4:35 PM, press
    ① ⑥ ENT ③ ⑤ ENT.

```
┌─<Date>──────────────┐▯
│Date : 2008-06-24    │
│ Time : 08:15        │
│                    ▮│
│* In 24-hours system  │
└──────────────────────┘
```
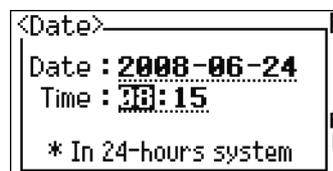

5. Do one of the following:

    –   To finish setting the date and time, press ENT in the Minutes field.

    –   To cancel the input, press ESC.

6

Checking and Adjustment

In this chapter:

- ■ Adjusting the Electronic Level
- ■ Checking and Adjusting the Circular Level
- ■ Checking and Adjusting the Optical/Laser Plummet
- ■ Zero Point Errors of Vertical Scale and Horizontal Angle Corrections
- ■ Checking the Instrument Constant
- ■ Checking the Laser Pointer

Adjusting the Electronic Level

Adjustment of the electronic level is done by Zero point errors of vertical scale and horizontal angle corrections. For detailed instruction, please see page 137.

Checking and Adjusting the Circular Level

Once you have checked and adjusted the electronic level, check the circular level.

If the bubble is not in the center of the level, use the adjusting pin to rotate the three adjustment screws of either circular level on the instrument main body or tribrach until the bubble is centered.

Checking and Adjusting the Optical/Laser Plummet

The optical axis of the plummet must be aligned with the vertical axis of the instrument.

To check and adjust the optical/laser plummet:

1. Place the instrument on the tripod. You do not have to level the instrument.

2. Place a thick sheet of paper marked with an X on the ground below the instrument.

   While you are looking through the optical plummet, adjust the leveling screws until the image of the X is in the center of the reticle mark ◎.

   For laser plummet, adjust the laser pointer to the X.

3. Rotate the alidade 180°.

   If the marked image is in the same position in the center of the reticle mark, no adjustment is required

   For laser plummet, if the laser pointer is on the X, no adjustment is required.
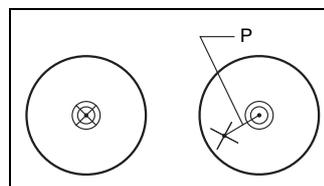

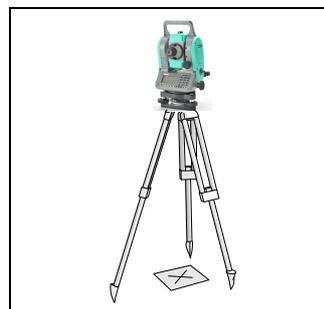

4. If the image or laser pointer is not in the same position, adjust the optical or laser plummet:

    a. Use the supplied hexagonal wrench to turn the adjustment screws until the image of the X is in Position P. Position P is the center point of the line connecting the X and the center of the reticle mark ⊚.

    b. Repeat from Step 2.
        For laser plummet adjustment, a cap needs to be removed.
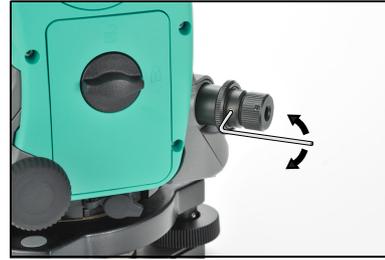

Zero Point Errors of Vertical Scale and Horizontal Angle Corrections

Checking

1. Set up the instrument on the tripod.

2. Follow the leveling procedures described in Leveling, page 15.

3. Flip the telescope to the Face-1 position.

4. Sight a target that is within 45° of the horizontal plane.

5. Read the vertical angle from the VA1 field in the Basic Measurement Screen (BMS).

6. Rotate the instrument 180° and flip the telescope to the Face-2 position.

7. Read the vertical angle from the VA2 field.

8. Add the two vertical angles together, VA1 + VA2.

    –   No adjustment is required if the zero reference for vertical angles (VA zero setting) is set to Zenith, and VA1 + VA2 equals 360°.

    –   No adjustment is required if the zero reference for vertical angles (VA zero setting) is set to Horizon, and VA1 + VA2 is either 180° or 540°.

    –   An adjustment is required if VA1 + VA2 is not one of the values listed above.

*Note – The difference between the vertical angle reading the relevant angle (either 360° for Zenith, or 180° or 540° for Horizon) is called the **altitude constant**.*

Adjusting

To enter the calibration screen, press ⟨MENU⟩ and ⟨7⟩.

```
┌──────────MENU──────────┐
│ ¹·Job        ⁶·1sec-Keys │
│ ²·Cogo       ⁷·Calibrat. │
│ ³·Settings   ⁸·Time      │
│ ⁴·Data                   │
│ ⁵·Comm.                  │
└────────────────────────┘
```

1. The Nivo series has two-axis level compensation.Take an F1 measurement to a target on the horizon. Press ⟨ENT⟩.

    The vertical angle is shown in the V0 dir= Horiz setting.

```
┌────────────────────────┐
│ X1:  520″  Y1: -125″    │
│ VA1:   0°03′ 12″        │
│ HA1:120°50′ 47″         │
│ * Sight P1 (F1)         │
│ & Press [ENT]      ·····P1│
└────────────────────────┘
```
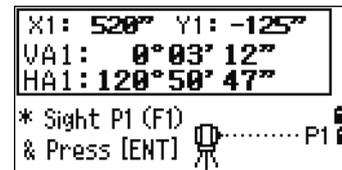

VA1	Face-1 vertical angle (tilt-off value)
HA1	Face-1 horizontal angle (tilt-off value)
X1	Face-1 X axis tilt value
Y1	Face-1 Y axis tilt value

When you have taken the measurement, the message on the bottom line changes from DO NOT TOUCH! to Turn to F2.

```
┌────────────────────────┐
│ X1:  520″  Y1: -125″    │
│ HA1:   0°03′ 12″        │
│ ┌──────────────────┐    │
│ │   Turn to F2     │    │
│ └──────────────────┘    │
│ & Press [ENT]      ·····P1│
└────────────────────────┘
```
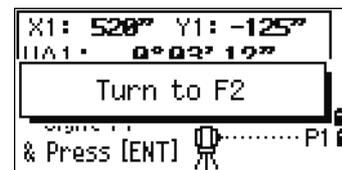

2. Take an F2 measurement to the same target. Press ⟨ENT⟩.

```
┌────────────────────────┐
│ X2:-120″  Y2:  213″     │
│ VA2:180°03′ 06″         │
│ HA2:300°50′ 39″         │
│ * Sight P1 (F2)         │
│ & Press [ENT]      ·····P1│
└────────────────────────┘
```

VA2	Face-2 vertical angle (tilt-off value)
HA2	Face-2 horizontal angle (tilt-off value)
X2	Face-2 X axis tilt value
Y2	Face-2 Y axis tilt value
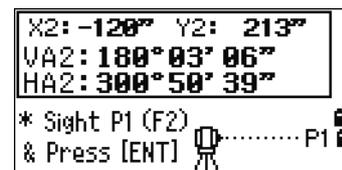

When the observation on F2 is completed, four parameters are displayed.

```
┌────────────────────────┐
│ X:   132″  Y:    44″    │
│ ACV:       12″          │
│ ACH:       -5″          │
│ * ACV = Altitude const adj.│
│ * ACH = Sighting axis error│
│ Redo                OK  │
└────────────────────────┘
```
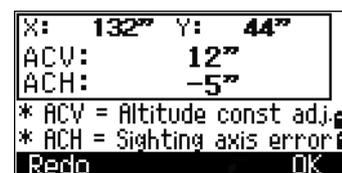

3. Do one of the following:

    – To return to the first observation screen, press ⟨ESC⟩ or the Redo softkey.

    – To set parameters on the instrument, press ⟨ENT⟩ or the OK softkey.

IIf ACV, ACH, X, or Y is out of range, OVER appears. Press any key to return to the first observation screen.

```
┌────────────────────────┐
│ X:   132″  Y:    44″    │
│ ACV:      OVER          │
│ ACH:       -5″          │
│ * ACV = Altitude const adj.│
│ * ACH = Sighting axis error│
│ Redo                    │
└────────────────────────┘
```
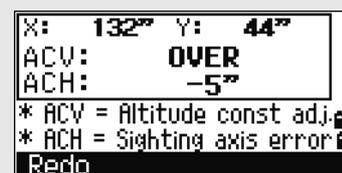

Checking the Instrument Constant

The instrument constant is a numerical value used to automatically correct for the displacement between the mechanical and electrical centers when measuring distances. The instrument constant is set by the manufacturer before the instrument is shipped. However, to ensure the highest operational accuracy, we recommend that you check the instrument constant several times a year.

To check the instrument constant, you can either compare a correctly measured base line with the distance measured by the EDM, or follow the procedure below.
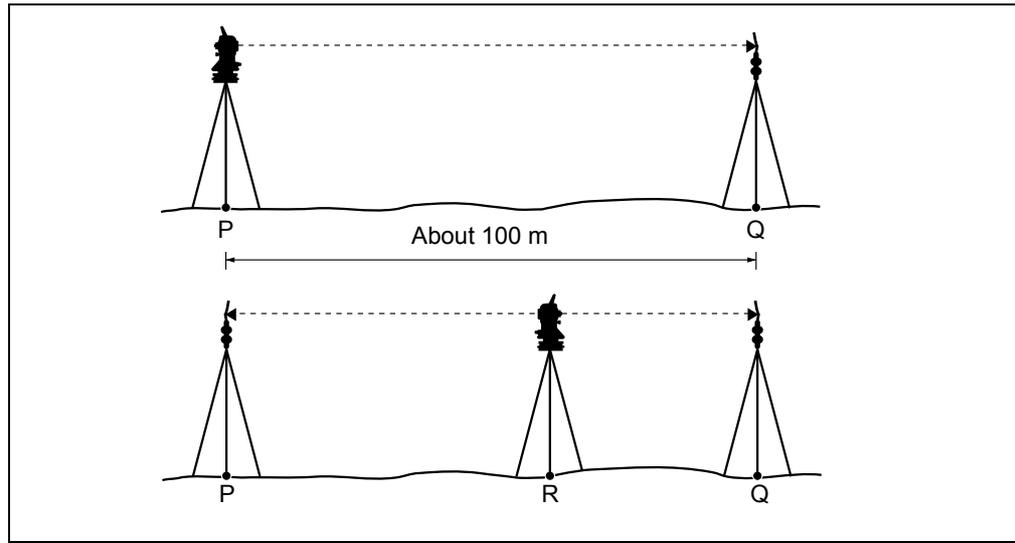

To check the instrument constant:

1. Set up the instrument at Point P, in as flat an area as possible.

2. Set up a reflector prism at Point Q, 100 m away from Point P. Make sure that you take the prism constant into account.

3. Measure the distance between Point P and Point Q (PQ).

4. Install a reflector prism on the tripod at Point P.

5. Set up another tripod at Point R, on the line between Point P and Point Q.

6. Transfer the Nivo series instrument to the tripod at Point R.

7. Measure the distance from Point R to Point P (RP), and from Point R to Point Q (RQ).

8. Calculate the difference between the value of PQ and the value of RP + RQ.

9. Move the Nivo series instrument to other points on the line between Point P and Point Q.

10. Repeat Step 5 through Step 9 ten times or so.

11. Calculate the average of all the differences.

    The error range is within 3 mm. If the error is out of range, contact your dealer.

Checking the Laser Pointer

The Nivo series total station uses a red laser beam to a laser pointer. The laser pointer is coaxial with the line of sight of the telescope. If the instrument is well adjusted, the red laser pointer coincides with the line of sight. External influences such as shock or large temperature fluctuations can displace the red laser pointer relative to the line of sight.

Specifications

In this chapter:

- ■ Main Body
- ■ Standard Components
- ■ External Device Connector

Main Body

Telescope

Tube length	125 mm (4.91 in.)
Magnification	30 X
Effective diameter of objective	45 mm (1.77 in.) EDM 50 mm (1.97 in.)
Image	Erect
Field of view	1°20' 2.3 m at 100 m (2.3 ft at 100 ft)
Resolving power	3.0"
Focusing distance	1.5 m to infinity (4.92 ft to infinity)

Measurement range

Distances shorter than 1.5 m (4.92 ft) cannot be measured with this EDM.

Measurement range with no haze, visibility over 40 km (25 miles))	
Prism mode	
Reflector sheet (5 cm x 5 cm)	300 m (984 ft)
Standard prism (1P)	5,000 m (16,400 ft)
Reflectorless mode	
Reference target	300 m (984 ft)

- The target should not receive direct sunlight.

- "Reference target" refers to a white, highly reflective material. (KGC90%)

- The maximum measurement range is 500 m in the reflectorless mode.

Distance precision

Precise mode	
Prism	± (3 + 2 ppm × D) mm (–10 °C to +40 °C)
	± (3 + 3 ppm × D) mm (–20 °C to –10 °C, +40 °C to +50 °C)
Reflectorless	± (3 + 2 ppm × D) mm (–10 °C to +40 °C)
	± (3 + 3 ppm × D) mm (–20 °C to –10 °C, +40 °C to +50 °C)
Normal mode	
Prism	± (10 + 5 ppm × D) mm
Reflectorless	± (10 + 5 ppm × D) mm

Measurement intervals

Measurement intervals may vary with the measuring distance or weather conditions.

For the initial measurement, it may take few more seconds.

Precise mode	
Prism	1.5 sec.
Reflectorless	1.8 sec.
Normal mode	
Prism	0.8 sec.
Reflectorless	1.0 sec.
Prism offset correction	−999 mm to +999 mm (1 mm step)

Angle measurement

Reading system	Absolute encoder
Nivo$^{3.M}$	Diametrical reading on HA
	Single reading on VA
Nivo$^{5.M}$	Single reading on HA/VA
Minimum display increment	
360°	1"/5"/10"
400G	0.2 mgon/1 mgon/2 mgon
MIL6400	0.005 MIL/0.02 MIL/0.05 MIL
DIN18723 accuracy	Nivo$^{3.M}$: 3" / 1.0 mgon
	Nvo$^{5.M}$: 5"/1.5 mgon

Tilt sensor

Method	Liquid-electric detection (Dual axis)
Compensation range	±3'

Tangent screw

Type	Friction clutch endless fine motion

Tribrach

Type	Detachable

Level

Electronic level	Displayed on the LCD
Circular level vial	Sensitivity 10'/2 mm

Optical plummet

Image	Erect
Magnification	3×
Field of view	5°
Focusing range	0.5 m (1.6 ft) to infinity

Optional laser plummet

Wave length	635 nm
Laser class	Class 2
Focusing range	∞
Laser diameter	Approx. 2 mm

Display and keypad

Display type	Graphical LCD
Resolution	128 × 64
Display illumination	Backlight
Keys	25

Connections in the base of instrument

Communications	
Type	RS-232C
Maximum baud rate	38400 bps asynchronous
External power supply input voltage	4.5 V to 5.2 V DC

Battery pack

Output voltage	3.8 V DC rechargeable
Continuous operation time	
Continuous distance/angle measurement	10 hours
Distance/angle measurement every 30 seconds	16 hours
Continuous angle measurement	30 hours

Tested at 25 °C (nominal temperature). Operation times may vary depending on the condition and deterioration of the battery.

Environmental performance

Operating temperature range	−20 °C through +50 °C (−4 °F through +122 °F)
Storage temperature range	−25 °C through +60 °C (−13 °F through +140 °F)

Dimensions

Main unit	149 mm W x 145 mm D x 306 mm H
Carrying case	435 mm W x 206 mm D x 297 mm H

Weight

Main unit w/o battery	3.5 kg (7.95 lbs), approx.
Battery	0.1 kg (0.22 lbs), approx.
Carrying case	2.4 kg (5.28 lbs), approx.
Charger and AC adapter	0.4 kg (0.99 lbs), approx.

Environmental protection

Watertight/dust-proof protection	IP66

Standard Components

- Instrument main body
- Battery pack (X 2)
- Universal charger, power cord, and adapters
- Adjustment pin, Allen wrench
- Objective lens cap
- Vinyl cover
- *Total Station Nivo Series Instruction Manual* (this document)
- Carrying case
- Shoulder strap (X 2)

External Device Connector

This connector can be used to connect to an external power source or to communicate with an external device.

Before using the external device connector, make sure that the external device meets the specifications below.

Input voltage	4.5 V to 5.2 V DC
System	RS-232C
Signal level	±9 V standard
Maximum baud rate	38400 bps asynchronous
Compatible male connector	Hirose HR10A-7P-6P or HR10-7P-6P

⚠ **CAUTION –** Except for the connection shown in Figure 8.1 on page 150, use of this connector is at your own risk.

⚠ **CAUTION –** Use only the male connectors specified above. Using other connectors will damage the instrument.

The external device connector is a Hirose HR 10A-7R-6S female connector. The pinouts for connecting it to an external device connector are shown below:

Pin	Signal	Description
1	RXD	Receive data (Input)
2	TXD	Send data (Output)
3	NC	No connection
4	V	Power
5	GND	Ground
6	NC	No connection
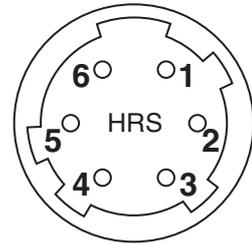

CAUTION – Use only the pin connections shown above. Using other connections will damage the instrument.

CAUTION – The Nivo series total station has different pin assignment from other models of Nikon total station.

To connect to an external power source, supply power to Pin 4 (power terminal) and Pin 5 (ground terminal) on the instrument. The instrument will use the external power source even if the internal battery packs are attached.

CAUTION – Make sure that the power supplied is within the rated input range (4.5 V to 5.2 V DC, 1 A maximum). Power supplied outside this range will damage the instrument.

To communicate with an external device, connect the RS-232C signal from the external device to Pin 1 (input terminal) and to Pin 2 (output terminal) on the instrument.

Cap the data output/external power input connector securely while not in use. The instrument is not watertight if the cap is not attached or not attached securely, and when the data output/external power input connector is in use.

The instrument can be damaged by static electricity from the human body discharged through the data output/external power input connector. Before handling the instrument, touch any other conductive material once to remove static electricity.

System Diagrams

In this chapter:

■ System Components

System Components
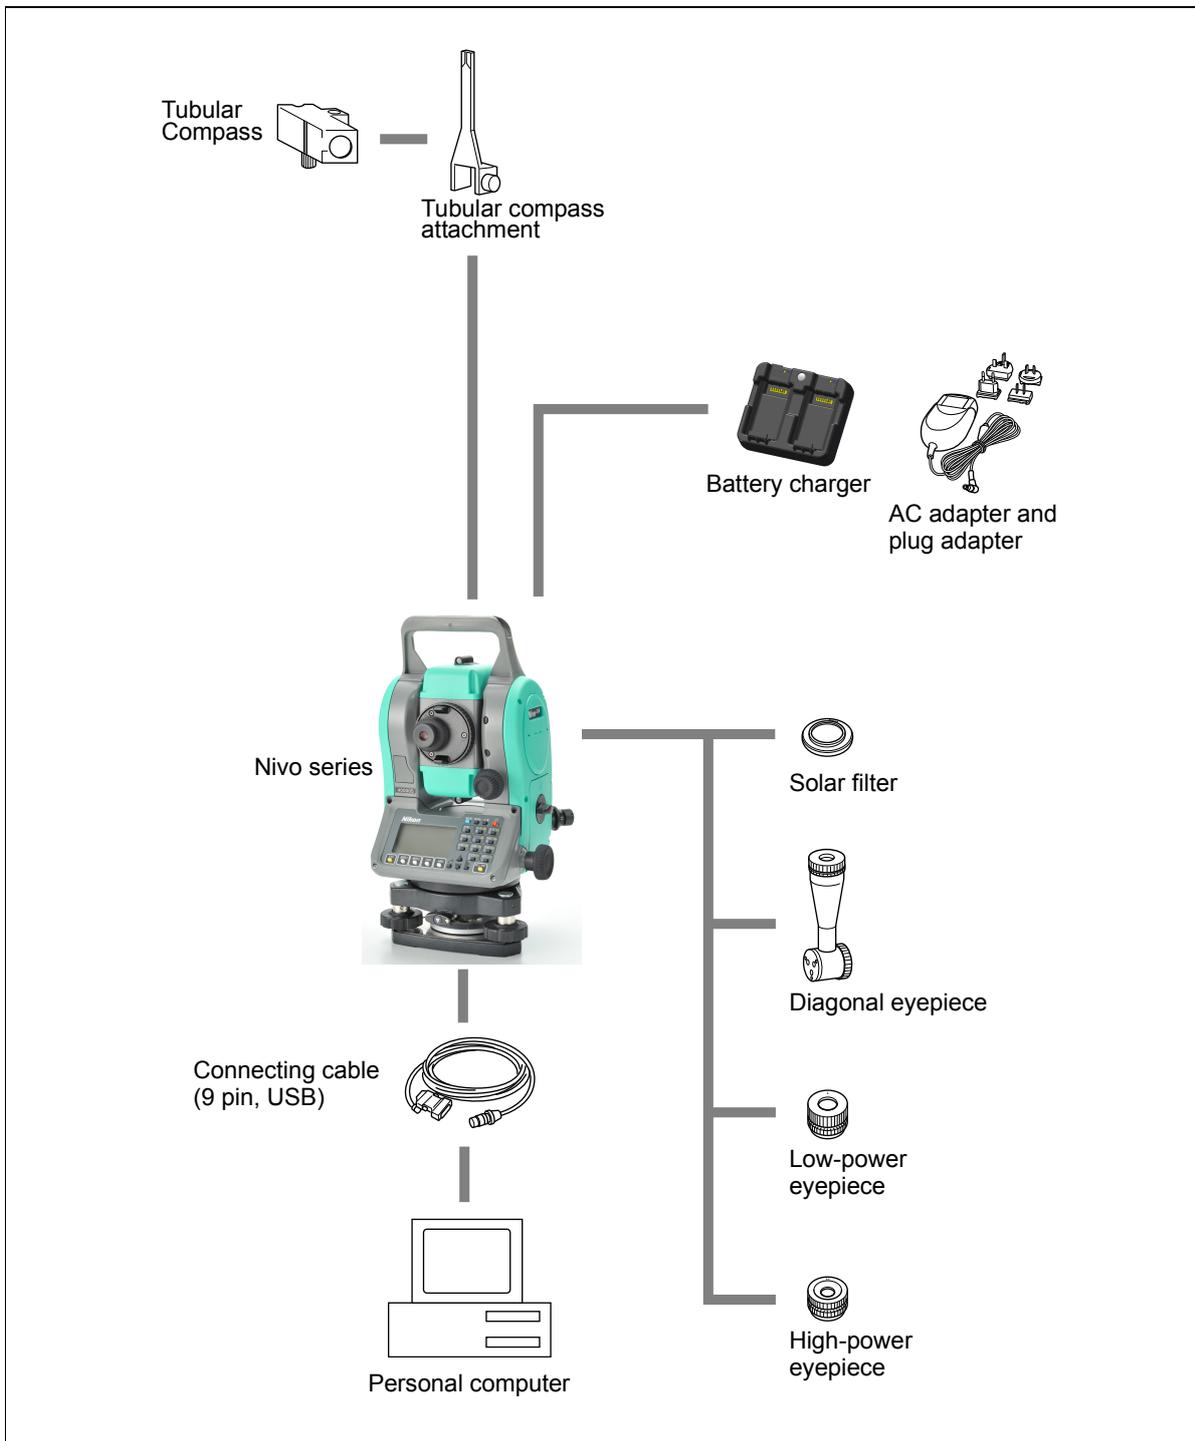

Figure 8.1   Measurement side
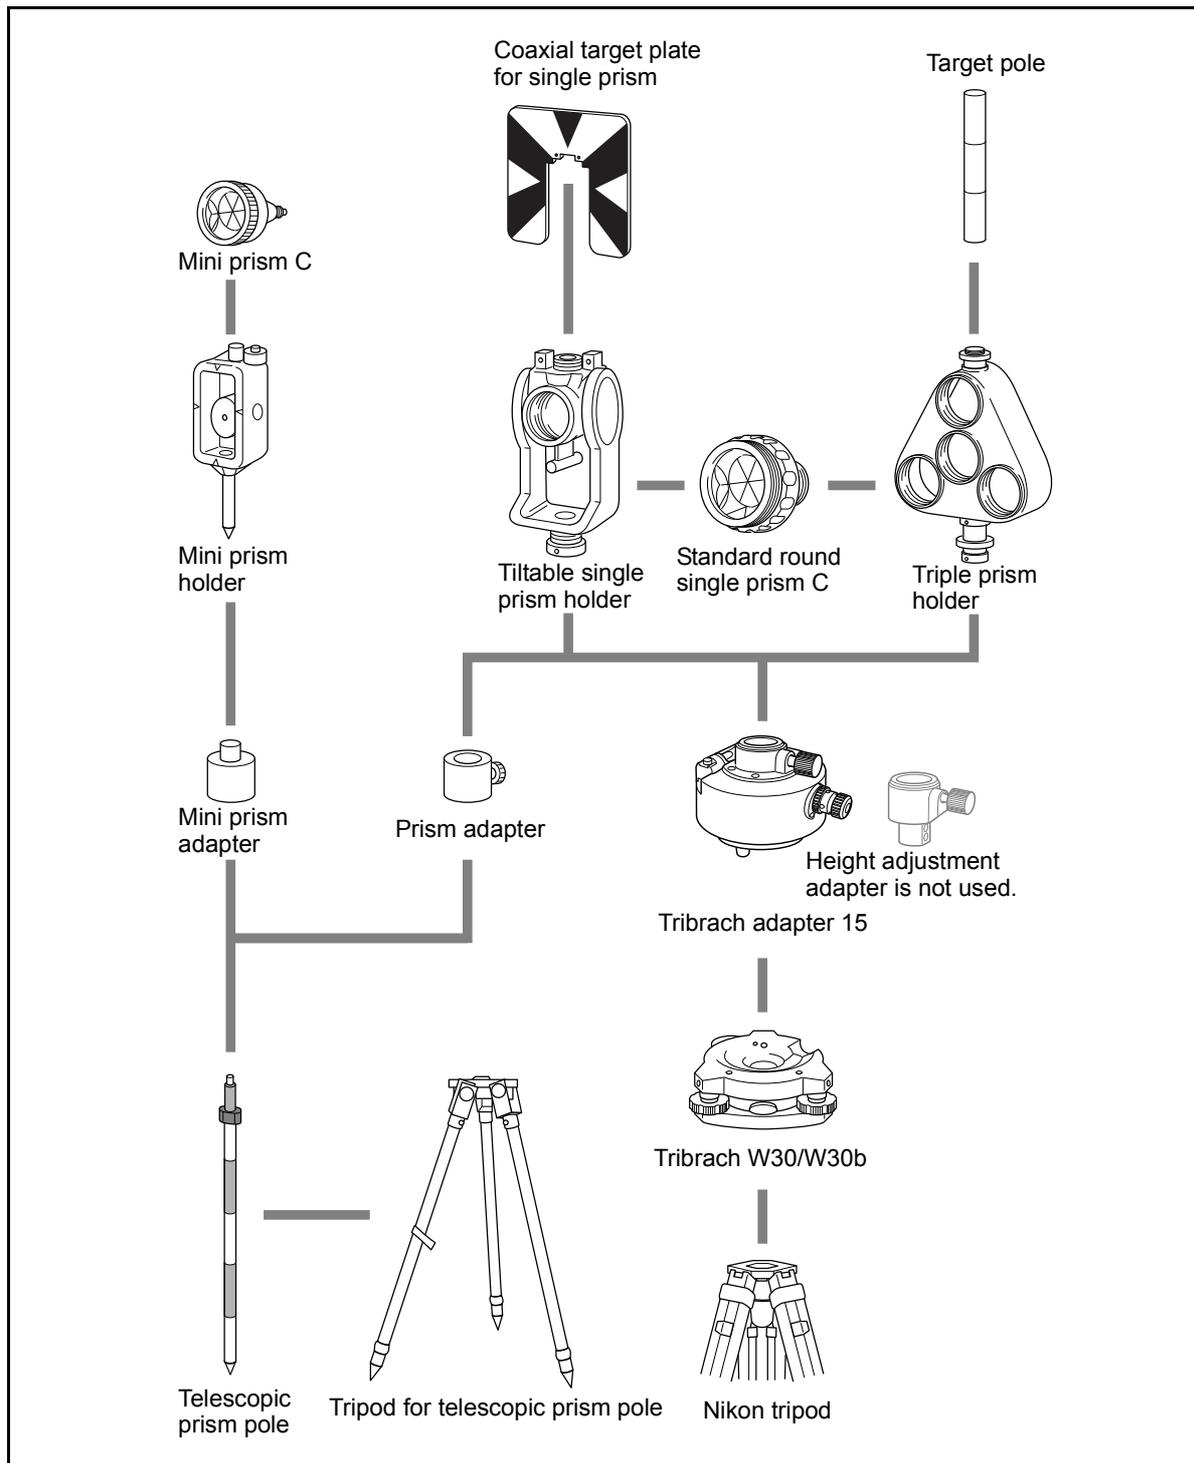

Figure 8.2   Prism reflector side

Note – Nivo series must be used with the Tribrach W30 or W30b.

Communications

In this chapter:

- ■ Uploading Coordinate Data
- ■ Uploading Point Lists and Code Lists
- ■ Downloading Data

Uploading Coordinate Data

Settings

To configure the transmission speed and other settings, go to MENU > Settings > Comm. For more information, see Communications, page 111.

```
<Communication>
 Ext.Comm : NIKON
     Baud : 38400
   Length : 8
   Parity : None
 Stop bit : 1
```

Record format

You can upload coordinate records in the following formats:

| PT | , | X | , | Y | , | Z | , | CD |

| PT | | X | | Y | | Z | | CD |

| PT | , | X | , | Y | , | Z |

| PT | | X | | Y | | Z |

| PT | , | X | , | Y | , | , | CD |

| PT | | X | | Y | | CD |

| PT | , | X | , | Y | , | , |

| PT | , | X | , | Y | , |

| PT | , | , | , | Z | , | CD |

| PT | , | , | , | Z |

The record formats shown above use the following codes:

Code	Description	Length
PT	Point number	Up to 20 digits
X	Actual X coordinate	Variable length
Y	Actual Y coordinate	Variable length
Z	Actual Z coordinate	Variable length
CD	Feature code	Up to 16 characters

Data example

Uploading Point Lists and Code Lists

Settings

To configure the transmission speed and other settings, go to MENU > Settings > Comm. For more information, see Communications, page 111.

```
<Communication>
 Ext.Comm : NIKON
     Baud : 38400
   Length : 8
   Parity : None
 Stop bit : 1
```

File format

PT lists and code lists use the same record format. Use the filenames POINT.LST for a PT list, and CODE.LST for a code list.

```
DEFAULT                          The first line of the file must
{                                contain the text "DEFAULT" in
    String1 , Code1              capital letters.
    Layer2
    {
        String2-1, Code2-1
        String2-2, Code2-2
    }
    Layer3
    {                            Curly brackets { } group items
        Layer 3-1                together under the preceding
        {                        line.
            String3-1-1, Code3-1-1   For example, Layer 3-1
            String3-1-2, Code3-1-2   contains String 3-1-1 and
        }                        String 3-1-2.
        String3-2, Code3-2       Layer 3 contains the five
        String3-3, Code3-3       items from Layer 3-1 to
    }                            String 3-3.
    String4, Code4
    String5, Code5
    String6, Code6
    String7, Code7               "String" represents characters
                                 that are displayed on the
}                                screen. "Code" represents
                                 characters that are stored in
                                 the database.
```

Downloading Data

Settings

To configure the transmission speed and other settings, go to MENU > Settings > Comm. For more information, see Communications, page 111.

Nikon raw record formats

Coordinate records

| type | , | pt | , | (pt id) | , | northing | , | easting | , | elevation | , | code |

type	One of the following codes:
	UP Uploaded point
	MP Manually input point
	CC Calculated coordinate
	RE Resection point
pt	Point number
(pt id)	(Point ID)
northing	Northing of the coordinate
easting	Easting of the coordinate
elevation	Elevation of the coordinate
code	Feature code

Station records

| **ST** | , | stnpt | , | (stnid) | , | bspt | , | (bs id) | , | hi | , | bsazim | , | bsha |

ST	Station record identifier (fixed text)
stnpt	Station point number
(stn id)	(Station ID)
bspt	Backsight point number
(bs id)	(Backsight ID)
hi	Height of instrument
bsazim	Backsight azimuth
bsha	Backsight horizontal angle

Control point records

CP	,	pt	,	(pt id)	,	ht	,	sd	,	ha	,	va	,	time	,	code

CP	Control point record identifier (fixed text)
pt	Point number
(pt id)	(Point ID)
ht	Height of target
sd	Slope distance
ha	Horizontal angle
va	Vertical angle
time	24-hour time stamp
code	Feature code

Sideshot records

SS	,	pt	,	ht	,	sd	,	ha	,	va	,	time	,	code

SS	Sideshot record identifier (fixed text)
pt	Point number
ht	Height of target
sd	Slope distance
ha	Horizontal angle
va	Vertical angle
time	24-hour time stamp
code	Feature code

Stakeout records

SO	,	pt	,	(sopt)	,	ht	,	sd	,	ha	,	va	,	time	,

SO	Stakeout record identifier (fixed text)
pt	Recorded point number
(sopt)	(Original number of point staked)
ht	Height of target
sd	Slope distance
ha	Horizontal angle
va	Vertical angle
time	24-hour time stamp

F1 records

face	,	pt	,	ht	,	sd	,	ha	,	va	,	time

face   One of the following:
            F1   Shot taken using Face-1 (fixed text)
            Shot taken using Face-1 for Station setup (fixed text)
pt   Point number
ht   Height of target
sd   Slope distance
ha   Horizontal angle
va   Vertical angle
time   24-hour time stamp

Comment/note records

CO	,	text

CO   Comment record identifier (fixed text)
text   Comment text

SDR2x and SDR33 record formats

Header record

00NM	ver	0000	datetime	ang	dist	press	temp	coor	1

1–4	**00NM**	Header record identifier (fixed text)
5–20	ver	SDR download version. One of the following:
		SDR20V03-05 SDR2x
		SDR33V04-01 SDR33
21–24	**0000**	Not used
25–40	datetime	Download date and time (in hours and minutes)
41	ang	Angle units. One of the following:
		1 Degrees
		2 Gons
		4 Mils
42	dist	Distance units. One of the following:
		1 Meters
		2 Feet
43	press	Pressure units. One of the following:
		1 mm Hg
		2 In. Hg
		3 hPa
44	temp	Temperature units. One of the following:
		1 Celsius
		2 Fahrenheit
45	coor	Coordinate order. One of the following:
		1 NEZ
		2 ENZ
46	**1**	Not used

Instrument record

01KI1	instr	serNo	Instr	serNo	1	zero VA	0.000	0.000	0.000

1–5	**01KI1**	Instrument record identifier (fixed text)
6–21, 28–43	instr	Instrument make and model
22–27, 44–49	serNo	Instrument serial number
50	**1**	Not used
51	zero VA	The reference point for vertical angles. One of the following:
		1 Zenith
		2 Horizon
52–61,	**0.000**	Not used
62–71,	**0.000**	Not used
72–81,	**0.000**	Not used

Station details record

02KI	stnpt	northing	easting	elevation	hi	desc

1–4	**02KI**	Station details record identifier (fixed text)
5–8 (2x), 5–20 (33)	stnpt	Station point number
9–18 (2x), 21–36 (33)	northing	Northing of station
19–28 (2x), 37–52 (33)	easting	Easting of station
29–38 (2x), 53–68 (33)	elevation	Elevation of station
39–48 (2x), 69–84 (33)	hi	Height of instrument
49–64 (2x), 85–100 (33)	desc	Station description

Target details record

03NM	ht

1–4	**03NM**	Target details record identifier (fixed text)
5–14 (2x), 5–20 (33)	ht	Height of target

Backsight bearing details record

07KI	stnpt	bspt	bsazim	ha

1–4	**07KI**	Backsight bearing details record identifier (fixed text)
5–8 (2x), 5–20 (33)	stnpt	Station point number
9–12 (2x), 21–36 (33)	bspt	Backsight point number
13–22 (2x), 37–52 (33)	bsazim	Backsight azimuth
23–32 (2x), 53–68 (33)	ha	Horizontal angle

Coordinates record

08KI	pt	northing	easting	elevation	desc

1–4	**08KI**	Coordinates record identifier (fixed text)
5–8 (2x), 5–20 (33)	pt	Point number
9–18 (2x), 21–36 (33)	northing	Northing of the coordinate
19–28 (2x), 37–52 (33)	easting	Easting of the coordinate
29–38 (2x), 53–68 (33)	elevation	Elevation of the coordinate
39–54 (2x), 69–84 (33)	desc	Feature code

Observation record

09MC	stnpt	pt	sd	va	ha	desc

1–4	**09MC**	Observation record identifier (fixed text)
5–8 (2x), 5–20 (33)	stnpt	Station point number
9–12 (2x), 21–36 (33)	pt	Observed point number
13–22 (2x), 37–52 (33)	sd	Slope distance
23–32 (2x), 53–68 (33)	va	Vertical angle
33–42 (2x), 69–84 (33)	ha	Horizontal angle
43–58 (2x), 85–100 (33)	desc	Feature code

Job identifier record

10NM	jobid	**1**	incZ	T&Pcorr	C&Rcorr	refcon	sealev

1–4	**10NM**	Job identifier record ID (fixed text)
5–8 (2x), 5–20 (33)	jobid	Job name/title

> *Note* – *The following fields occur only in SDR33 format.*

21	**1**	Point ID length option
22	incZ	2D or 3D coordinates. One of the following:
		1 2D
		2 3D
23	T&Pcorr	Atmospheric correction. One of the following:
		1 Off
		2 On
24	C&Rcorr	Curvature and refraction correction. One of the following:
		1 Off
		2 On
25	refcon	Refraction constant. One of the following:
		1 0.132
		2 0.200
26	sealev	Sea level correction. One of the following:
		1 Off
		2 On

Note record

13NM	note

1–4	**13NM**	Note record ID (fixed text)
5–64	note	Note text

Error Messages

In this chapter:

- Cogo
- Communications
- Data
- Job Manager
- Programs
- Recording Data
- Searching
- Settings
- Stakeout
- Station Setup
- System Error

Cogo

`NO Result`

The system was unable to calculate an area because points were not entered in the correct order.

Press any key to return to the Cogo menu. Then enter the points in the correct order.

`Same Coordinate`

The point or coordinate that you entered is identical to the previous input point.

Press any key to return to the point input screen. Then use a different point.

`XY-coordinate is required`

The input point does not have XY (NE) coordinates.

Press any key to return to the point input screen. Then enter a point that has X and Y coordinates.

Communications

If an error is detected during uploading of data, the Nivo instrument aborts the upload process and displays one of the following messages.

`Check Data`

There are errors in the uploaded data. The uploaded data contains errors, such as an alphabetic character in a coordinate field.

Press any key. Then check the specified line in the data.

`DUPLICATE PT`

The uploaded data contains a duplicate PT.

Press any key. Then check the specified point in the data.

Tip – If the existing point is a UP, CC, or MP record, and is not referred by ST or BS, then it will be overwritten by the uploaded record. No error message appears.

`PT MAX20 chars`

The uploaded data contains a PT with a name or number that is longer than 20 digits.

Press any key. Then check the specified line in the data.

`XYZ OVERRANGE`

The uploaded data contains a coordinate that is longer than 13 digits.

Press any key. Then check the specified line in the data.

Data

`Can't Edit Current ST`

You have tried to edit the current ST.

Note – You cannot edit the current ST. However, old ST records can be edited. No recalculation can be performed on the instrument.

Press any key to return to the code/layer name input screen.

`Can't Edit ST/BS refer to this PT`

You have tried to edit a coordinate that the current ST or BS refers to. You cannot change a coordinate if the current ST or BS refers to it.

Press any key to return to the Data view screen.

`Can't Edit XYZ from measurement`

You have tried to change the coordinates of an SO, SS, or CP record. You cannot change the coordinates of an SO, SS, or CP record.

Press any key to return to the previous screen.

`DELETE Stn-XYZ`

You have tried to delete a coordinate record that the current ST or BS refers to. You must confirm that you want to delete a coordinate record that the current ST or BS refers to.

To ...	Press ...
delete XYZ	the `DEL` softkey
return to the previous screen without deleting XYZ	[ESC] or the `Abrt` softkey

Job Manager

Cannot Assign

You have tried to set the current job as the control file.

Press any key to return to the previous screen. Then select a different job.

Can't Create

There is no space available to create a job or record a point.

Press any key to return to the Job Manager. Then use the DEL softkey to delete old jobs.

Existing Job

You have entered an existing job name for a new job.

Press any key and then change the name for the new job.

MAX 32Jobs

You are trying to create a new job when the maximum number of jobs (32) is already stored.

Press any key to return to the Job Manager. Then use the DEL softkey to delete old jobs.

Programs

NO Stn Setup

You did not perform a station setup or BS check before entering the Programs function.

To ...	Press ...
go to the Stn Setup menu	② or select Stn Setup
return to the BMS	ESC
go to the Programs menu	① or select Continue

Tip – Selecting Continue does *not* resume the last ST record. You should only use the Continue option if you are sure that the previous ST coordinates and the current HA orientation are correct. Otherwise, records in the Programs function may not be correct.

XY&Z coordinate are required

Three-dimensional coordinates are required in S-Plane function.

Press any key to return to the point input screen. Then enter a three-dimensional point.

Recording Data

DATA FULL

The data storage is full.

Press any key to return to the Basic Measurement Screen (BMS). Then:

To ...	Go to ...
delete unnecessary data	MENU > Data
delete jobs	MENU > Job

DUPLICATE PT

The input PT you are trying to record already exists in the current job. An existing coordinate record cannot be overwritten by measured data.

Press any key to return to the point input screen. Change PT.

Duplicate PT

The input PT you are trying to record already exists in the current job as an SS, SO, or CP record. An existing SS, SO, or CP record can be overwritten by measured data.

To ...	Press ...
return to the PT input screen	[ESC] or the Abrt softkey
record RAW data and update XYZ data	the XYZ softkey
record RAW data only	the RAW softkey

No Open Job

No job is open.

To ...	Press ...
open the job list, if there are existing jobs	[1] or select Select job
create a new job	[2] or select Create job
return to the previous screen	[ESC]

NO Stn Setup

There is no station record in the current job, or a station setup or BS check has not been done since the program was rebooted.

To ...	Press ...
continue recording	[1] or select Continue. If there is already an ST record in the job, the message CO, Use current orientation appears.
go to the Stn Setup menu	[2] or select STN Setup
return to the previous screen	[ESC]

OVER RANGE

You are trying to record a coordinate with more than 13 digits

Press any key to return to the previous screen. Then check the current ST coordinate.

Searching

PT Not Found

There is no point that matches the criteria you entered.

Press any key to return to the point input screen.

This message may appear in any function where the PT/CD is input, such as Station Setup or Stakeout.

Settings

Job Settings will be changed

You have changed one or more of the following job settings:

- VA zero or HA in the Angle screen (see Angle, page 108)

- Scale, T-P, Sea Lvl, or C&R in the Distance screen (see Distance, page 109)

- Coord or Az Zero in the Coordinates screen (see Coordinate, page 110)

- Angle, Dist, Temp, or Press in the Unit screen (see Unit, page 111)

To ...	Press ...
discard the changes to the job settings	[ESC] or the Abrt softkey. The current job remains open.
close the current job and save the changes to the job settings	[ENT] or the OK softkey

Note – To record a point using the new settings, create a new job using the new settings.

Stakeout

Input Error

The point name style used in the Fr field is not the same as the style used in the To field. For example, the Fr field style is 1, and the To field style is A200.

Press any key to return to the Fr/To input screen. Then re-enter the point name, using the same naming style in both fields.

`NO Stn Setup`

You did not perform a station setup or BS check before entering the Stakeout function.

To...	Press ...
go to the Stn Setup menu	[2] or select `Stn Setup`
return to the Basic Measurement Screen (BMS)	[ESC]
go to the Stakeout menu	[1] or select `Continue`

Tip – Selecting `Continue` does *not* resume the last ST record. You should only use the `Continue` option if you are sure that the previous ST coordinates and the current HA orientation are correct. Otherwise, records in the Stakeout function may not be correct.

Station Setup

`Calc ST Failed Need additional PT`

Calculating ST failed in resection. This message may appear after you have deleted a point the View shots screen.

Press any key to return to the PT input screen. Take another shot to calculate the ST coordinate.

`Same Coordinate`

The input PT or coordinate is identical to the current station in STN/1:Known, or the same coordinate or point name/number is found in Resection.

Press any key to return to the PT input screen. Then use a different PT.

`Space LOW`

There is not enough space to record a station when you start any of the Station Setup functions.

To ...	Press ...
return to the BMS	press [ESC] or the `Abrt` softkey. Use the `DEL` softkey in Job Manager to delete old jobs.
continue	press [ENT] or the `OK` softkey. You may not be able to record the whole process.

`XY-coordinate is required`

The input point for ST/BS does not have N/E coordinates.

Press any key to return to the PT input screen. Then use a PT that has N/E coordinates.

`Z-coordinate is required`

The input point for Benchmark does not have a Z coordinate.

Press any key to return to the PT input screen. Then use a PT that has a Z coordinate.

System Error

`=SYSTEM ERROR=`

The system has detected an internal error that is related to the lower-level system.

Press any key to turn the instrument off. The system will reboot when this error is reported. If you still have more points to shoot in the site, turn the instrument on and repeat the open a job and station setup procedures.

Data stored before this error will be kept safely in the Job file.

If the error appears frequently, please contact your dealer or Trimble Support and report the message that appears below the `=SYSTEM ERROR=` line.
