Simply starting the Carlson program on a workstation will not trigger the request for a license file. A series of commands must be run within the program before a request is sent out to the server.

A faster way to trigger a response from the license manager is to click on one of the Carlson menu icons found in the menu toolbar of the Carlson program.

Each of these icons will send a request for the specific module it is associated with. Keep in mind that only the modules installed will trigger a request.

Here are the Carlson menu icons, working from left to right in the menu toolbar:

Survey

Civil

Hydrology

GIS

Takeoff

Construction

Field

Natural Regrade

Point Cloud

Basic Mining

Geology

Underground Mining

Surface Mining

AutoCAD

Carlson Software Inc.

Fax: (606) 564-6422

To view the current available count of licenses on the server, you can run the WLMAdmin.exe from within the Carlson LMTools X.X.X folder.

A   Click on the + beside Subnet Servers to show all servers on the subnet.
B   Click the + beside the Server Name to show the modules licensed to this server.
C   Click on the module of your choice to highlight it.
D   The total number of licenses, as well as those in use, can be found under Feature information.
E   To see which user is has a particular license; click on the + beside the module name. Then, click on the + beside the Clients folder.
